

.2 MESSAGE TOLL TELEPHONE SERVICE

A. TOLL RATE GUIDE GENERAL RATE REGULATIONS

1. Description

This schedule contains the general rate regulations governing the use of the Toll Rate Guide material.

2. Regulations

The information contained in Toll Rate Guide for the State of California B. following, is used in conjunction with other rate quoting material to determine rates and charges.

- a. The Toll Rate Guide schedule contains lists of rate centers, localities and central offices, hereinafter generally referred to as "points", within the State of California with V-H (vertical and horizontal) coordinates for use in determining airline mileages for message toll telephone service, secretarial line service, foreign exchange and foreign district area service and wide area telephone service available over the lines of the Company and of the companies with which it connects.

2. MESSAGE TOLL TELEPHONE SERVICE (cont'd)

A. TOLL RATE GUIDE GENERAL RATE REGULATIONS (cont'd)

2. Regulations (cont'd)

b. The material is arranged as follows:

- (1) Rate Centers, including toll stations, are listed alphabetically in B.1. following. The symbol "ts" associated with a rate center listed indicates toll station service.
- (2) Localities are listed alphabetically in B.2. following, and cross-referenced to the rate center with which they are associated.
- (3) Central Offices are listed numerically by NPA (Numbering Plan Area) in B.3. following, and cross referenced to the rate center with which they are associated.
- (4) Local Access and Transport Areas are listed numerically in B.4. following.

c. The columns headed "LATA", "NPA" and "Central Office" in B.1. following, contain the local access and transport area, numbering plan area and central office codes for each rate center.

d. The columns headed "V" and "H" in B.1. following, contain the vertical and horizontal coordinates for each rate center.

e. The column headed "ID" in B.1. following, contains an identifier when the vertical and horizontal coordinates are to be used only for a particular type of service.

2. MESSAGE TOLL TELEPHONE SERVICE (cont'd)
A. TOLL RATE GUIDE GENERAL RATE REGULATIONS (cont'd)

3. Basis For V-H Coordinates

For the purpose of determining airline mileages, vertical and horizontal grid lines have been established across the United States. The spacing between adjacent vertical grid lines and between horizontal grid lines represents a distance of one coordinate unit. This unit is the square root of 0.1, expressed in statute miles. A four-digit vertical (V) and a four-digit horizontal (H) coordinate is computed for each rate center from its latitude and longitude location by use of appropriate map-projection equations. A pair of V-H coordinates locates a rate center, for determining airline mileages, at a particular intersection of an established vertical grid line with an established horizontal grid line. The distance between any two rate centers is the airline mileage computed as explained in 4., following.

To determine the V-H coordinates for a point refer to B. following. Look for the point in the column headed "Exchange-Rate Center" in B.1. following. If the point is not listed, look for the name in the column headed "Locality" in B.2. following, determine the rate center and locate the latter in B.1. following. Central office codes listed in B.3. following may also be used to determine rate centers for use in determining rate distances for message toll service.

4. Determination of Airline Mileages

To determine the rate distance between any two rate centers proceed as follows:

Step 1. Obtain the "V" and "H" coordinates for each rate center.

Step 2. Obtain the difference between the "V" coordinates of the two rate centers. Obtain the difference between the "H" coordinates.

The difference is always obtained by subtracting the smaller coordinate from the larger coordinate.

Step 3. Divide each of the differences obtained in Step 2. by three, rounding each quotient to the nearer integer.

- 2. MESSAGE TOLL TELEPHONE SERVICE (cont'd)
 - A. TOLL RATE GUIDE GENERAL RATE REGULATIONS (cont'd)
 - 4. Determination of Airline Mileages (cont'd)

Step 4. Square these two integers and add the two squares.

If the sum of the squares is greater than 1777, divide the integers obtained in Step 3. by three and repeat Step 4. Repeat this process until the sum of the squares obtained in Step 4. is less than 1778.

Step 5. The number of successive divisions by three in Steps 3. and 4. determines the value of "N". Multiply the final sum of the two squares obtained in Step 4. by the multiplier specified in the following table for this value of "N" preceding:

N	MULTIPLIER	MINIMUM RATE MILEAGE
1	0.9	-
2	8.1	41
3	72.9	121
4	656.1	361

Step 6. Obtain square root of product in Step 5. and, with any resulting fraction, round up to next higher integer. This is the message rate mileage except that when the mileage so obtained is less than the minimum rate mileage shown in Step 5., the minimum rate mileage corresponding to the "N" value is applicable.

Example:

The message rate distance is required between Los Angeles and San Francisco.

		V	H
Step 1.	Los Angeles	9213	7878
	San Francisco	<u>8492</u>	<u>8719</u>
Step 2.	difference	721	841
Step 3a.	dividing each difference by three and rounding to nearer integer = 240 and 280		

2. MESSAGE TOLL TELEPHONE SERVICE (cont'd)
A. TOLL RATE GUIDE GENERAL RATE REGULATIONS (cont'd)
4. Determination of Airline Mileages (cont'd)

Example: (cont'd)

Step 4a.	squaring integers and adding,	$240 \times 240 =$	57,600
		$280 \times 280 =$	<u>78,400</u>
	sum of squared integers		136,000

sum of squared integers is greater than 1777, so divide integers in Step 3a. by three and repeat Step 4a.

Step 3b. dividing integers in Step 3a. by three and rounding = 80 and 93

Step 4b.	squaring integers and adding,	$80 \times 80 =$	6,400
		$93 \times 93 =$	<u>8,649</u>
	sum of squared integers		15,049

sum of squared integers is greater than 1777, so divide integers in Step 3b. by three and repeat Step 4b.

Step 3c. dividing integers in Step 3b. by three and rounding = 27 and 31

Step 4c.	squaring integers and adding,	$27 \times 27 =$	729
		$31 \times 31 =$	<u>961</u>
	sum of squared integers		1,690

This sum of squared integers is less than 1778 and was obtained after three successive divisions by three; therefore, "N" = 3.

Step 5.	Multiply final sum of squared integers by	1,690	
	factor 72.9 (corresponding to "N" = 3)		<u>x 72.9</u>
			= 123,201.0

Step 6. Square root of 123,201 = 351 miles. The 351 miles is larger than the minimum of 121 rate miles applicable when "N" = 3, so the message rate mileage is 351 miles.
