PRIVATE LINE SERVICES

B8. CONNECTIONS OF PREMISES EQUIPMENT TO PRIVATE LINE SERVICES

- 8.1 CONNECTIONS OF TERMINAL EQUIPMENT, PRIVATE BRANCH EXCHANGE SYSTEMS AND COMMUNICATIONS SYSTEMS
- 8.1.1 GENERAL PROVISIONS
 - A. GENERAL
 - Terminal equipment and multiline terminating systems provided by the customer may be connected at the customer's premises to private line services furnished by the Utility where such connections are made in accordance with the provisions of this Schedule and Schedule Cal.P.U.C. No. B3.
 - The term "telecommunications services" when used in the Schedule denotes exchange service and Long Distance Message Telecommunications Service (LDMTS).
 - B. RESPONSIBILITY OF THE CUSTOMER
 - 1. The customer shall be responsible for the installation, operation and maintenance of any customer-provided terminal equipment or multiline terminating systems. No combinations of customer-provided terminal equipment or multiline terminating system shall require change in or alteration of the equipment or services of the Utility, cause electrical hazards to Utility personnel, damage to Utility equipment, malfunction of Utility billing equipment, or degradation of service to persons other than the user of the subject terminal equipment or multiline terminating system, the calling or called party. Upon notice from the Utility that a customer-provided terminal equipment or multiline terminating system is causing such hazard, damage, malfunction or degradation of service the customer shall make such change as shall be necessary to remove or prevent such hazard, damage malfunction or degradation of service.
 - 2. Where the customer elects to provide their own data set(s) on a given Utility-provided private line, it shall be the responsibility of the customer to ensure the continuing compatibility of such data set(s) with the private line service furnished by the Utility.
 - 3. The customer shall be responsible for the payment of a visit charge as set forth in Schedule Cal.P.U.C. No. A8.3.1 for visits by the Utility to the customer's premises where the service difficulty or trouble report results from the use of equipment or facilities provided by the customer.

Continued

Date Filed: March 24, 2006 Effective: April 24, 2006 Resolution No.

B8. CONNECTIONS OF PREMISES EQUIPMENT TO PRIVATE LINE SERVICES 8.1 CONNECTIONS OF TERMINAL EQUIPMENT, PRIVATE BRANCH EXCHANGE SYSTEMS AND COMMUNICATIONS SYSTEMS (Cont'd) 8.1.1 GENERAL PROVISIONS (Cont'd) B. RESPONSIBILITY OF THE CUSTOMER (Cont'd) 4. The Customer who provides the Premises Wiring of multiline terminating systems subject to Part 68 of the F.C.C.'s Rules and Regulations pursuant to Section 68.215 of Chapter I of Title 47 of that Code of Federal Regulations shall be responsible for the payment of an Institutional Program for Premises Wiring Charge as provided in Schedule Cal.P.U.C. No. B8.1.18,G. for activities performed by the Utility at the customer's (T) premises pursuant to Subsections (f), (g) and/or (h) of said Section 68.215, when the premises wiring in question has failed acceptance tests monitored by, or participated in by, the Utility pursuant to Section 68.215, and/or has been revealed to be not in conformance with the information provided in the related affidavit which was provided pursuant to Section 68.215, and/or has resulted in a harm to the network.

- C. RESPONSIBILITY OF THE UTILITY
- 1. Private line services are not represented as adapted to the use of customer provided terminal equipment or multiline terminating systems. Where such terminal equipment or multiline terminating systems are used with private line services, the responsibility of the Utility shall be limited to the furnishing of facilities suitable for private line services and to the maintenance and operation of such facilities up to the Utility's local loop demarcation point in a manner proper for such services. Subject to this responsibility the Utility shall not be responsible for:
 - a. The through transmission of signals generated by the customer-provided terminal equipment or multiline terminating systems or for the quality of, or defects in, such transmission, or
 - The reception of signals by customer-provided terminal equipment or multiline terminating systems, or
 - c. Address signaling where such signaling is performed by customer-provided signaling equipment.
- 2. The Utility will, at the customer's request, provide information concerning interface parameters, including the number of ringers which may be connected to a particular line, needed to permit customer-provided terminal equipment to operate in a manner compatible with the telecommunications network.

B8. CONNECTIONS OF PREMISES EQUIPMENT TO PRIVATE LINE SERVICES

- 8.1 CONNECTIONS OF TERMINAL EQUIPMENT, PRIVATE BRANCH EXCHANGE SYSTEMS AND COMMUNICATIONS SYSTEMS (Cont'd)
- 8.1.1 GENERAL PROVISIONS (Cont'd)
- C. RESPONSIBILITY OF THE UTILITY (Cont'd)
 - 3. The Utility may make changes in its telecommunications network, equipment, operations or procedures, where such action is not inconsistent with Part 68 of the F.C.C.'s Rules and Regulations. If such changes can be reasonably expected to render any customer's terminal equipment or multiline terminating system incompatible with the telecommunications network, or require modification or alteration of such customer-provided terminal equipment or multiline terminating system systems, or otherwise materially affect its use or performance, the customer will be given adequate notice in writing, to allow the customer an opportunity to maintain uninterrupted service.
- D. RECORDING OF TWO-WAY TELEPHONE CONVERSATIONS

Private line services are not represented as adapted to the recording of two-way telephone conversations. When customer-provided voice recording equipment is used with a private line service which is connected to telecommunications services, the provisions relating to Recording of Two-Way Telephone Conversations as set forth in Schedule Cal.P.U.C. No. A8.1.1,D. are applicable to such private line service.

E. VIOLATION OF REGULATIONS

When any customer-provided terminal equipment or multiline terminating system is used with telecommunications services in violation of any of the provisions in this schedule, the Utility will take such immediate action as necessary for the protection of the telecommunications network and Utility employees, and will promptly notify the customer of the violation. The customer shall discontinue such use of the terminal equipment or multiline terminating system or correct the violation and shall confirm in writing to the Utility within 10 days, following the receipt of written notice from the Utility, that such use has ceased or that the violation has been corrected. Failure of the customer to discontinue such use or to correct the violation and to give the required written confirmation to the Utility within the time stated above shall result in discontinuance of the customer's service involved with the violation in accordance with Schedule Cal.P.U.C. No. A2.1.11.

Date Filed: March 4, 1985 Effective: April 18, 1985 Resolution No.

Eric Batongbacal

B8. CONNECTIONS OF PREMISES EQUIPMENT TO PRIVATE LINE SERVICES

- 8.1 CONNECTIONS OF TERMINAL EQUIPMENT, PRIVATE BRANCH EXCHANGE SYSTEMS AND COMMUNICATIONS SYSTEMS (Cont'd)
- 8.1.1 GENERAL PROVISIONS (Cont'd)
 - F. DEFINITIONS

ACCESSORIES

Accessories are devices which are mechanically attached to, or used with telecommunications service. They are independent of the transmission conductors in the communications path of telecommunications service. (Devices which are electrically, acoustically or inductively connected to telecommunications service are not considered accessories.) Examples of accessories are telephone dial locks and headset shoulder rests.

