B3. ANALOG SERVICES

3.1 GENERAL (Cont'd)

3.1.4 MILEAGE MEASUREMENT (Cont'd)

C. SERIES 6000 PROGRAM CHANNELS

1. Mileage Measurement

a. Intrawire Center Channels - (Type F Channels)

The intrawire center mileage is the airline distance (fractional quarter miles being considered as full quarter miles) measured directly between two customer premises or between a customer's premises and the Utility's wire center.

b. Interwire center Channels (Types A,B,C,D, and E)

(1) Two-point Channels

The rate mileage is the airline distance between the wire centers determined in accordance with The National Exchange Carrier Association (NECA) Tariff F.C.C. No. 4, Sections 11 and 16. For information on how to obtain copies of the NECA Tariff see Section 14 following. (N)

(2) Multi-point Channels

When a channel involves more than two points, the total interwire center mileage is the shortest airline mileage connecting the wire centers for the service points involved, which will meet the service requirements of the customer, each section being determined as specified in (1), preceding.

B3. ANALOG SERVICES

3.1 GENERAL (Cont'd)

3.1.4 MILEAGE MEASUREMENTS (Cont'd)

D. SERIES 6000 ONE-WAY PROGRAM TRANSMISSION NETWORK CHANNELS

1. Intrawire Center Channels

a. Transmitting and Receiving Channels

The channel mileage is the airline distance from each customer location to its serving central office. Each channel is measured separately, a fractional quarter mile being considered as a whole quarter mile.

- b. Where there are two or more serving central offices in the same building, they are treated as one in determining the channel charges.

2. Interwire Center Channels

a. Two-point Channels

The rate mileage is the airline distance between the wire centers determined in accordance with The National Exchange Carrier Association (NECA) Tariff F.C.C. No. 4, Sections 11 and 16. For information on how to obtain copies of the NECA Tariff see Section 14 following. (N)

b. Multi-point Channels

The interwire center channel mileage is the shortest airline distance connecting the serving central office of the transmitting station and all serving central offices involved in the same wire center. The principal central office of that wire center is considered a serving central office when interwire center channels are furnished. The distance between each two serving central offices along the pricing route is measured separately with fractional miles in each section being considered as whole miles.

When a channel involves more than two points, the total interwire center mileage is the shortest airline mileage connecting the wire centers for the service points involved, which will meet the service requirements of the customer, each section being determined as specified in a., preceding.

When a network serves wire centers other than the wire center in which the transmitting station is located, the principal central office of each such other wire center connected to the network is treated as though it were the serving central office of a transmitting station in determining the interwire center channel mileages.

Where there are two or more serving central offices in the same building, they are treated as one in determining interwire center channel mileage.

3.1 GENERAL (Cont'd)

3.1.5 NONRECURRING MOVE AND CHANGE CHARGES

Series 6000 and 7000¹ (T)

A change in termination from one series type to another series type at the customer's request will be treated as a new installation.

Moves and changes of channel termination wiring on the premises of the customer or authorized user at the customer's request will be subject to the following nonrecurring charges.

3.1.6 JOINT USER ARRANGEMENTS¹

(T)

In addition to the general regulations and definitions applicable to Private Line Services set forth in Schedule Cal.P.U.C. No. B2., General No. B2., General Regulations, regulations set forth throughout this Schedule also apply.

- A. Joint user arrangements are offered for use by one or more joint users on individual circuits.
- B. Joint user arrangements are offered on Metallic, Telegraph Grade and Voice Grade Services found in Schedule Cal.P.U.C. No. 175-T, Section 7.
- C. A joint user must have a termination on the private line and the termination must be located on the premises on the joint user.
- D. The Utility shall not be responsible for the manner in which the joint use of the service will be allocated. Orders which involve the start rearrangement, release, or discontinuance of service will be accepted by the Utility only from the customer or his agent.
- E. Where a customer requests that a service be arranged for joint use, the charges for the service shall be determined as provided in this schedule, including the joint user arrangement charge in Rates.
- F. All charges for the circuit, including the charges for the joint use arrangement, channel terminations, channel mileage, and optional features and functions furnished for the joint users as part of the private line service, will be computed as though the service were to be billed to the customer. The customer and each joint user will be billed for the components of the service which are furnished exclusively to each of them for their individual use. The charges for components of the service which are not used exclusively by a customer or a joint user will be allocated for billing purposes in accordance with percentages of use specified by the customer. For each service only a single percentage shall be specified for each joint user and shall remain in effect for a minimum of one month and such percentages on file on the first day of the customer's billing cycle will be used in computing that month's billing. Without affecting the customer's ultimate responsibility for payment of all charges for the service, each joint user shall be responsible for the payment of the charges billed to them in accordance with this subparagraph.

