

NON-ELECTRIC CONCENTRATOR - IDENTIFIER EQUIPMENT /ST3/

General

Non-Electric Concentrator-Identifier Equipment consists of a Concentrator located in a Central Office and an Identifier associated with an Answering Switchboard, connected by a Type 2043 Local Channel. Patron Lines and patrons' main line telephone services terminated in the Concentrator are answered by the switchboard attendant in the same manner as if they were terminated directly in the switchboard via discrete facilities. Use of Non-Electric Concentrator-Identifier equipment may be especially advantageous where a number of Patron Lines would otherwise transcend Central Offices boundaries if discrete facilities were to be provided.