Accessories may be used with telecommunications service if they do not cause any harm to the telecommunications network or Utility-provided equipment.

CUSTOMER-PROVIDED COMMUNICATIONS SYSTEMS

Denotes systems, channels or other facilities not subject to Part 68 of the F.C.C.'s Rules and Regulations. A typical example would be a customer-provided private microwave system.

B8. CONNECTIONS OF PREMISES EQUIPMENT TO PRIVATE LINE SERVICES

- 8.1 CONNECTIONS OF TERMINAL EQUIPMENT, PRIVATE BRANCH EXCHANGE SYSTEMS AND COMMUNICATIONS SYSTEMS (Cont'd)
- 8.1.1 GENERAL PROVISIONS (Cont'd)
- F. DEFINITIONS (Cont'd)

GRANDFATHERED MULTILINE TERMINATING SYSTEMS

The term "Grandfathered Multiline Terminating Systems" as used in this schedule denotes customer-provided multiline terminating systems (including their equipment, premises wiring and protective circuitry, if any) connected at the customer's premises, in accordance with any Utility's tariffs, and that are considered to be grandfathered under Part 68 of the F.C.C.'s Rules and Regulations because, (a) such systems were connected to the telecommunications network or the private line services specified in Schedule Cal.P.U.C. No. B8.1.2 prior to January 1, 1980 and were of a type system which was directly connected (i.e. without Utility provided connecting arrangements) to the telecommunications network or the private line services specified in Schedule Cal.P.U.C. No. B8.1.2 as of June 1, 1978, or (b) such systems are connected to the private line services specified in Schedule Cal.P.U.C. No. B8.1.2 prior to May 1, 1983 and are a type system which was directly connected (i.e. without Utility-provided connecting arrangements) to the private line services specified in Schedule Cal.P.U.C. Nos. A8.1.2 or B8.1.2 as of April 30, 1980.

CUSTOMER-PROVIDED TEST EQUIPMENT

The term "Customer-Provided Test Equipment" as used in this B8. tariff denotes test equipment located at the premises of the customer that is used by the customer for the detection and/or isolation of a communications service fault.

B8. CONNECTIONS OF PREMISES EQUIPMENT TO PRIVATE LINE SERVICES

- 8.1 CONNECTIONS OF TERMINAL EQUIPMENT, PRIVATE BRANCH EXCHANGE SYSTEMS AND COMMUNICATIONS SYSTEMS (Cont'd)
- 8.1.1 GENERAL PROVISIONS (Cont'd)
- F. DEFINITIONS (Cont'd)

GRANDFATHERED CONNECTIONS OF MULTILINE TERMINATING SYSTEMS

The term "Grandfathered Connections of Multiline Terminating Systems" as used in this schedule denotes connections via Utility provided connecting arrangements of customer-provided multiline terminating systems (including their equipment and premises wiring) at the customer's premises, in accordance with the Utility's tariffs, and that are considered to be grandfathered under Part 68 of the F.C.C.'s Rules and Regulations because, (a) such connections to the telecommunications network or the private line services specified in Schedule Cal.P.U.C. No. B8.1.2 following were made via Utility provided connecting arrangements prior to January 1, 1980 and such connecting arrangements are of a type of connecting arrangement connected to the telecommunications network or the private line services specified in Schedule Cal.P.U.C. No. B8.1.2 following as of June 1, 1978, or (b) such connections to the private line services specified in Schedule Cal.P.U.C. No. B8.1.2 following are made via Utility provided connecting arrangements prior to May 1, 1983 and such connecting arrangements are of a type of connecting arrangement connected to the private line services specified in Schedule Cal.P.U.C. No. B8.1.2 following as of April 30, 1980.

GRANDFATHERED TERMINAL EQUIPMENT

The term "Grandfathered Terminal Equipment" as used in this schedule denotes customer-provided terminal equipment (including protective circuitry if any) connected at the customer's premises, in accordance with any Utility's tariffs, and that is considered to be grandfathered under Part 68 of the F.C.C.'s Rules and Regulations because, (a) such terminal equipment was connected to the telecommunications network or the private line services specified in Schedule Cal.P.U.C. No. B8.1.2 following prior to July 1, 1979, and was of a type of terminal equipment which was directly connected (i.e. without Utility provided connecting arrangements) to the telecommunications network or the private line services specified in Schedule Cal.P.U.C. No. B8.1.2 following as of October 17, 1977, or (b) such terminal equipment is connected to the private line services specified in Schedule Cal.P.U.C. No. B8.1.2 following prior to May 1, 1983 and is of a type of terminal equipment which was directly connected (i.e. without Utility provided connecting arrangements) to the private line services specified in Schedule Cal.P.U.C. No. B8.1.2 following as of April 30, 1980.

- 8.1 CONNECTIONS OF TERMINAL EQUIPMENT, PRIVATE BRANCH EXCHANGE SYSTEMS AND COMMUNICATIONS SYSTEMS (Cont'd)
- 8.1.1 GENERAL PROVISIONS (Cont'd)
- F. DEFINITIONS (Cont'd)

GRANDFATHERED CONNECTIONS OF TERMINAL EQUIPMENT

The term "Grandfathered Connections of Terminal Equipment" as used in this schedule denotes connections via Utility provided connecting arrangements of customer-provided terminal equipment connected at the customer's premises, in accordance with any Utility's tariffs, and that are considered to be grandfathered under Part 68 of the F.C.C.'s Rules and Regulations because, (a) such connections to the telecommunications network or the private line services specified in Schedule Cal.P.U.C. No. B8.1.2 were made via Utility provided connecting arrangements prior to July 1, 1979 and such connecting arrangements are of a type of connecting arrangement connected to the telecommunications network or the private line services specified in Schedule Cal.P.U.C. No. B8.1.2 as of October 17, 1977, or (b) such connections to the private line services specified in Schedule Cal.P.U.C. No. B8.1.2 are made via Utility provided connecting arrangements prior to May 1, 1983 and such connecting arrangements are of a type of connecting arrangement connected to the private line services specified in Schedule Cal.P.U.C. No. B8.1.2 as of April 30, 1980.

HARM

Harm consists of hazards to personnel, damage to Utility equipment, and impairment of service to persons other than the user of the customerprovided equipment. Types of harm include, but shall not be limited to, voltages dangerous to personnel, destruction of or damage to Utility equipment, induced noise or cross talk, failure of supervision, false answer, incorrect billing, absence of voice band transmission path for call progress signals, and loss of capability to answer an incoming call.

