A142. OBSOLETE SERVICE OFFERINGS - INTEGRATED SERVICES DIGITAL NETWORK (ISDN)

A142.1 ISDN - Business Service (IBS) (Pre-1998)

(T) (T)

(Obsoleted 04-30-98 Type 4) Service rates in this section are available for existing lines at existing locations only. Not available for new service, additions to existing service or moves of existing service to new location. Moves of existing service can be made through October 31, 1998. Moves after that date will be in accordance with Terms and Conditions of Section *A142.4*.

Obsolescence Rules

- 1. Inward activity for ISDN Business Service in this section of the Guidebook will not be allowed except that features may be added or deleted on existing lines at their current location.
- 2. Existing ISDN Business Service subscribers will be allowed to maintain their ISDN Business Service at their current location until the expiration date of their Term Payment Plan. Upon expiration of their Term Payment Plan subscribers must either, 1) convert to the month to month rate for ISDN Business Service; or 2) subscribe to an alternate service.
- 3. ISDN Business Service subscribers upon moving to a new location must either 1) convert to the Flat Rate Threshold Pricing Plan for ISDN Business Service; or 2) subscribe to an alternate service.
- 4. Nonrecurring charges will not apply for conversion of ISDN Business Service subscribers to the Flat Rate Threshold Pricing
- 5. Existing ISDN Business Service subscribers will reference Section A142.4.1. for Interoffice Circuits and Optional Features.

A142.1.1 General

A. The definitions, terms and conditions in *A142.4.1*. will apply to these offerings except as stated following:

(T)

Rate Stability

(T)

B. Service will be allowed as Flat Rate or Measured Rate as indicated in this section of the guidebook. Usage rates as appropriate are specified in Section A3.

A142.1.2. Rates and Charges

A142.1 ISDN - Business Service (IBS) (Pre-1998) (Cont'd)

(T)

(M)

F. IRS will consist of the following components:

- Basic Rate Digital Subscriber Line (DSL) Access

(T)(O)

(O)

(O)

(O)

AL-15-0102 EFFECTIVE: December 15, 2015

A142. OBSOLETE SERVICE OFFERINGS - INTEGRATED SERVICES DIGITAL NETWORK (ISDN)

A142.2 ISDN – Residence Service (IRS) (T) Effective December 15, 2015, ISDN - Residence Service (IRS) is obsoleted. IRS will not be available for new service, additions or (N) changes to existing service, or moves of existing service to a new location. Customers may retain the service for existing IRS lines at existing locations. (T)(O) A142.2.1 General A. Effective April 30, 1998 ISDN - Residence Service (IRS) will be offered only under a Flat Rate Threshold Pricing Plan or a (O) Usage Option Plan. The Flat Rate Threshold Pricing Plan allows up to 200 hours of use each month per DSL at the flat rate. Minutes of use (O) rates will apply for all usage above the 200 hours. Usage Option Plans will be available for various levels of use only on National ISDN lines. Usage under these plans (O)will be recorded on outward usage for calls within the LATA. The Basic Local Calling Area for the Optional Usage Plans will be the LATA boundary. Minutes of use rates will apply for originating local usage above the allowance as indicated in the Usage Option Plan selected. Monthly usage charges within the Basic Local Calling Area will be capped as indicated. Rates Stability Plans are not available for use with Usage Option Plans. (O)a. Usage Option Plan A - Includes 60 hours (3600 minutes) of usage per DSL per month. Usage Cap of \$245 per (O) DSL per month. Only one Usage Plan A will be allowed per premise, per billing account or per earning account. Usage Option Plan B - Includes 120 hours (7,200 minutes) of usage per DSL per month. Usage Cap of \$220 per DSL per month. Usage Option Plan C - Includes 240 hours (14,400) minutes) of usage per DSL per month. Usage Cap of \$195 per (O)DSL per month. Usage Option Plan D - Includes 800 hours (48,000 minutes) of usage per DSL per month. Usage Cap of \$110 per (O) DSL per month. Usage Option Plan E - Unlimited usage. (O) The following stipulations apply only when the IRS line from which the call originates subscribes to a Usage Option (O)Calls completed with operator assistance within the Basic Local Calling Area will be rated at the Usage Option Plan (O) usage charges in addition to the appropriate Operator Assisted Local Call surcharges. Such calls are itemized on the subscriber's billing statement and are billed outside any applicable usage allowances or caps. All IRS lines at a customer's premise must be on the same type Plan, i.e., all Usage Plan A's, Threshold, etc. Hunting between (O)various types of plans will not be allowed. A minimum service period of three months will be required on the IRS lines whether established under a Flat Rate Threshold (O) Pricing Plan or a Usage Option Plan. Termination Charges will apply if the subscriber terminates or disconnects the service prior to fulfilling the three months period. ISDN - Residence Service (IRS) is a new intraLATA group of offerings supported by the Integrated Services Digital Network (O) (ISDN) architecture. IRS supports simultaneous transmission of voice, data, and packet services on the same exchange access line. Calling/Called Number Delivery, Calling Name Delivery, and Call Hold are included with this service. IRS provides a new method of access to the telephone network called Basic Rate Access. Basic Rate Access will consist of the (O) ability to access up to two 64 Kbps (B) channels and one 16 Kbps (D) channel at the service delivery point. IRS is provided through Basic Rate Access. Features are available to increase the capability of the Bearer Alternative Service (O) and may be subscribed to on an as-needed basis. B channel circuit switched services offer up to 64 Kbps intra-office transmission of voice or data. This option permits the (O)customer to utilize either circuit voice or data transmission paths on a per call selection basis. Transmission on the B channel will be circuit switched at 64 Kbps within the switch and/or equipped facilities between ISDN compatible central offices. ISDN interconnection to non-ISDN equipped central offices will be potentially subjected to analog transmission or sub-rated to 56 Kbps. This option includes one directory number (DN).