3.2 CLASSIFICATION AND RATES (Cont'd)

3.2.2 VOICE GRADE (VOICE)

A. DESCRIPTION

1. Type 2001 (VG32)

- a. Private line telephone service uses channel facilities used to connect customer-provided terminal equipments or communications systems to other terminal equipments. Such facilities are furnished to enable the customer, or the customer and authorized user, to communicate orally between specified locations. Such facilities are furnished only between different premises.
- b. Private line voice service is that of providing the requisite facilities to enable the customer or the customer and authorized user to communicate orally between specified locations.
- c. The channels used for private line voice service are exclusive of those furnished under the exchange service schedules of the Utility.
- d. Analog Special Services - Voice (Type 2001) - Approximate bandwidth of 300-3000 Hertz. Furnished for voice transmission on a half-duplex basis.

- e. Extension Service¹ (T)

Extension service is that of furnishing facilities for authorized connection to an interwire center private line telephone circuit furnished to a branch or agency of the United States Government for the collection and dissemination of information relating to air traffic control activities and similar information of public interest in connection with supervision of the flight of aircraft along civil airways.

Extension service is furnished twenty-four hours per day, seven days per week, for a minimum period of one month.

Allowance for service interruptions is as provided in Schedule Cal.P.U.C. No. A2.1.14.

NOTE 1: Frozen/Grandfathered Service - See General Regulations, Schedule (N)

3.2 CLASSIFICATION AND RATES (Cont'd)

3.2.3 VOICE GRADE (DATA) (T)

A. DESCRIPTION (T)

This schedule contains the rates, charges and regulations applicable to Type 3001, 3007 and 3009 (VG36) services for remote metering, supervisory control, miscellaneous signaling and voice frequency monitoring purposes, and to series Type 3002 (VG36) services for data transmission. (T)

1. Metering, Control and Signaling Channels - Type 3001, 3007 and 3009

a. Type 3001 and 3009 for remote metering, supervisory control, miscellaneous signaling and voice frequency monitoring purposes are facilities suitable for connecting metering, supervisory control, signaling and voice monitoring equipment, provided by the customer, and are furnished between specified locations.

b. Type 3001 and 3009 are furnished for such purposes as to indicate the readings of meters at distant locations, to operate switches which in turn perform some desired operation, to operate signal devices or for voice monitoring. The purposes for which a service is to be used must be made known to the Utility.

c. Type 3007 channels are furnished specifically for alarm service monitoring and metering and are suitable for connecting metering and monitoring equipment provided by the customer. (See B.1.o. following)

d. Channel Types (T)

(1) Type 3001 (VG36) (T)

Approximate bandwidth of 300-3000 Hertz with transmission characteristics similar to those of private line telephone service. Furnished for remote metering, supervisory control and miscellaneous signaling purposes with overall installed loss of - 16 db (\pm 1db). Type 3001 services are suitable for the transmission of tones. They are also suitable to be equipped for direct current continuity where facilities are available.

(2) Type 3007 (VG36) (T)

A basic, non-designed two-point voice grade circuit with transmission characteristics similar to those of private line telephone service. This channel provides for the transmission of half duplex service with an approximate bandwidth of 300-3000 Hertz. (See B.1.o. following)

3.2 CLASSIFICATION AND RATES (Cont'd)

3.2.6 SERIES 6000 CHANNELS

A. TYPES AND DESCRIPTION

This schedule contains the rates and regulations applicable to:

Series 6000 One-Way Program Transmission Network Channels for one-way program transmission networks in connection with loudspeakers

and

Series 6000 Program Channels for program transmission in connection with loudspeakers, sound reproduction or sound recording.