MULTILINE TERMINATING SYSTEM

The term "Multiline terminating System" denotes switching systems (i.e. PBX, Centrex, ACD, Tandem switching equipment, etc.) and key telephone type systems, subject to Part 68 of the F.C.C.'s Rules and Regulations, which are capable of terminating more than one local central office line (D) or private line.

B8. CONNECTIONS OF PREMISES EQUIPMENT TO PRIVATE LINE SERVICES

- 8.1 CONNECTIONS OF TERMINAL EQUIPMENT, PRIVATE BRANCH EXCHANGE SYSTEMS AND COMMUNICATIONS SYSTEMS (Cont'd)
- 8.1.1 GENERAL PROVISIONS (Cont'd)
- F. DEFINITIONS (Cont'd)

NETWORK CONTROL SIGNALING

The term "Network Control Signaling" denotes the transmission of signals used in the telecommunications system which perform functions such as supervision (control, status and charging signals), address signaling (e.g. dialing), calling and called number identification, audible tone signals (call progress signals indicating reorder of busy conditions, alerting, coin denominations, coin collect and coin return tones) to control the operation of switching machines in the telecommunications systems.

REGISTERED

The term "Registered" as used in this tariff denotes equipment which complies and has been approved within the Registration provisions of Part 68 of the F.C.C.'s Rules and Regulations.

TERMINAL EQUIPMENT

Terminal equipment includes devices or apparatus and their associated wiring provided by a customer or authorized user that do not constitute (T) a multiline terminating system and that where connected to the (T) communication path of the telecommunications network are connected either electrically, acoustically or inductively. Terminal equipment includes telephones, data equipment and ancillary equipment located on the (T) customer's side of the local loop demarcation point. (N)

B8. CONNECTIONS OF PREMISES EQUIPMENT TO PRIVATE LINE SERVICES

- 8.1 CONNECTIONS OF TERMINAL EQUIPMENT, PRIVATE BRANCH EXCHANGE SYSTEMS AND COMMUNICATIONS SYSTEMS (Cont'd)
- 8.1.2 CONNECTIONS OF REGISTERED EQUIPMENT
 - A. REGULATIONS

Terminal equipment, protective circuitry and multiline terminating systems that are registered may be connected to those private line services specified below, subject to this schedule and Schedule Cal.P.U.C. No. B8.1.1.

- The connection may be made only on the customer's side of the local loop demarcation point to private line services that present a two-wire or four-wire loop signaling interface for such connection under the following conditions:
 - a. Registered terminal equipment, registered protective circuitry and registered key telephone systems may be connected to the station end of private line services furnished in connection with off-premises stations.
 - b. Registered PBX Systems may be connected, as a trunk termination, to the station end of private line services furnished in connection with off-premises stations.
 - c. A foreign exchange channel may be utilized with registered terminal equipment, registered protective circuitry and registered multiline terminating systems which are connected to the exchange telephone service associated with such channels.
- 2. The connection of registered terminal equipment and registered PBX systems may be made only on the customer's side of the local loop demarcation point to a telephone or data private line service that present an interface for either 2 or 4 wire transmission, with separate E and M signaling leads conventionally known as Type I (battery/ground) or Type II (contact closure type). Such E and M signaling leads are those terminal equipment or PBX leads (other than voice or data communications leads) used for the purpose of transferring supervisory or address signals across the interface.
- 3. The connection of customer provided registered terminal equipment and registered PBX systems may be made only on the customer's side of the local loop demarcation point to a Metallic, Telegraph or Voice Grade (T) private line service furnished to provide indications of message registration of outgoing calls or automatic identification of outward dialing (AIOD) to such customer provided equipment or systems.

In addition, customers who intend to install, perform additions to, or make rearrangements of AIOD functions shall give advance notice to the Utility in accordance with the procedures specified in Part 68 of the F.C.C.'s Rules and Regulations or as otherwise authorized by the F.C.C.

- 8.1 CONNECTIONS OF TERMINAL EQUIPMENT, PRIVATE BRANCH EXCHANGE SYSTEMS AND COMMUNICATIONS SYSTEMS (Cont'd)
- 8.1.3 CONNECTIONS OF GRANDFATHERED TERMINAL EQUIPMENT AND MULTI-LINE TERMINATING SYSTEMS
 - A. REGULATIONS
 - 1. Direct Connections
 - a. Grandfathered terminal equipment and grandfathered multiline terminating systems, directly connected to the private line services specified in Schedule Cal.P.U.C. No. B8.1.2 are subject to A. and D. of Schedule Cal.P.U.C. No. A8.1.3.. Such connections are subject to the minimum protection criteria set forth in Schedule Cal.P.U.C. No. B8.1.5,F.
 - b. Grandfathered terminal equipment and grandfathered multiline terminating systems, directly connected to the private line services specified in Schedule Cal.P.U.C. No. B8.1.2 on April 30, 1980, may remain connected for the life of the equipment without registration, and may be modified only in accordance with Part 68 of the F.C.C.'s Rules and Regulations, subject to the following:
 - (1) All such connections shall comply with the minimum protection criteria set forth in Schedule Cal.P.U.C. No. B8.1.5,F.
 - (2) No changes may be made to equipment so connected except by the manufacturer thereof, or a duly authorized agent of the manufacturer.
 - c. Until May 1, 1983, new installations of terminal equipment or multiline terminating systems which have been grandfathered may be connected for use with the private line services specified in Schedule Cal.P.U.C. No. B8.1.2 subject to the following:
 - (1) The customer shall notify the Utility when such equipment or systems are to be connected and shall notify the Utility when such equipment or systems are to be permanently disconnected; such notification shall include a description of the equipment including the manufacturer's name, model number and type of equipment;
 - (2) All such connections are made through a SNI or equivalent conforming (T) to Part 68, Subpart F, of the FCC's Rules and Regulations or are (T) otherwise connected by the Utility;
 - (3) All such connections shall comply with the minimum protection criteria set forth in Schedule Cal.P.U.C. No. B8.1.5,F.;
 - (4) Premises wiring associated with multiline terminating systems shall conform to Part 68 of the F.C.C.'s Rules and Regulations.

PRIVATE LINE SERVICES

B8. CONNECTIONS OF PREMISES EQUIPMENT TO PRIVATE LINE SERVICES

- 8.1 CONNECTIONS OF TERMINAL EQUIPMENT, PRIVATE BRANCH EXCHANGE SYSTEMS AND COMMUNICATIONS SYSTEMS (Cont'd)
- 8.1.5 CONNECTIONS OF CUSTOMER PROVIDED TERMINAL EQUIPMENT NOT SUBJECT TO F.C.C. REGISTRATION PROGRAM
 - A. GENERAL
 - Connecting arrangements are not required and minimum protection criteria are not applicable where customer provided terminal equipment or multiline terminating systems are connected with the following channels when such channels are used for the types of transmission specified herein due to the nature of the service provided and/or the type of channels and equipment used.