- Two B channels CSV/CSD. A maximum of two simultaneous B channels can be in use per Basic Rate Access.

- Minimum of one and maximum of eight User Profiles per Basic Rate Digital Subscriber Line (DSL) Access Arrangement.

A142. OBSOLETE SERVICE OFFERINGS - INTEGRATED SERVICES DIGITAL NETWORK (ISDN)

A142.	2 ISDN - Residence Service (IRS) (Cont'd)	(T)
A142	.2.2 Terms and Conditions	(T)(O)
Α.	Customer Premises Equipment (CPE) that is compatible with the ISDN Interface is the responsibility of the user for provisioning.	(O)
В.	The Company will be responsible for publishing and maintaining ISDN Interface Specifications.	(O)
C.	The Company shall not be responsible if changes in any of the equipment, operations, or procedures of the Company utilized in the provision of Basic Rate Access render any facilities provided by the customer obsolete or require modification or alteration of such equipment or system, or otherwise affect its use or performance.	(O)
D.	Suspension of service is not allowed.	(O)
Ε.	Service Charges in Section A4. are applicable per Basic Rate DSL access in addition to rates and charges following.	(O)
F.	Installation charges in A42.1 will be waived for ISDN Residence Service customers transferring existing service to ISDN Business Service. Appropriate installation charges will be charged for any additions to the service completed at the time of transfer.	(O)
G.	Usage rates will apply for all local usage minutes over the 200 hours allowed under the Flat Rate Threshold Plan or the Usage Option Plans. Usage rates will apply for total local usage minutes over the minutes allowed under Usage Option Plans A, B, C or D. Usage rates, as appropriate, are specified in this Section.	(O)
Н.	IRS will be available where central office and outside plant facilities permit.	(O)
I.	IRS served from a central office other than the central office the subscriber would normally be served from will require interoffice facilities as provided in this Section per DSL. Any non-ISDN interoffice facilities connecting to this service will follow the terms and conditions in Section A9.	(O)
	Existing customers may convert to the Interoffice Circuits in this Section or they may continue to pay rates for interoffice facilities from Section A9. until they make changes or additions. Existing customers choosing to convert interoffice facilities will not be charged the installation charge for Interoffice Circuits. Appropriate charges from Section A4. are also not applicable for these conversions. Any changes or additions completed at the time of conversion will be charged the appropriate Installation charges. When the customer requests changes or additions to existing interoffice facilities, they must subscribe to the Interoffice Circuits from this Section.	(O)
	At the Company's option, when the normal serving central office is not equipped for ISDN, a customer may be served with ISDN from another central office. IRS customers to be served under this arrangement must sign an agreement the service will be moved back to his normal serving central office and to a probable number change when/if that office is equipped with ISDN. When the Company elects this serving arrangement, the interoffice charges will not apply. Should the customer request to be served from an ISDN equipped central office other than the normal serving central office, the appropriate interoffice or interexchange charges will apply.	(O)
J.	Each ISDN Basic Rate DSL Access Arrangement will be counted as one line in determining the application of the Service Charges specified in A4. and the End User Charges as specified in the End User Common Access Service section of BellSouth Telecommunications, Inc., FCC No. 1., Section 4.	(T)(O)
A142	.2.3 Definitions	(T)(O)
	B CHANNEL	(O)
	A bidirectional synchronous channel capable of supporting 64 Kbps of digital transmission. D CHANNEL	(O) (O)
	A 16 Kbps digital signaling channel also capable of supporting 9.6 Kbps of packet information for the Basic Rate Interface. 64 KBPS CLEAR CHANNEL CAPACITY (CCC)	(O) (O)
	A B channel connection that provides end-to-end digital connection in which all 64 Kbps of bandwidth are available for customer use.	(O)

A142. OBSOLETE SERVICE OFFERINGS - INTEGRATED SERVICES DIGITAL NETWORK (ISDN)