1. One-Way Program Transmission Network Channels

- a. Channels for One-Way Program Transmission Network in connection with loudspeakers are channel facilities suitable for one-way transmission of music and speech, from transmitting equipment to loudspeakers, provided by the customer, and are furnished between specific locations.
- b. The channel facilities are intrastate facilities furnished in situations where a customer desires to transmit programs from a transmitting station to a group of receiving stations, generally within the same wire center area, interconnected at all times to form a distinct operating network. The channel facilities are not provided as a substitute for individual type channels for program transmission, neither will they be connected with such individual type channels for program transmission facilities nor with facilities furnished in connection with exchange, message toll, private line telephone service, or channels for one-way speech networks. The channel facilities furnished hereunder may be connected with loudspeaker paging systems.
- c. Transmitting Station Channels

Provided within a wire center area between the customer's transmitting station and the serving central office.
- d. Receiving Station Channels

Provided within a wire center area between each customer's receiving station and the serving central office.

3.2 CLASSIFICATION AND RATES (Cont'd)

3.2.6 SERIES 6000 CHANNELS (Cont'd)

A. TYPES AND DESCRIPTION (Cont'd)

1. One-Way Program Transmission Network Channels (Cont'd)

e. Station Channel Extensions

Provided to extend a channel location on the same premises on which the channel terminates. They may be provided by the Utility at the customer's request and expense in lieu of station wiring. (T)

f. Intrawire Center Channels

Provided to connect the serving central office of a customer's transmitting station and all other serving central offices of the network in the same wire center; also to connect the serving central office of the customer's transmitting station and the principal central office of the same wire center for transmission of programs to other wire centers and to connect the principal central office of each such other wire center receiving programs, with all other serving central offices involved in that wire center.

g. Interwire Center Channels

Provided between the wire centers in which the stations of a network are located.

Type 6005 and Type 6004 interwire center channels (for full-time and part-time use,) are provided for transmission of program material, within a frequency range of approximately 100 to approximately 5,000 hertz, provided between the wire centers in which the customer's stations of a network are located. Type 6007 and Type 6006 interwire center channels (for full-time and part-time use, respectively,) are provided for transmission of program material within a frequency range of approximately 50 to approximately 8,000 hertz.

2. Program Channels

- a. Channels for program transmission in connection with loudspeakers, sound reproduction or sound recording are channel facilities suitable for connecting sound reproduction or sound recording apparatus owned by the customer and are furnished between specific locations at the customer's request and expense. (T)

b. Intrawire Center Channels (Type F)

The rates and charges for intrawire center channels provide for program channel facilities within a wire center area between stations, or between stations and the point of connection with interwire center channels.

3.2 CLASSIFICATION AND RATES (Cont'd)

3.2.6 SERIES 6000 CHANNELS (Cont'd)

A. TYPES AND DESCRIPTION (Cont'd)

2. Program Channels (Cont'd)

c. Interwire Center Channels (Including Receiving, Transmitting and Bridging Connections)

- (1) Type A: The rates and charges for Type A (6005) channels provide for the full-time use of a program transmission, with individual operation and supervision, for the high quality transmission of music and speech. They cover the provision of interwire center channels and services, including receiving and transmitting connections.
- (2) Type B: The rates and charges for Type B (6004) channels provide for the part-time use of the program transmission, with individual operation and supervision, for the high quality transmission of music and speech. They cover the provision of interwire center channels and services, including receiving and transmitting connections.
- (3) Type C: The rates and charges for Type C (6003) channels provide for the part-time use of program transmission without individual operation and supervision, for the medium quality transmission of music and speech. Transmission limitations permit the use of these channels only over limited distances. The rates and charges cover the provision of interwire center channels and services including bridging connections.
- (4) Type D: The rates and charges for Type D (6002) channels provide for the part-time use of program transmission facilities, without individual operation and supervision, for the medium quality transmission of music and speech. Transmission limitations permit the use of these channels only over limited distances. The rates and charges cover the provision of interwire center channels and services including bridging connections.
- (5) Type E: The rates and charges for Type E (6007) channels provide for the part-time use of program transmission facilities, suitable for the transmission of speech only. They cover the provision of interwire center channel facilities and services including bridging connections. The number of Type E facilities is limited by operating and transmission factors.