Metallic and Telegraph Channels Voice Grade Channels

Series 6000 Channels Series 7000 Channels

- Except as otherwise provided in Schedule Cal.P.U.C. Nos. B8.1.2 and B8.1.3, customer provided terminal equipment and multiline terminating systems may be electrically connected to private line services in accordance with this schedule.
 - a. When the customer provided terminal equipment or multiline terminating system is connected with private line service furnished by the Utility and such private line service is not arranged for connection to telecommunications services, such connections shall be made to an interface provided by the Utility at the local loop demarcation point.
 - b. When the customer provided terminal equipment or multiline terminating system is connected with private line service furnished by the Utility and such private line service is arranged for connection to telecommunications services:
 - Except as otherwise specified in D.1.d. following, such connections shall be made through a connecting arrangement as provided in this Schedule and
 - The connection shall be such that the functions of network control signaling (except customer provided tone-type address signaling through a Utility-provided connecting arrangement) are performed by equipment furnished by the Utility and

FRIVALE LINE SERVICES
B8. CONNECTIONS OF PREMISES EQUIPMENT TO PRIVATE LINE SERVICES
 8.1 CONNECTIONS OF TERMINAL EQUIPMENT, PRIVATE BRANCH EXCHANGE SYSTEMS AND COMMUNICATIONS SYSTEMS (Cont'd) 8.1.5 CONNECTIONS OF CUSTOMER PROVIDED TERMINAL EQUIPMENT NOT SUBJECT TO F.C.C. z REGISTRATION PROGRAM (Cont'd) A. GENERAL (Cont'd) 2. (Cont'd)
c. Customer provided terminal equipment or multiline terminating systems z connected pursuant to a. or b. preceding must comply with the minimum protection criteria specified in F. following.
B. DATA TERMINAL EQUIPMENT
Customer provided data terminal equipment (including telephotograph z equipment) may be connected at the customer's or authorized user's premises to private line service through a network control signaling unit and a data access arrangement provided by the Utility at the local loop (T) demarcation point in accordance with the following when such private line (T) service is arranged as provided in A.2.b. preceding.
1. The customer or authorized user shall furnish the equipment which performs the functions of:
a. Conditioning the data signals generated by the customer-provided terminal equipment to signals suitable for transmission by means of Utility services, and
b. Conditioning signals transmitted by means of Utility services to data signals suitable for reception by customer-provided equipment.
2. Where a data access arrangement is furnished in connection with customer provided terminal equipment and such terminal equipment is used z for both voice and data communication, the data access arrangement may be used to connect the customer provided terminal equipment for voice z communication.
C. VOICE TERMINAL EQUIPMENT
 Customer provided voice terminal equipment may be connected on the (T) customer's side of the local loop demarcation point to private line (T) service in accordance with the following when such private line service is arranged as provided in A.2.b. preceding.
a. The connection shall be made through a network control signaling unit and a connecting arrangement furnished by the Utility.

PRIVATE LINE SERVICES

B8. CONNECTIONS OF PREMISES EQUIPMENT TO PRIVATE LINE SERVICES

- 8.1 CONNECTIONS OF TERMINAL EQUIPMENT, PRIVATE BRANCH EXCHANGE SYSTEMS AND COMMUNICATIONS SYSTEMS (Cont'd)
- 8.1.5 CONNECTIONS OF CUSTOMER-PROVIDED TERMINAL EQUIPMENT NOT SUBJECT TO F.C.C. REGISTRATION PROGRAM (Cont'd)
- D. CUSTOMER-PROVIDED COMMUNICATIONS SYSTEMS NOT SUBJECT TO PART 68 OF THE F.C.C.'S REGISTRATION PROGRAM (Cont'd)
 - 3. Extraordinary Procedures
 - a. The Utility may invoke extraordinary procedures to protect the private line service where one or more of the following conditions are present:
 - Information provided in the affidavit gives reason to believe that a violation of Part 68 of the F.C.C.'s Rules and Regulations or the Institutional Procedures set forth in Schedule Cal.P.U.C. No. B8.1.5,D.2. is likely.
 - Harm has occurred and there is reason to believe this harm was a result of operations performed under the Institutional Procedures set forth in Schedule Cal.P.U.C. No. B8.1.5,D.2.
 - b. The extraordinary procedures, which can be invoked by the Utility, include:
 - Requiring the use of protective apparatus which either protects solely against signal power or which assures that all of the requirements of Part 68 are met at the private line service interface. This protective apparatus may be provided by either the Utility or the customer.
 - Disconnecting service.
 - c. A charge equal to the Maintenance of Service charge as provided in Schedule Cal.P.U.C. No. B8.1.18, I. will apply when:
 - It is necessary to send a Utility employee to the premises where the connection is made because a condition set forth in 3.a. preceding exists, and
 - A failure to comply with Part 68 of the F.C.C.'s Rules and Regulations or the Institutional Procedures for signal power control in Schedule Cal.P.U.C. No. B8.1.5,D.2. is disclosed.

PRIVATE LINE SERVICES

B8. CONNECTIONS OF PREMISES EQUIPMENT TO PRIVATE LINE SERVICES

- 8.1 CONNECTIONS OF TERMINAL EQUIPMENT, PRIVATE BRANCH EXCHANGE SYSTEMS AND COMMUNICATIONS SYSTEMS (Cont'd)
- 8.1.5 CONNECTIONS OF CUSTOMER PROVIDED TERMINAL EQUIPMENT NOT SUBJECT TO F.C.C. z REGISTRATION PROGRAM (Cont'd)
 - E. ACCESSORIES

Accessories provided by a customer may be used with private line services provided that such accessories comply with the provisions of Schedule Cal.P.U.C. No. B8.1.1,B.1.

- F. MINIMUM PROTECTION CRITERIA FOR ELECTRICAL CONNECTIONS
- 1. Since private line services utilize Utility channels and equipment common with other services, it is necessary in order to prevent excessive noise and crosstalk that the power of the signal applied to the Utility private line service be individually engineered, a single valued limit for all applications cannot be specified. Therefore, the power of the signal in the band above 300 Hertz which may be applied by the customer provided equipment to the interface will be specified by the Utility for each application to be consistent with the signal power allowed on the telecommunications network.
- 2. To protect other services, it is necessary that the signal applied by the (T) customer provided equipment to the Utility interface located on the z customer's side of the Utility's local loop demarcation point meet the (T) following limits:
 - a. The power in the band from 3,995 Hertz to 4,005 Hertz shall be at least 18db below the power of the signal as specified in a. above.
 - b. The power in the band from 4,005 Hertz to 10,000 Hertz shall not exceed 16db below one milliwatt.
 - c. The power in the band from 10,000 Hertz to 25,000 Hertz shall not exceed 24db below one milliwatt.
 - d. The power in the band from 25,000 Hertz to 40,000 Hertz shall not exceed 36db below one milliwatt.
 - e. The power in the band above 40,000 Hertz shall not exceed 50db below one milliwatt.