A142.	2 ISDN	I - Residence Service (IRS) (Cont'd)	(T)(O)						
A142.2.5 Optional Features									
	Deliver capabili	ers are required to subscribe to ISDN - Residence Service (IRS) before ordering these features. Calling/Called Number y, Calling Name Delivery, and Call Hold are provided with this service. Features are available to increase the ty of IRS and may be subscribed to on an as needed basis. Availability of features are limited to where facilities permit y be limited by central office type and switch load.	(O)						
	Where facilities permit, Call Forwarding features will provide for one calling path. Up to nine (9) additional call forwarding paths may be added with a monthly charge per calling path.								
A.	Optiona	l Features	(O)						
		ility of features as described in 1. and 2. following is dependent upon whether the central office is equipped with ISDN or National ISDN.	(O)						
	Th	eatures for use with Electronic Key Telephone Service (EKTS): his option provides a group of features that increase the user's voice terminal flexibility and offers the functionality of a system to groups of users with EKTS equipment.	(O) (O)						
	a.	Shared Primary DN - This is a primary DN that appears on one or more terminals.	(O)						
	b.	Secondary-Only DN - This is a secondary DN that appears on one or more terminals, but is not the primary DN on any of those terminals.	(O)						
	c.	Shared Secondary-Only DN - First Appearance - the first appearance of a secondary DN that appears on more than one terminal but is not the primary DN on any of those terminals.	(O)						
	d.	Key Short Hunt – This feature enhances call coverage by delivering key-set DN Short Hunt Capability to standard-feature ISDN Voice terminals.	(O)						
	e.	Shared Non-ISDN DN - This feature allows call coverage for an analog set. This service allowed only if ISDN and Non-ISDN account owned by same customer and where facilities permit.	(O)						
	f.	Privacy Release - This is a privacy feature that allows a customer to specify, on an EKTS group basis, that no other user can bridge on to calls. On a call by call basis, this feature can be disabled to allow bridging to occur.	(O)						
	g.	Manual Exclusion - This is the opposite of Privacy Release. On a call by call basis the user can restrict bridging.	(O)						
	h.	EKTS Intercom Calling - Dial - This feature allows an EKTS user to call other terminals in the EKTS group with one or two-digit dialing.	(O)						
	i.	EKTS Intercom Calling - Automatic - This feature allows an EKTS user to call another terminal in the EKTS group by activating a button on the EKTS set.	(O)						
	j.	EKTS Intercom Calling - Call Appearance. This feature allows EKTS Intercom Calling to be provisioned on a Call Appearance.	(O)						
	k.	Conference, Drop, Hold, Transfer - EKTS	(O)						
		- Conference - This feature allows the user to add a third party to an existing conversation. This feature is for use with voice calls only.	(O)						
		- Drop - This central office based feature allows the user to disconnect the last party added to a conference call.	(O)						
		- Hold - Suspends an established call while another action is taking place.	(O)						
		- Transfer - This feature allows the user to transfer a call to another DN. This feature is for use with voice calls only.	(O)						
		This feature may require an additional Call Appearance or an additional DN. This feature is available for use with EKTS sets with service provisioned in the EWSD® switch. EWSD® subscribers with Non-EKTS sets and 5ESS/DMS subscribers should use the Conference, Drop, Hold and Transfer feature in the following section.	(O)

A142. OBSOLETE SERVICE OFFERINGS - INTEGRATED SERVICES DIGITAL NETWORK (ISDN)

(T)(O) A142.2 ISDN - Residence Service (IRS) (Cont'd) A142.2.5 Optional Features (Cont'd) (T)(O) A. Optional Features (Cont'd) (O) The following features are available with either Custom ISDN or National ISDN. National ISDN customers may (O) purchase these features for use with either EKTS sets or non-EKTS sets. Call Forwarding Variable - This feature allows the ISDN user to have the ability to forward all incoming calls to a (O) user specified directory number. b. Call Forwarding Variable Feature Button - This feature is the same as Call Forwarding Variable except that it is (O) activated by a feature button. Call Forwarding Busy Line - This feature automatically routes calls to a preselected number when the called line is (O) busy. This feature may be either Fixed (changeable by service order only) or Programmable (customer changeable) by station user via Feature activation code. d. Call Forwarding Don't Answer - This feature automatically routes calls to a preselected number when the called line (O) does not answer in a preset ringing cycle. This feature may be either Fixed (changeable by service order only) or Programmable (customer changeable) by station user via Feature activation code. e. Call Forwarding Multiple Simultaneous - This feature allows a station line to forward more than one call at a time. (O) f. Call Pickup - Allows a user to answer calls directed to another line in the same preset Call Pickup Group. (O) g. Conference, Drop, Hold, Transfer -(O) - Conference - allows the user to add a third party to an existing conversation. This feature is for use with voice calls (O) - Drop - This central office based feature allows the user to disconnect the last party added to a conference call. (O) - Hold - allows the user to place a call on hold by pressing the function button. Any set with the call appearance for (O) the call on hold can pick up the call by pressing the call appearance button. - Transfer - This feature allows the user to transfer a call to another DN. This feature is for use with voice calls only. (O)

This feature may require an additional call appearance or an additional DN.

A142. OBSOLETE SERVICE OFFERINGS - INTEGRATED SERVICES DIGITAL NETWORK (ISDN)

