Note 1: Rounded to nearest 1000 access lines per service feature (excluding WATS terminations). This count is based upon the number of access lines in service at the time service is established. The count will be adjusted annually for purposes of updating customer billing. All non-Bell lines, including wireless pseudo-ANI (P-ANIs), will be grouped together and rounded to the nearest 1,000 access lines for billing purposes. For each Service Feature, where the count of access lines has been adjusted upward, for each 1000 access lines so adjusted (after rounding) only the monthly rate will apply. For purposes of counting access lines for Wireless Carriers, the quantity of pseudo-ANI records will be used in lieu of access lines. Pseudo-ANIs will be counted for each Emergency Communications District (ECD) which they serve and will not be aggregated between multiple ECDs.

Note 2: This rate applies to Independent Company, other Local Exchange Company, or Wireless Carrier access lines located within the E911 subscriber's jurisdiction where the subscriber selects a full-featured system (E8Z).

Note 3: This rate applies to Independent Company, other Local Exchange Company, or Wireless Carrier access lines located outside the subscriber's jurisdiction where the subscriber selects a full-featured system (E8Z).

Note 4: Enhanced Multi-Frequency Signaling (EMFS) is required per PSAP on all tandem-to-PSAP trunk groups when five or more NPAs (area codes) are resident in one of the 911 tandems serving the PSAP. EMFS delivers ten digits of ANI that includes the 3-digit NPA and the 7-digit telephone number.