PRIVATE LINE SERVICES

B8. CONNECTIONS OF PREMISES EQUIPMENT TO PRIVATE LINE SERVICES

- 8.1 CONNECTIONS OF TERMINAL EQUIPMENT, PRIVATE BRANCH EXCHANGE SYSTEMS AND COMMUNICATIONS SYSTEMS (Cont'd)
- 8.1.5 CONNECTIONS OF CUSTOMER PROVIDED TERMINAL EQUIPMENT NOT SUBJECT TO F.C.C.REGISTRATION PROGRAM (Cont'd)
 - F. MINIMUM PROTECTION CRITERIA FOR ELECTRICAL CONNECTIONS (Cont'd)
 - 3. Where there is connection to telecommunications services, to prevent the interruption or disconnection of a call or interference with network (T) control signaling, it is necessary that the signal applied by the customer provided equipment to the Utility interface located at the (T) Utility's local loop demarcation point at no time have energy solely in the 2450 to 2750 Hertz band. If signal power is in the 2450 to 2750 Hertz band, it must not exceed the power present at the same time in the 800 to 2450 Hertz band.
 - G. ACOUSTIC OR INDUCTIVE CONNECTIONS
 - 1. General
 - a. Customer provided voice or data terminal equipment (including z telephotograph equipment) may be acoustically or inductively connected (T) on the customer's premises at the Utility's local loop demarcation point (T) to a private line service provided the acoustic or inductive connection is made externally to the network control signaling unit when such unit is provided by the Utility.
 - b. Customer provided multiline terminating systems may be acoustically or inductively connected with private line service as specified in a. following, provided the acoustic or inductive connection is made externally to the network control signaling unit when such unit is provided by the Utility.
 - (1) Customer provided multiline terminating systems may be connected on (T) the customer's premises at the Utility's local loop demarcation point where the customer has a regular and continuing requirement for the (T) origination or termination of communications over the customer provided multiline terminating system provided that:
 - The normal mode of operation of the customer provided multiline terminating system shall be to provide communications originating or terminating at the premises on which the connection is made.
 - The connection shall be to channels of voice grade or less furnished by the Utility.

z Correction

Continued

Advice Letter No. 16555

Issued by

Eric Batongbacal

Date Filed: May 10, 1993 Effective: August 8, 1993 Resolution No.

B8. CONNECTIONS OF PREMISES EQUIPMENT TO PRIVATE LINE SERVICES
 8.1 CONNECTIONS OF TERMINAL EQUIPMENT, PRIVATE BRANCH EXCHANGE SYSTEMS AND COMMUNICATIONS SYSTEMS (Cont'd) 8.1.5 CONNECTIONS OF CUSTOMER PROVIDED TERMINAL EQUIPMENT NOT SUBJECT TO z F.C.C. REGISTRATION PROGRAM (Cont'd) G. ACOUSTIC OR INDUCTIVE CONNECTIONS (Cont'd) 1. General
c. A multiline terminating system provided by an authorized user may be acoustically or inductively connected at the Utility's local loop (T) demarcation point with Utility facilities for private line service, on (T) which the authorized user has a station, provided that:
(1) The normal mode of operation of the authorized customer provided z multiline terminating system shall be to provide communications originating or terminating at the premises on which the connection is made.
(2) The customer has a regular and continuing requirement for communications originating or terminating at the authorized user's premises at which the connection is made.
(3) The connection shall be to channels of voice grade or less furnished by the Utility.
(4) The connection shall be made on the same basis as set forth for the customer in 2. preceding.
(5) All communications over the interconnected facilities shall be between the customer and authorized user and relate directly to the customer's business.
d. Customer provided tone-type address signaling is permitted through such z connections, however, the services of the Utility are not designed for such use and the Utility makes no representation as to the reliability of address signaling which is performed in such manner.
2. Minimum Protection Criteria
 a. Since private line services utilize Utility channels and equipment in common with other services, it is necessary in order to prevent excessive noise and crosstalk that the power of the signal applied to the Utility private line service be limited. Because each private line service is individually engineered, a single valued limit for all applications cannot be specified. Therefore, the power of the signal that may be (T) applied by the customer provided equipment to the Standard Network Interface at the Utility's local loop demarcation point will be (T) specified by the Utility for each application to be consistent with the signal power allowed on the telecommunications network.
Continued

Decision No.

B8. CONNECTIONS OF PREMISES EQUIPMENT TO PRIVATE LINE SERVICES	
 8.1 CONNECTIONS OF TERMINAL EQUIPMENT, PRIVATE BRANCH EXCHANGE SYSTEMS AND COMMUNICATIONS SYSTEMS (Cont'd) 8.1.5 CONNECTIONS OF CUSTOMER PROVIDED TERMINAL EQUIPMENT NOT SUBJECT TO z F.C.C. REGISTRATION PROGRAM (Cont'd) G. ACOUSTIC OR INDUCTIVE CONNECTIONS (Cont'd) 2. Minimum Protection Criteria (Cont'd) 	
b. To protect other services, it is necessary that the signal applied by (T) the customer provided equipment to the Standard Network Interface located at the Utility's local loop demarcation point on the customer's (T) premises meet the following limits at the output of the network control signaling unit:	
(1) The power in the band from 3,995 Hertz to 4,005 Hertz shall be at least 18db below the power of the signal as specified in a. preceding.	
(2) The power in the band from 4,005 Hertz to 10,000 Hertz shall not exceed 16db below one milliwatt.	
(3) The power in the band from 10,000 Hertz to 25,000 Hertz shall not exceed 24db below one milliwatt.	
(4) The power in the band from 25,000 Hertz to 40,000 Hertz shall not exceed 36db below one milliwatt.	
(5) The power in the band above 40,000 Hertz shall not exceed 50db below one milliwatt.	
c. Where there is connection to telecommunications service, to prevent the interruption or disconnection of a call or interference with network (T) control signaling, it is necessary that the signal applied by the customer provided equipment to the Utility provided voice transmitting z and receiving equipment, be limited so that the signal at the output of the Utility provided voice transmitting and receiving equipment shall at z no time have energy solely in the 2450 to 2750 Hertz band. If there is a signal power at the output of the Utility provided voice transmitting z and receiving equipment in the 2450 to 2750 Hertz band, it must not exceed the power present at the same time in the 800 to 2450 Hertz band.

Executive Director

Date Filed: March 4, 1985 Effective: April 18, 1985 Resolution No.