			NETWORK (ISBN)						
142	.2 IS	DN	- Residence Service (IRS) (Cont'd)	(T)(O)					
A142	2.2.5	Opti	onal Features (Cont'd)	(T)(O)					
A.	Op	tional	ional Features (Cont'd)						
	2.	(Co	ont'd)	(O)					
		h.	Six-Way Conference, Drop, Hold, Transfer - This feature has the same functionality as Conference, Drop, Hold, Transfer feature except that six-way conference is allowed.	(O)					
		i.	Speed Calling - This feature allows each user to assign up to thirty telephone numbers to a two-digit code for the purpose of enabling abbreviated dialing.	(O)					
		j.	Calling/Called Number Delivery/Calling Name Delivery- National ISDN - This feature provides the user who is receiving/originating a call with information about the calling/called party and the facility or destination and is provided with IRS. Some "privacy" options may be in effect in certain areas and will be located in Section A13.	(O)					
		k.	Visual Message Waiting Indicator - Provides the user of a message service with a visual indication that a message is waiting.	(O)					
		1.	Audible Message Waiting Indicator - Provides the user of a message service with an audible indicator that a message is waiting.	(O)					
		m.	Additional Call Appearance - PDN or DN - This feature allows the terminal to have more than one DN button assigned to the same DN or Primary Directory Number (PDN).	(O)					
		n.	Call Tracing - This feature enables the customer to initiate an automatic trace of the last call received. Upon activation by the customer, the network automatically sends a message to the Company's Security Department indicating the calling number, the time the call was received, and the time the trace was activated. The customer using this feature would be required to contact the local business office for further action.	(O)					
		0.	Call Return - This feature enables a customer to place a call to the telephone number associated with the most recent call received, whether or not the call was answered or the number is known. The customer can dial a code or press a feature button to request that the network place the call.	(O)					
			If the called line is not busy, the call is placed. If the called line is busy, a confirmation announcement is heard. Once the customer hangs up, the network will monitor the busy/idle status of both lines every forty-five seconds for up to thirty minutes. If during the queuing process both lines become idle, the customer is alerted that the network is ready to place the call. When the customer picks up the telephone, the call will automatically be placed. If unanswered by the customer the alerting will repeat every five minutes until answered, or for the remainder of the thirty minute monitoring interval. Multiple numbers may be placed in queue. The first idle number will be connected first. Both the customer and the called party may originate and receive calls without affecting the call return feature status.	(O)					
		p.	Selective Call Forwarding - Allows the customer to transfer selected calls to another telephone number. A screening list of up to six numbers is created by the customer and placed in the network memory via an interactive dialing sequence. Subsequently, calls are forwarded to the Call Forwarding telephone number only if the calling number can be obtained and is found to match a number on the screening list.	(O)					
			If the customer also subscribes to Call Block and the same telephone number is entered on both screening lists, the Call Block feature must be deactivated to allow the call to be forwarded.	(O)					

This feature will not work if the incoming call is from a telephone number in a Hunt Group unless the telephone

number is the main number of the hunt group, or is Telephone Number identified.

A142. OBSOLETE SERVICE OFFERINGS - INTEGRATED SERVICES DIGITAL NETWORK (ISDN)

A142.2	2 IS	DN	- Residence Service (IRS) (Cont'd)	(T)(O)
A142.	2.5	Opti	onal Features (Cont'd)	(T)(O)
A.	Opt	ional	Features (Cont'd)	(O)
	2.	(Co	ont'd)	(O)
		q.	Call Block - This feature provides the customer the ability to prevent incoming calls from up to six different telephone numbers.	(O)
			A screening list is created by the customer either by adding the last number associated with the line (incoming or outgoing), or by preselecting the telephone numbers to be blocked. When a call is placed to the customer's number from a number on the screening list, the caller receives an announcement indicating that the party he is attempting to call does not wish to receive calls at this time.	(O)
			If the customer also subscribes to Selective Call Forwarding and/or Personalized Ring 6 and the same telephone numbers appear on those screening lists, Call Block will take precedence.	(O)
			This feature will not work if the incoming call is from a telephone number in a Hunt Group unless the telephone number is the main number of the hunt group, or is Telephone Number identified.	(O)
		r.	Personalized Ring 6 - This feature provides an alerting to the subscribing customer for up to six specific telephone numbers.	(O)
			The customer creates a screening list of up to six telephone numbers through an interactive dialing sequence. When a call is received from one of the predetermined telephone numbers, the customer is alerted. Calls from the telephone numbers not included on the screening list will produce a normal ring.	(O)
			When a telephone number on the Personalized Ring 6 screening list also appears on the Selective Call Forwarding list, the Selective Call Forwarding will take precedence. Likewise, when the same number is shown on the Call Block list, the call will be blocked.	(O)
			The customer's line will not produce an alert if the incoming call is from a telephone number in a Hunt Group unless the telephone number is the main number of the hunt group, or is Telephone Number identified.	(O)
		s.	Repeat Dialing - Repeat Dialing, when activated, automatically redials the last number the customer attempted to call. If the called line is not busy, the call will be placed.	(O)
			If the called line is busy, a confirmation announcement is heard, the customer hangs up and a queuing process begins. For the next thirty minutes both the calling and called lines are checked periodically for availability to complete the call. If during this queuing process the called line becomes idle, the customer is alerted that the network is ready to place the call. When the customer picks up the telephone, the call will automatically be placed.	(O)
		t.	Automatic Line/Direct Connect - Station specially programmed to dial specific internal station number or "0" or the attendant when the station user goes off-hook.	(O)
		u.	Selective Call Acceptance - Allows customers to accept incoming voice calls only from certain telephone numbers selected by the customer.	(O)
		v.	Station Restriction - Allows a station line to be assigned various type of restriction.	(O)
			- Denied Termination allows the station line to be used for outgoing calls only. It cannot receive incoming calls. All incoming calls are routed to common intercept announcement.	(O)
			- Denied Origination from Outgoing Calls allows the station line to be used for incoming calls only. No outgoing calls can be originated from it.	(O)
		w.	Redirected Number Feature – Redirected number delivery may be provided as a termination feature. If the received call has been previously forwarded, the first and last forwarding DN's will be delivered to the called party who subscribes to redirected number delivery.	(O)

