C.	Conditioning (Voice Grade Se	rvices)	\

1. Conditioning provides more specific transmission characteristics for data services. There are two types of C conditioning and one type of D-conditioning, each with different technical specifications. C-Type conditioning controls attenuation distortion and envelope delay distortion. D-Type conditioning controls the signal to C-notched noise ratio and intermodulation distortion.

Conditioning is charged for on a per Local Channel basis for two-point and multipoint service. For two-point services the parameters apply to any path between any two service points.

2. The types and description of the available conditioning options are as follows:

Type Conditioning	Frequency Response Specification	Envelope Dela Specification	y Distortion
C1 (two-point or multipoint)	300-2700 Hz,	1000-2400 Hz,	less
	-2dB to $+6dB$ .	than 1000 micro	oseconds