(T)

3.2 CLASSIFICATION AND RATES (Cont'd)

3.2.6 SERIES 6000 CHANNELS (Cont'd)

B. REGULATIONS

1. One-Way Program Transmission Network Channels

- a. The general regulations and definitions applicable to private line services and channels set forth in Schedule Cal.P.U.C. No. B2. also apply to One-Way Program Transmission Network Channels.
- b. Channels especially equipped for program transmission networks in connection with loudspeakers are furnished for transmission of speech and music in one direction from a transmitting station to one or more receiving stations.
- c. Channel networks will be furnished for 16 or more hours per day, seven days per week.
- d. Station Apparatus

All station equipment and station wiring, other than any equipment necessary for the suitable termination of the channel on the premises of the customer or authorized users and other than station channel extensions furnished by the Utility, shall be provided by the customer. Program channel wiring on the property owned or leased by the customer may be included as station wiring. The use of transmitting equipment and loudspeakers furnished by the customer is the entire responsibility of the customer and the Utility assumes no obligation with respect thereto.

e. Interconnection of Networks

Separate networks of the same customer, either interwire center or intrawire center, may be interconnected by the customer if desired. Interconnection of networks of different customers is not permitted.

f. Coordinating Facilities

Any of the services of the Utility used for coordinating purposes are charged for at the scheduled rates applicable.

3.2.6 SERIES 6000 CHANNELS (Cont'd)

B. REGULATIONS (Cont'd)

1. One-Way Program Transmission Network Channels (Cont'd)

g. Switching Arrangements

Switching arrangements will be provided whereby the customer may interconnect two or more separate networks of the customer, where facility conditions permit. Additional installation and monthly charges are applicable based on cost. Charges are determined independently for each network connected to a switching arrangement.

h. Mileage measurement is the airline distance as stated in B3.1.4,D.

2. Program Channels

a. The general regulations and definitions applicable to private line services and channels set forth in Schedule Cal.P.U.C. No. B2. also apply to Program Channels.

b. Channels specially equipped and operated for program transmission in connection with loudspeakers, sound reproduction or sound recording are furnished for the transmission in one direction of music or speech, but not for communication purposes other than those necessary and incidental to the selection and rendition of the program. Transmission in the opposite direction as provided by reversing the direction of transmission of the channels, where practicable or by furnishing additional channels.

c. Where facilities permit, the customer may use channels furnished by the Utility to transmit more than one tone in sequence or simultaneously for record ordering, coin collection or remote control and indication purposes. Also, for such purposes, the customer may use Type F channels (without amplifiers) between two stations to create channels for direct current transmission.

d. The channels covered in this schedule are intrastate channels furnished by the Utility for program transmission in connection with loudspeakers, sound reproduction or sound recording. Channels furnished in connection with exchange, message toll or private line telephone service may not be connected with program transmission channels nor be connected directly or indirectly with loudspeaker, sound reproduction or sound recording equipment at customer's stations. Channels furnished for program transmission in connection with loudspeakers may be connected with loudspeaker paging systems.

3.2.6 SERIES 6000 CHANNELS (Cont'd)

B. REGULATIONS (Cont'd)

2. Program Channels (Cont'd)

e. Minimum Contract Period

The minimum contract term is as indicated in the rates for channels except when the cost of construction is such as to necessitate a longer contract period. In the latter case, the Utility may require execution of a contract with a greater minimum period.

f. Receiving, Transmitting and Bridging Connections

Receiving, transmitting or bridging connection of any of the types of channels furnished may be used, if practicable, in connection with any channels of the same or a lower type with respect to the quality of transmission.

g. Reversal in Transmission

Interwire center channels, intrawire center channels, and transmitting and receiving connections may be used for transmission in the opposite direction, provided it is practicable to reverse the direction of transmission, subject to the charges specified.

h. Switches

- (1) A switch is the operation whereby a section of an existing network (interwire center channel, intrawire center channel) (Type F channels or connection) is disconnected and reconnected to another section of a network.
- (2) Switching includes the provision of switching equipment and services. If additional program equipment and services such as receiving, transmitting or bridging connections, or additional intrawire center (Type F) channels, or interwire center channels are required in connection with the switching operations, they will be furnished at the rates for such items specified in this schedule.
- (3) In connection with Types B and D channels, switching will be done within a single occasion of use if the customer desires, in which case the total elapsed time including the switching time will be charged for. Charges for switches will also be applicable at the charges specified for Type A channels where Type B channels are involved, and at the charges specified for Type C channels where Type D channels are involved.