AL-21-0035 EFFECTIVE: September 1, 2021

A142. OBSOLETE SERVICE OFFERINGS - INTEGRATED SERVICES DIGITAL NETWORK (ISDN)

(T)(O) A142.4 ISDN - Business Service (IBS) Effective September 1, 2021, ISDN - Business Service (IBS) will no longer be available for purchase by new or existing customers. (N) In addition, requests to move, add, change, or renew existing service arrangements will not be accepted. The Company will continue to provide existing service to existing customers until the expiration of a customer's term agreement. Following the expiration of a customer's existing term agreement, service will be provided on a month-to-month basis at the applicable Month-to-Month rates until the service is discontinued. The Company currently plans to discontinue this service on or after August 1, 2023. (T)(O) A142.4.1 General A. Effective April 30, 1998 ISDN - Business Service will be offered only under a Flat Rate Threshold Pricing Plan or a Usage (O) The Flat Rate Threshold Pricing Plan allows up to 320 hours of use each month per DSL at the flat rate. Minutes of use (O)rates will apply for all usage above the 320 hours per DSL threshold. Usage Option Plans will be available for various thresholds of local use only on National ISDN lines. Usage Option (O) Plans not available for IBS lines associated with a Centrex based system. Usage Option Plan A - The Basic Local Calling area for Usage Option Plan A will be the LATA boundary. Local (O) usage under Usage Option Plan A will be recorded on originating calls terminating within the LATA. Minutes of use rates will apply for all local usage. This plan is limited to outward only service. Usage Option Plan B will have unlimited usage inside the Extended Local Calling Area. The Extended Local (O) Calling Area for Usage Option Plan B will be the Basic Local Calling Area plus the Extended Calling Area as described in Section A3. The following stipulations apply only when the IBS line from which the call originates subscribes to a Usage Option Calls completed with operator assistance within the Basic Local Calling Area and Extended local calling area will be (O) rated at the Usage Option Plan usage charges in addition to the appropriate Operator Assisted Local Call surcharges. Such calls are itemized on the subscriber's billing statement and are billed outside any applicable usage allowances or caps. Reduced toll rates as specified in this section of the guidebook will be applied to toll calls outside the Extended Local (O) Calling Area but within the LATA for all calls billed to an IBS line subscribing to Option Plan B. Operator assisted charges as specified in A3. apply to operator handled calls in addition to the usage charges specified. All IBS lines in an earning account must be in the same type Plan, i.e., all Usage Option Plan A's, Threshold, etc. Hunting (O)between various types of plans will not be allowed. A minimum service period of three months will be required on IBS lines whether established under a Flat Rate Threshold (O)Pricing Plan or a Usage Option Plan. Termination Charges as defined in this Guidebook will apply if the customer terminates or disconnects the service prior to fulfilling the three months period. ISDN - Business Service (IBS) is a new intraLATA group of offerings supported by the Integrated Services Digital Network (O) (ISDN) architecture. IBS supports simultaneous transmission of voice and data services on the same exchange access line. Calling/Called Number (O) Delivery, Calling Name Delivery Hold are included with this service. IBS is available where facilities permit. IBS provides a new method of access to the telephone network called Basic Rate Access. Basic Rate Access will consist of (O)one or two 64 Kbps (B) channels and one 16 Kbps (D) channel at the service delivery point. IBS is provided through Basic Rate Access. Features are available to increase the capability of the Bearer Alternative Service (O) and may be subscribed to on an as-needed basis. B channel circuit switched services offer up to 64 Kbps intra-office transmission of voice or data. This option permits the (O) customer to utilize either circuit voice or data transmission paths on a per call selection basis. Transmission on the B channel will be circuit switched at 64 Kbps within the switch and/or equipped facilities between ISDN compatible central offices. ISDN interconnection to non-ISDN equipped central offices will be potentially subjected to analog transmission or sub-rated to 56 Kbps. This option includes one directory number (DN). IBS will consist of the following components: (O) - Basic Rate Digital Subscriber Line (DSL) Access (O) At least one channel, either B or D, must be activated. A maximum of two simultaneous B channels can be in use per Basic (O)

- Minimum of one and maximum of eight User Profiles per Basic Rate Digital Subscriber Line (DSL) Access Arrangement.

