- C. Conditioning (Voice Grade Services)
  - Conditioning provides more specific transmission characteristics for data services. There are two types of C-conditioning 1. and one type of D-conditioning, each with different technical specifications. C-Type conditioning controls attenuation distortion and envelope delay distortion. D-Type conditioning controls the signal to C-notched noise ratio and intermodulation distortion.

Conditioning is charged for on a per Local Channel basis for two-point and multipoint service. For two-point services the parameters apply to each service. For multipoint services the parameters apply to any path between any two service points.

2. The types and description of the available conditioning options are as follows:

Type Conditioning	Frequency Response Specification	Envelope Delay I Specification	Distortion
C1 (two-point or multipoint)	300-2700 Hz,	1000-2400 Hz, les	SS
	-2dB to $+6$ dB.	than 1000 microse	econds
	1000-2400 Hz,		
	-1dB to $+3$ dB.

D1 (two-point)	Noise level 28dB	35dB below	40dB below

When a channel is equipped with Type D1 conditioning and is utilized for voice communications, the Company does not 3. undertake to represent that the channel will be suitable for such voice transmission. • •