B8. CONNECTIONS OF PREMISES EQUIPMENT TO PRIVATE LINE SERVICES

- 8.1 CONNECTIONS OF TERMINAL EQUIPMENT, PRIVATE BRANCH EXCHANGE SYSTEMS AND COMMUNICATIONS SYSTEMS (Cont'd)
- 8.1.14 CONNECTIONS OF SERVICES FURNISHED BY THE TELEPHONE COMPANY WITH SERVICE OF OTHER COMMON CARRIERS
 - A. REGULATIONS
 - 1. General Provisions

Communications systems provided by an Other Common-Carrier (listed in Schedule Cal.P.U.C. No. B8.1.14,A.7) to a customer, authorized user or joint user of private line service or channels furnished by the Utility may be connected with such private line service or channels as specified in Schedule Cal.P.U.C. Nos. A2. and A8.

2. Responsibility of the Utility

The Utility shall not be responsible for the installation, operation or maintenance of any Other Common Carrier provided communications systems. z The facilities of the Utility are not represented as adapted to the use of Other Common Carrier provided systems. Where such systems are connected (T) to Utility facilities, the responsibility of the Utility shall be limited to the furnishing of facilities suitable for private line services or (T) channels and to the maintenance and operation of such facilities up to and including the Utility's local loop demarcation point in a manner proper for the service furnished. Subject to this responsibility, the (T) Utility shall not be responsible for:

- a. The through transmission of signals generated by the Other Common Carrier provided systems or for the quality of or defects in such transmission or;
- b. The reception of signals by Other Common Carrier provided systems or;
- c. Network control signaling where such signaling is performed by Other Common Carrier provided network control signaling equipment.

The Utility shall not be responsible to the customer or otherwise if changes in minimum network protection criteria as stated in Schedule Cal.P.U.C. No. B8.1.5 or in any of the facilities, operations or procedures of the Utility, render any Other Common Carrier provided facilities obsolete or require modification or alteration of such equipment or otherwise affect its use or performance.

B8. CONNECTIONS OF PREMISES EQUIPMENT TO PRIVATE LINE SERVICES

- 8.1 CONNECTIONS OF TERMINAL EQUIPMENT, PRIVATE BRANCH EXCHANGE SYSTEMS AND COMMUNICATIONS SYSTEMS (Cont'd)
- 8.1.14 CONNECTIONS OF SERVICES FURNISHED BY THE TELEPHONE COMPANY WITH SERVICE OF OTHER COMMON CARRIERS (Cont'd)
 - A. REGULATIONS (Cont'd)
 - 3. Responsibility of the Customer

Where service, as set forth in the Utility tariff schedules, may be used in connection with Other Common Carrier provided communications systems, the operating characteristics of such systems shall be such as not to interfere with any of the services offered by the Utility. Such use is subject to the further provisions that the Other Common Carrier provided communications systems do not: endanger the safety of the Utility employees or the public; damage, require change in or alteration of the equipment or other facilities of the Utility; interfere with the proper functioning of such equipment or facilities; impair the operation of private line service or channels or other facilities, or otherwise injure the public in its use of the Utility's services.

Upon notice from the Utility that the Other Common Carrier provided system is causing or is likely to cause hazard or interference, the customer shall arrange with the Other Common Carrier to make such change as shall be necessary to remove or prevent such hazard or interference.

The customer shall be responsible for payment of a visit charge as set forth in Schedule Cal.P.U.C. No. A8.3.1 for visits by the Utility to the premises of the customer where the service difficulty results from the use of equipment, facilities or services provided by an Other Common Carrier.

4. Network Control Signaling

Where Other Common Carrier provided communications systems are connected to switching equipment provided by the Utility and the Other Common Carrier provided system is arranged to be connected to facilities furnished by the Utility for private line service and there is connection of such facilities to the exchange and message toll network or to a Centrex system, the connection shall be such that network control (D) signaling functions (except customer provided tone-type address signaling through a Utility provided or Other Common Carrier provided connecting arrangement) are performed by equipment furnished, installed and maintained by the Utility or by the Other Common Carrier.

Executive Director

Date Filed: March 24, 2006 Effective: April 24, 2006 Resolution No.

B8. CONNECTIONS OF PREMISES EQUIPMENT TO PRIVATE LINE SERVICES
 8.1 CONNECTIONS OF TERMINAL EQUIPMENT, PRIVATE BRANCH EXCHANGE SYSTEMS AND COMMUNICATIONS SYSTEMS (Cont'd) 8.1.14 CONNECTIONS OF SERVICES FURNISHED BY THE TELEPHONE COMPANY WITH SERVICE OF OTHER COMMON CARRIERS (Cont'd)
A. REGULATIONS (Cont'd)
5. Regulations for Connections of Other Common Carrier Provided z Communications Systems
The Utility will provide private lines or channels for the origination or (T) termination of communications of Other Common Carrier communications systems to the Utility's local loop demarcation point at the customer's (authorized user's or joint user's) premises. Other Common Carrier communications systems may be connected to the Utility's private lines or channels provided that:
a. The normal mode of operation of the Other Common Carrier provided z communications system shall be to provide communications originating or terminating at the premises where the connection is made.
b. The private line service or channels provided by the Utility are voice grade.
c. Where the connection with the Other Common Carrier provided z communications system involves direct electrical connection to the facilities furnished by the Utility for private line service or channels, such connection shall be made through switching equipment provided by the customer, authorized user, joint user, the Utility or by the Other Common Carrier.
d. Where the connection is made by means of switching equipment provided by the customer, authorized user or joint user such switching equipment and the facilities provided by the Other Common Carrier shall be treated as a customer provided communications system and the regulations in Schedule z Cal.P.U.C. No. B8.1.5,D. and F. shall apply.
e. Where the connection of an Other Common Carrier provided communications z system is by means of an acoustic or inductive connection, such connection shall be made externally to Utility provided voice z transmitting and receiving equipment.

- 8.1.14 CONNECTIONS OF SERVICES FURNISHED BY THE TELEPHONE COMPANY WITH SERVICE OF OTHER COMMON CARRIERS (Cont'd)
 - A. REGULATIONS (Cont'd)
 - 8. Violation of Regulations

Where any Other Common Carrier provided system is connected to private line service or channels in violation of the provisions in Schedule Cal.P.U.C. No. B8.1.1, the Utility will take such immediate action as necessary for the protection of its facilities, and will promptly notify the customer of the violation. The customer shall correct the violation and shall confirm in writing to the Utility within 10 days, following the receipt of written notice from the Utility, that such violation has been corrected. Failure of the customer to discontinue such use or to correct the violation and to give the required written confirmation to the Utility within the time stated above shall result in discontinuance of the customer's service involved with the violation in accordance with Schedule Cal.P.U.C. No. A2.1.11.