A142

142.	OBSOLETE SERVICE OFFERING - INTEGRATED SERVICES DIGITAL NETWORK (IS	DN)
1142.	4 ISDN - Business Service (IBS) (Cont'd)	(T)(O)
A142	2.4.2 Terms and Conditions	(T)(O)
A.	Customer Premises Equipment (CPE) that is compatible with the ISDN Interface is the responsibility of the user for provisioning.	(O)
В.	The Company will be responsible for publishing and maintaining ISDN Interface Specifications.	(O)
C.	The Company shall not be responsible if changes in any of the equipment, operations, or procedures of the Company utilized in the provision of Basic Rate Access render any facilities provided by the customer obsolete or require modification or alteration of such equipment or system, or otherwise affect its use or performance.	(O)
D.	Suspension of service is not allowed except for IBS lines associated with MultiServ service or MultiServ PLUS service. Suspension at the request of the subscriber will be allowed on the B channel portion of these main station lines at 50 percent of the rate regularly charged. Optional features outlined in Section A12. and this section will be suspended at no recurring charge during the period of suspension unless otherwise noted. Other rules and restrictions as outlined in Section A2. apply.	(O)
E.	Service Charges in Section A4. are applicable per Basic Rate DSL access in addition to rates and charges following.	(O)
F.	Installation charges in this Section will be waived for ISDN Residence Service customers transferring existing service to ISDN Business Service. Appropriate installation charges will be charged for any additions to the service completed at the time of transfer.	(O)
G.	Usage rates will apply for total local usage minutes over the 320 hours allowed under the flat rate Threshold Plan. Usage rates will apply for total local usage minutes under Usage Option Plan A. Usage rates, as appropriate, are specified in this section.	(O)
Н.	IBS will be available where central office and outside plant facilities permit.	(O)
I.	IBS served from a central office other than the central office the subscriber would normally be served from will require interoffice facilities as provided in this Section per DSL. Any non-ISDN interoffice facilities connecting to this service will follow the terms and conditions in Section A9.	(O)
	Existing customers may convert to the Interoffice Circuits in this Section or they may continue to pay rates for interoffice facilities from Section A9. until they make changes or additions. Existing customers choosing to convert interoffice facilities will not be charged the installation charge for Interoffice Circuits. Appropriate charges from Section A4. are also not applicable for these conversions. Any changes or additions completed at the time of conversion will be charged the appropriate Installation charges. When the customer requests changes or additions to existing interoffice facilities, they must subscribe to the Interoffice Circuits from this Section.	(O)
	At the Company's option, when the normal serving central office is not equipped for ISDN, a customer may be served with ISDN from another central office. IBS customers to be served under this arrangement must sign an agreement the service will be moved back to his normal serving central office and to a probable number change when/if that office is equipped with ISDN. When the Company elects this serving arrangement, the interoffice charges will not apply. Should the customer request to be served from an ISDN equipped central office other than the normal serving central office, the appropriate interoffice or interexchange charges will apply.	(O)
	Charges for interoffice facilities will apply for any IBS line associated with MultiServ service or MultiServ PLUS service that is served from a central office other than the normal central office.	(O)
J.	Each ISDN Basic Rate DSL Access Arrangement will be counted as one line in determining the application of the Service Charges specified in Section A4. and the End User Charges as specified in the End User Common Access Service section of BellSouth Telecommunications, Inc., FCC No. 1. Section 4.	(T)(O)
К.	IBS lines may be purchased to be associated with MultiServ service of MultiServ PLUS service, located in A12.20 and A12.21. Terms and conditions for MultiServ service and MultiServ PLUS service will apply to these IBS lines except as otherwise stated in this section.	(T)(O)
	Each ISDN Basic Rate DSL Access Arrangement will be counted as a MultiServ service or MultiServ PLUS service line in determining the total system size.	(O)
	IBS lines associated with MultiServ service or MultiServ PLUS service may purchase Optional Features compatible with ISDN from the MultiServ service Optional Features section of the MultiServ service section of the Guidebook as well as features unique to ISDN lines from the Optional Features in this section. When a feature is listed in the Optional Feature Sections of both the MultiServ service and IBS offerings, the IBS version of the feature should be ordered. MultiServ Service Feature Groups are not available for use with these IBS lines. IBS lines not associated with a MultiServ service or MultiServ PLUS service may not purchase features from the MultiServ service section of the Guidebook.	(O)
	Only 36-120 months contract period are available under the Rate Stability Plan ¹ in this section for IBS lines associated with a	(O)

Note 1: As of August 31, 2011, Rate Stability Plans are no longer available for new or renewing subscribers.

MultiServ service or MultiServ PLUS service as those lines must be coterminuous with the MultiServ service or MultiServ

PLUS service main station lines.

A142.4.3 Definitions

B CHANNEL

A bidirectional synchronous channel capable of supporting 64 Kbps of digital transmission.

D CHANNEL

A 16 Kbps digital signaling channel also capable of supporting 9.6 Kbps of packet information for the Basic Rate Interface.

64 KBPS CLEAR CHANNEL CAPACITY (CCC)

A B channel connection that provides end-to-end digital connection in which all 64 Kbps of bandwidth are available for customer use.

(T)(O) A142.4 ISDN - Business Service (IBS) (Cont'd) A142.4.5 Optional Features (Cont'd) (T)(O) A. Optional Features (Cont'd) (O) (Cont'd) (O) d. Key Short Hunt - This feature enhances call coverage by delivering key-set DN Short Hunt Capability to standard (O) feature ISDN Voice terminals. Shared Non-ISDN DN - This feature allows call coverage for an analog set. This service allowed only if ISDN and (O) Non-ISDN account owned by same customer and where facilities permit. Privacy Release - This is a privacy feature that allows a customer to specify, on an EKTS group basis, that no other (O) user can bridge on to calls. On a call-by-call basis, this feature can be disabled to allow bridging to occur. Manual Exclusion - This is the opposite of Privacy Release. On a call-by-call basis the user can restrict bridging. (O) EKTS Intercom Calling - Dial - This feature allows an EKTS user to call other terminals in the EKTS group with (O) one or two-digit dialing. EKTS Intercom Calling - Automatic - This feature allows an EKTS user to call another terminal in the EKTS group by activating a button on the EKTS set. EKTS Intercom Calling - Automatic - This feature allows EKTS user to call another terminal in the EKTS group by (O) activating a button on the EKTS set. EKTS Intercom Calling - Call Appearance. This feature allows EKTS Intercom Calling to be provisioned on a Call (O) Appearance. Conference, Drop, Hold, Transfer - EKTS (O) Conference - This feature allows the user to add a third party to an existing conversation. This feature is for use (O) with voice calls only. Drop - This central office based feature allows the user to disconnect the last party added to a conference call. (O) Hold - Suspends an established call while another action is taking place. (O) Transfer - This feature allows the user to transfer a call to another DN. This feature is for use with voice calls (O)only. This feature will require an additional Call Appearance or an additional DN. This feature is available for use only (O) with EKTS sets with service provisioned in the EWSD switch. EWSD subscribers with Non-EKTS sets and

5ESS/DMS subscribers should use the Conference, Drop, Hold and Transfer feature in the following section.

A142. OBSOLETE SERVICE OFFERING - INTEGRATED SERVICES DIGITAL NETWORK (ISDN)

A142.4	4 ISI	DN	- Business Service (IBS) (Cont'd)	(T)(O)
A142.	.4.5 ()nti	onal Features (Cont'd)	(T)(O)
		-	Features (Cont'd)	(O)
14.	2.	Th	e following features are available with either Custom ISDN or National ISDN. National ISDN customers may rehase these features for use with either EKTS sets or non-EKTS sets.	(O)
		a.	Call Forwarding Variable - This feature allows the ISDN user to have the ability to forward all incoming calls to a user specified directory number.	(O)
		b.	Call Forwarding Variable - Feature Button - This feature is the same as Call Forwarding Variable except that it is activated by a feature button.	(O)
		c.	Call Forwarding - Busy Line - This feature automatically routes calls to a preselected number when the called line is busy. This feature may be either fixed (changeable by service order only) or programmable (customer changeable) by station user via feature activation code.	(O)
		d.	Call Forwarding - Don't Answer - This feature automatically routes calls to a preselected number when the called line does not answer in a preset ringing cycle. This feature may be either fixed (changeable by service order only) or programmable (customer changeable) by station user via feature activation code.	(O)
		e.	Call Forwarding Multiple Simultaneous - Allows a station line to forward more than one call at a time.	(O)
		f.	Call Pickup - Allows a user to answer calls directed to another line in the same preset Call Pickup Group.	(O)
		g.	Conference, Drop, Hold, Transfer -	(O)
			- Conference - Allows the user to add a third party to an existing conversation. This feature is for use with voice calls only.	(O)
			- Drop - This central office based feature allows the user to disconnect the last party added to a conference call.	(O)
			- Hold - allows the user to place a call on hold by pressing the function button. Any set with the call appearance for the call on hold can pick up the call by pressing the call appearance button.	(O)
			- Transfer - This feature allows the user to transfer a call to another DN. This feature is for use with voice calls only.	(O)
			This feature may require an additional Call Appearance or an additional DN.	(O)
		h.	Six-Way Conference, Drop, Hold, Transfer - This feature has the same functionality as Conference, Drop, Hold, Transfer feature except that six-way conference is allowed.	(O)
		i.	Hunting - This feature provides for a predefined search for an idle directory number to which a call can be completed. Directory numbers subscribing to hunting may not have multiple call appearances.	(O)
		j.	Speed Calling - This feature allows each user to assign up to thirty telephone numbers to a two-digit code for the purpose of enabling abbreviated dialing.	(O)
		k.	Calling/Called Number Delivery/Calling Name Delivery – National ISDN - This feature provides the user who is receiving/originating a call with information about the calling/called party and the facility or destination and is provided with IBS. Some "privacy" options may be in effect in certain areas and will be located in Section A13.	(O)
		1.	(DELETED)	(O)
		m.	Visual Message Waiting Indicator - Provides the user of a message service with a visual indication that a message is waiting.	(O)

AL-21-0035 EFFECTIVE: September 1, 2021

A142. OBSOLETE SERVICE OFFERING - INTEGRATED SERVICES DIGITAL NETWORK (ISDN) A142.4 ISDN - Business Service (IBS) (Cont'd)