If, after confirming to the Utility in writing that the violation has been corrected, the customer again uses such equipment or system in violation of the provisions in Schedule Cal.P.U.C. No. B8.1.1, the Utility shall disconnect the customer's service involved with the violation. Such disconnect shall take place as soon as practicable after the customer receives verbal, in person or written notification of the Utility's intention to disconnect said service.

 8.1 CONNECTIONS OF TERMINAL EQUIPMENT, PRIVATE BRANCH EXCHANGE SYSTEMS AND COMMUNICATIONS SYSTEMS (Cont'd) 8.1.15 CONNECTIONS OF CUSTOMER PROVIDED TEST EQUIPMENT (Cont'd) A. REGULATIONS (Cont'd) 2. Interim Program for Connections of Customer Provided Test Equipment z (Cont'd)
f. No customer provided test equipment or combination of test equipment with z terminal equipment, protective circuitry or multiline terminating systems may cause electrical hazards to Utility personnel, damage to Utility equipment, malfunction of Utility billing equipment or degradation of service to persons other than the user of the subject test equipment or the user's calling or called party.
3. Institutional Procedures for Signal Power Control
a. In accordance with 2.d. preceding, the customer must comply with the following Institutional Procedures:
The customer must install, operate and maintain the test equipment so that its signal power at the private line interface complies with (T) Subpart D of Part 68 of the F.C.C.'s Rules and Regulations.
The operator(s)/maintainer(s) responsible for the test equipment signal power present at the private line interface must be trained to perform (T) these functions by successfully completing one of the following:
(1) A training course provided by the manufacturer of the test equipment or
(2) A training course provided by the customer, or authorized representative of the customer, using training materials and instructions provided by the manufacturer of the test equipment or
(3) An independent training course (e.g., trade school or technical institution) recognized by the manufacturer of the test equipment or
(4) In lieu of the preceding training requirements, the operator(s)/maintainer(s) is under the control of a supervisor trained in accordance with (1) through (3) preceding. Upon request, the customer is required to provide proper documentation to demonstrate compliance with the requirements in this Section 3.a.

8.1.16 CONNECTIONS OF CERTAIN FACILITIES OF THE U.S. GOVERNMENT EXECUTIVE DEPARTMENTS AND AGENCIES	
A. REGULATIONS	
1. The provisions of Schedule Cal.P.U.C. No. A8.1.11 apply to terminal equipment and communications systems connected to those private line services specified in Schedule Cal.P.U.C. No. B8.1.2.	
2. Equipment of a Department or Agency of the Executive Branch of the U.S. Government used for the purpose of disguising or concealing the contents or meaning of communications may, in lieu of the provisions of Schedule Cal.P.U.C. Nos. B8.1.3 and B8.1.5,D.4. be connected to Utility private line telephone or teletypewriter station equipment, or to Utility private line telephone or teletypewriter facilities in lieu of such station equipment, subject to the regulations stated below.	
a. The head of the Department or Agency whose equipment is to be connected or their authorized representative, shall notify the Utility in writing that such connection is necessary to safeguard official information which requires protection in the interests of national defense, or other confidential official information, disclosure of which to unauthorized persons would be detrimental to the public interest.	
b. The connection shall be made by means of connecting equipment or arrangements furnished by the Utility.

Executive Director

Date Filed: May 10, 1993

B8. CONNECTIONS OF PREMISES EQUIPMENT TO PRIVATE LINE SERVICES

- 8.1 CONNECTIONS OF TERMINAL EQUIPMENT, PRIVATE BRANCH EXCHANGE SYSTEMS AND COMMUNICATIONS SYSTEMS (Cont'd)
- 8.1.17 CONNECTIONS OF CUSTOMER-PROVIDED TERMINAL EQUIPMENT OR MULTILINE TERMINATING SYSTEMS TO UTILITY ENTRANCE FACILITIES
 - A. REGULATIONS
 - Entrance facilities which extend customer-provided voice grade communication channels may be connected at either a service point of the customer or authorized user or through Centrex-CO switching equipment which serves such service point to exchange and toll facilities to form a through connection through switching equipment furnished by the customer, authorized user or the Utility and through a network control signaling unit and connecting arrangement furnished, installed and maintained by the utility.

Customer-provided channels extended in entrance facilities may be connected to:

- a. Other customer-provided channels extended in entrance facilities provided to the same customer or authorized user either at the same service point or through Centrex-CO switching equipment which serves such service point.
- b. Private line services or channels of voice grade or lower provided to the same customer or authorized user either at the same service point or through Centrex-CO switching equipment which serves such service point.

The connection shall be made through switching equipment provided by the customer, authorized user or the Utility.

- 2. Customer-provided communications channels may be connected with entrance facilities furnished by the Utility for the purpose of extending the customer-provided communications channels to a service point of the customer or authorized user. The connection shall be through connecting arrangements furnished, installed and maintained by the Utility. The customer-provided channels shall comply with the minimum protection criteria in 4.a. following.
- 3. Entrance facilities may be connected at a customer or authorized user service point to customer-provided transmitting and receiving terminal equipment or to customer-provided multiline terminating systems for the purpose of communicating with transmitting and receiving terminal equipment located on the premises on which the service point is located. The connection shall be through connecting arrangements furnished, installed and maintained by the Utility. The customer-provided terminal equipment or multiline terminating systems shall comply with the minimum protection criteria in 4.b. following.

B8. CONNECTIONS OF PREMISES EQUIPMENT TO PRIVATE LINE SERVICES

- 8.1 CONNECTIONS OF TERMINAL EQUIPMENT, PRIVATE BRANCH EXCHANGE SYSTEMS AND COMMUNICATIONS SYSTEMS (Cont'd)
- 8.1.17 CONNECTIONS OF CUSTOMER-PROVIDED TERMINAL EQUIPMENT OR MULTILINE TERMINATING SYSTEMS TO UTILITY ENTRANCE FACILITIES (Cont'd)
 - A. REGULATIONS (Cont'd)
 - 4. To protect Utility facilities and the services furnished to the general public by the Utility from harmful effects, the signals applied to Utility facilities by customer-provided terminal equipment or communications systems, must comply with the following minimum protection criteria.
 - a. Where customer-provided communications channels are connected to entrance channels for the purpose of extending the customer-provided channel to a service point of the customer, or authorized user, the following minimum protection criteria apply:
 - (1) To prevent excessive noise and crosstalk, it is necessary that the power of the signal which is applied by the customer-provided channel at the Utility-provided interface not exceed 13db below one milliwatt, referenced to the 0 transmission level point, when averaged over any three-second interval.
 - (2) To protect other services it is necessary that the signal which is applied by the customer-provided channel to the Utility four-wire interface meet the following limits:
 - The power in the band from 3,995 Hertz to 4,005 Hertz shall not exceed 18db below the power of the signal as specified in (1) preceding.
 - The power in the band from 4,005 Hertz to 10,000 Hertz shall not exceed 16db below one milliwatt.
 - The power in the band from 10,000 Hertz to 25,000 Hertz shall not exceed 24db below one milliwatt.
 - The power in the band from 25,000 Hertz to 40,000 Hertz shall not exceed 36db below one milliwatt.
 - The power in the band above 40,000 Hertz shall not exceed 50db below one milliwatt.

 8.1 CONNECTIONS OF TERMINAL EQUIPMENT, PRIVATE BRANCH EXCHANGE SYSTEMS AND COMMUNICATIONS SYSTEMS (Cont'd) 8.1.18 CONNECTING ARRANGEMENTS APPLICABLE TO PRIVATE LINE SERVICES AND CHANNELS (Cont'd) F. ENTRANCE CHANNELS (Cont'd) 1. General (Cont'd) a. Description (Cont'd)
(2) Utility facilities are furnished only in the approximate bandwidth of 300-3000 Hertz.
b. In addition to the regulations set forth in Schedule Cal.P.U.C. No. B8.1.1, the following applies:
(1) These Utility facilities are furnished to extend customer-provided communications channel, voice grade or less, to a customer or authorized user service point or to Centrex-CO switching equipment serving the service point of the customer or authorized user for use at such service point located 25 airline miles or less from the point at which the customer-provided communications channel is connected to the Utility entrance facility.
(2) Rates for Utility entrance facilities have been filed in this schedule on a case-by-case basis. Items F.2.a. through and including j.(a) may remain in service under tariff rates, charges and regulations as shown, so long as customer requested moves and changes do not cause the Utility to make a change in the recurring costs.
(3) Rates for entrance channels requested after April 1, 1983, will be found in Schedule Cal.P.U.C. No. B3.2.10 Series 10000 Channels.
(4) Utility facilities found in this tariff are for use with privately owned customer communications systems or channels. Common Carriers authorized to operate by Federal, State or other Regulatory Agencies, as appropriate, and requiring such channels for their patrons, must use channels provided for Facilities for Other Common Carriers as shown in Schedule Cal.P.U.C. No. 175-T.

B8. CONNECTIONS OF PREMISES EQUIPMENT TO PRIVATE LINE SERVICES

- 8.1 CONNECTIONS OF TERMINAL EQUIPMENT, PRIVATE BRANCH EXCHANGE SYSTEMS AND COMMUNICATIONS SYSTEMS (Cont'd)
- 8.1.18 CONNECTING ARRANGEMENTS APPLICABLE TO PRIVATE LINE SERVICES AND CHANNELS (Cont'd)
 - G. INSTITUTIONAL PROGRAM FOR PREMISES WIRING
 - 1. In accordance with FCC Rules, Parts 68.215 (g)(1) and 68.215 (f)(4) the Utility may monitor or participate in the acceptance testing required if:
 - a. The affidavit information gives reason to believe a violation of Part 68 of the FCC Rules is likely, or,
 - b. A failure has occurred during acceptance testing for imbalance, or,
 - c. A harm has occurred which is reasonably believed to be the result of the installation, connection, reconfiguration and/or partial removal wiring operations performed.
 - If none of the conditions referred to in 1. above is present, but it is an initial installation of other than fully protected premises wiring, the Utility may monitor or participate in acceptance testing required (See FCC Rules, Part 68.215 (g)(2)).
 - 3. Subject to the qualifying conditions listed in 1. and 2. above, the Utility may inspect the other than fully protected wiring and all insulation removal points, to determine compliance with FCC Rules, section 68.215 requirements (see FCC Rules, Part 68.215 (g)(3)), but
 - a. If the inspection is during the initial installation of unprotected wiring, the Utility may only require withdrawal of up to 5% of the wiring run concealed in ducts, conduits or wall spaces to determine conformance of the wiring to the affidavit information (see FCC Rules, Part 68.215 (g)(3)(i)).
 - b. When the inspection is after a failure of acceptance testing of unprotected wiring or after a harm has resulted from installed unprotected wiring, the Utility may require withdrawal of all wiring run concealed in ducts, conduits or wall spaces which reasonably could have caused the failure or harm, to determine conformance with the affidavit information (see FCC Rules, Part 68.215 (g)(3)(ii)).
 - c. When the wiring in question is partially protected, the Utility may inspect only exposed wiring, unless an actual harm has occurred, or an acceptance test failure condition has not been corrected within a reasonable time (see FCC Rules, Part 68.215 (h)(2)).

- 8.1 CONNECTIONS OF TERMINAL EQUIPMENT, PRIVATE BRANCH EXCHANGE SYSTEMS AND COMMUNICATIONS SYSTEMS (Cont'd)
- 8.1.18 CONNECTING ARRANGEMENTS APPLICABLE TO PRIVATE LINE SERVICES AND CHANNELS (Cont'd)
- H. SPECIAL ASSEMBLY EXCHANGE TELEPHONE SERVICE CHANNELS FOR CUSTOMER-PROVIDED COMMUNICATIONS SYSTEMS (Cont'd)

2. The following special assembly exchange telephone service duplex channels USOC ZZZTP, are furnished for voice communication and for the simultaneous transmission of direct current signals with direct current continuity between 2900 Semiconductor Drive, Building D, Santa Clara and the following addresses:

165 San Gabriel Drive, Sunnyvale	1050-J East Duane Avenue, Sunnyvale
175 North Wolf Road, Sunnyvale	2925 Copper Road, Sunnyvale
1177 Kern Avenue, Sunnyvale	111 Uranium Drive, Sunnyvale
1135 Kern Avenue, Sunnyvale	675 Almanor Avenue, Sunnyvale
635 Vaqueros Drive, Sunnyvale	

These channels are furnished only between the switching equipment of the customer-provided communications system at 2900 Semiconductor Drive, Building D, Santa Clara, in the Sunnyvale exchange and associated customer-provided terminal equipment on noncontinuous property. The channels will terminate at a single common terminal location at each off-premises location. The customer will provide all inside wiring from this terminal to the customer-provided terminal equipment.

Each such channel will be furnished at charges equivalent to the nonrecurring charges and to twice the monthly rates as specified for (T) Voice Grade channels in Schedule Cal.P.U.C. No. 175-T, Section 7.5.3. (T)

Since such use requires that the channels be furnished between the service points entirely by metallic wire facilities, such channels will be furnished where such facilities are normally available between the service points.

The offering of such channels does not contemplate the placement of new metallic wire facilities for this purpose only, rearrangements of other services on an existing route, or the provision of service over any route other than that over which the Utility would normally furnish the channel. In addition, the provision of such channels does not restrict the Utility's right to convert any route to carrier facilities in the future. In such cases, customers furnished such channels by means of metallic facilities will be given reasonable advance notice of such change.

The Utility does not represent or guarantee that such channels will be compatible with, or adaptable to, any particular type of customer-provided communications system.