A142.	4.5	Opti	onal Features (Cont'd)	(T)(O)					
Α.	Opt	Optional Features (Cont'd)							
	2.		ont'd)	(O)					
		n.	Audible Message Waiting Indicator - Provides the user of a message service with an indication that a message is waiting.	(O)					
		0.	Additional Call Appearance - PDN or DN - This feature allows the terminal to have more than one DN button assigned to the same DN or Primary Directory Number (PDN).	(O)					
		p.	Call Tracing - This feature enables the customer to initiate an automatic trace of the last call received. Upon activation by the customer, the network automatically sends a message to the Company's Security Department indicating the calling number, the time the call was received, and the time the trace was activated. The customer using this feature would be required to contact the local business office for further action.	(O)					
		q.	Call Return - This feature enables a customer to place a call to the telephone number associated with the most recent call received, whether or not the call was answered or the number is known. The customer can dial a code or press a feature button to request that the network place the call.	(O)					
			If the called line is not busy, the call is placed. If the called line is busy, a confirmation announcement is heard. Once the customer hangs up, the network will monitor the busy/idle status of both lines every forty-five seconds for up to thirty minutes. If during the queuing process both lines become idle, the customer is alerted that the network is ready to place the call. When the customer picks up the telephone, the call will automatically be placed. If unanswered by the customer the alerting will repeat every five minutes until answered, or for the remainder of the thirty minute monitoring interval. Multiple numbers may be placed in queue. The first idle number will be connected first. Both the customer and the called party may originate and receive calls without affecting the call return feature status.	(O)					
		r.	Preferred Call Forwarding - Allows the customer to transfer selected calls to another telephone number. A screening list of up to six numbers is created by the customer and placed in the network memory via an interactive dialing sequence. Subsequently, calls are forwarded to the Call Forwarding telephone number only if the calling number can be obtained and is found to match a number on the screening list.	(O)					
			If the customer also subscribes to Call Block and the same telephone number is entered on both screening lists, the Call Block feature must be deactivated to allow the call to be forwarded.	(O)					
			This feature will not work if the incoming call is from a telephone number in a hunt group unless the telephone number is the main number of the hunt group, or is Telephone Number identified.	(O)					
		s.	Call Block - This feature provides the customer the ability to prevent incoming calls from up to six different telephone numbers.	(O)					
			A screening list is created by the customer either by adding the last number associated with the line (incoming or outgoing), or by preselecting the telephone numbers to be blocked. When a call is placed to the customer's number from a number on the screening list, the caller receives an announcement indicating that the party he is attempting to call does not wish to receive calls at this time.	(O)					
			If the customer also subscribes to Preferred Call Forwarding and/or Call Selector and the same telephone numbers appear on those screening lists, Call Block will take precedence.	(O)					

This feature will not work if the incoming call is from a telephone number in a hunt group unless the telephone

number is the main number of the hunt group, or is Telephone Number identified.

A142. OBSOLETE SERVICE OFFERING - INTEGRATED SERVICES DIGITAL NETWORK (ISDN)

2.	4 IS	DN	- Business Service (IBS) (Cont'd)	(T)(O
142	2.4.5	Opti	onal Features (Cont'd)	(T)(O)
A.	Op	tional	Features (Cont'd)	(O)
	2.	(Co	ont'd)	(O)
		t.	Call Selector - This feature provides an alerting to the subscribing customer for up to six specific telephone numbers.	(O)
			The customer creates a screening list of up to six telephone numbers through an interactive dialing sequence. When a call is received from one of the predetermined telephone numbers, the customer is alerted. Calls from the telephone numbers not included on the screening list will produce a normal ring.	(O)
			When a telephone number on the Call Selector screening list also appears on the Preferred Call Forwarding list, the Preferred Call Forwarding will take precedence. Likewise, when the same number is shown on the Call Block list, the call will be blocked.	(O)
			The customer's line will not produce an alert if the incoming call is from a telephone number in a hunt group unless the telephone number is the main number of the hunt group, or is Telephone Number identified.	(O)
		u.	Repeat Dialing - Repeat Dialing, when activated, automatically redials the last number the customer attempted to call. If the called line is not busy, the call will be placed.	(O)
			If the called line is busy, a confirmation announcement is heard, the customer hangs up and a queuing process begins. For the next thirty minutes both the calling and called lines are checked periodically for availability to complete the call. If during this queuing process the called line becomes idle, the customer is alerted that the network is ready to place the call. When the customer picks up the telephone, the call will automatically be placed.	(O)
		v.	Automatic Line/Direct Connect - Station specially programmed to dial specific internal station number or "0" or the attendant when the station user goes off-hook.	(O)
		w.	Make Set Busy - Provides the individual station user the option of making the line or directory number appear busy/unavailable to incoming calls. The All Calls feature enables the user to make the line appear busy to all types of incoming calls. The Intragroup feature makes the line appear busy to intragroup calls with external calls not blocked.	(O)
		х.	Selective Call Acceptance - Allows customers to accept incoming voice calls only from certain telephone numbers selected by the customer.	(O)
		y.	Station Restriction - Allows a station line to be assigned various types of restriction.	(O)
			Denied Termination allows the station line to be used for outgoing calls only. It cannot receive incoming calls. All incoming calls are routed to common intercept announcement.	(O)
			Denied Origination from Outgoing Calls allows the station line to be used for incoming calls only. No outgoing calls can be originated from it.	(0)
		z.	Call Park/Call Retrieve - The Call Park feature allows a user, active on a call, to park a call against the user's DN. When parked, the call is in a state similar to Hard Hold. After being parked, the call can be retrieved by the user.	(O)
		aa.	Call Transfer System Exception - This feature allows the user to have Call Transfer capabilities that differ from the capabilities established for the customer group. The different capabilities may include the type of call that can be transferred and/or the destination to which it can be transferred.	(O)
		ab.	Dial Call Waiting - The Dial Call Waiting feature provides the ability for originating main station lines to invoke call waiting service on selected intragroup calls by dialing an access code followed by the extension number of the main station line to be call waited.	(O)
		ac.	Redirected Number Feature – Redirected number delivery may be provided as a terminating feature. If the received	(O)

call has been previously forwarded, the first and last forwarding DN's will be delivered to the called party who

subscribes to redirected number delivery.