3.2.6 SERIES 6000 CHANNELS (Cont'd)

B. REGULATIONS (Cont'd)

2. Program Channels (Cont'd)

h. Switches (Cont'd)

(4) No switching charge is made when a new facility or a facility furnished on a part time basis is connected to an existing facility. Neither do switching charges apply to a facility in connection with reversing the direction of transmission of such a facility.

(5) If frequently recurring switches are contracted for in advance, charges based on costs apply.

i. Use of Program Transmission Channels for Monitoring Purposes

(1) A charge per occasion of use will be applied where an interwire center channel is connected to an intrawire center channel (Type F) for monitoring purposes.

(2) When a customer at a station desires to monitor a program being transmitted from another station in order that they may know when to start transmission from their station, any program channels of the customer which are available may be used. Charges at scheduled rates will apply for any services furnished by the Utility to adapt such channel for monitoring purposes.

j. Coordinating Facilities

Any of the services of the Utility used for coordinating purposes are charged for at the scheduled rates applicable.

k. Terminal Equipment

All station equipment and station wiring, other than any equipment necessary for the suitable termination of the channels on the customer's side of the local loop demarcation point, shall be provided by the customer. Program channel wiring on the property owned or leased by the customer and upon which the station is located may be included as station wiring. Amplifying equipment provided by the customer and located at the customer's station may be used, in accordance with Schedule Cal.P.U.C. No. B2., to connect channels of the several types furnished under this schedule. The use of loudspeakers, sound reproduction or sound recording, amplifier, and channel-creating equipment furnished by the customer is the entire responsibility of the customer and the Utility assumes no obligation with respect thereto. 1. Interconnections of Channels of the Same or Different Type

Interconnection Involving Type A Channels

Channels of any of the types provided by the Utility under this schedule may be interconnected with channels of the same or different types provided by the Utility under this schedule or by a connecting company, subject to the following regulations:

- (1) Type A channels may be connected with other Type A channels. Either Type A or Type B rates, whichever are applicable, apply for any additional channels and services required.
- (2) Type B channels may be connected with Type A channels. Type A or Type B rates apply for any additional channels and services required.
- (3) Type C channels may be connected with Type A channels. The charge made for bridging equipment furnished for the interconnection will be that applying for a Type A or Type B transmitting or receiving connection.
- (4) Type D channels may be connected with Type A channels under the same regulations and at the same charges as in (3) preceding.
- (5) Type E channels may be connected with Type A channels as provided in (25) following.
- (6) Intrawire center channels (Type F) may be connected with Type A channels as provided in Interconnections Involving Intrawire Center Channels (Type F) following.

Interconnections Involving Type B Channels

- (7) The connection of Type B with Type A is covered under (2) preceding.
- (8) Type B channels may be connected with other Type B channels. Type B rates apply for any additional channels and services required.
- (9) Type C channels may be connected with Type B channels. The charge made for bridging equipment furnished for the interconnection will be that applying for a Type B transmitting or receiving connection.
- (10) Type D channels may be connected with Type B channels under the same conditions and at the same charges as in (8) preceding.
- (11) Type E channels may be connected with Type B channels as provided in (25) following.
- (12) Intrawire center channels (Type F) may be connected with Type B channels as provided in Interconnections Involving Intrawire Center Channels (Type F) following.

Interconnections Involving Type C Channels

- (13) The connection of Type C channels with Type A channels is covered under (3) preceding.
- (14) The connection of Type C channels with Type B channels is covered under (9) preceding.
- (15) Type C channels may be connected with other Type C channels provided distance (transmission) limitations are not exceeded. Additional charges apply for additional interwire center channels required, at either Type C or Type D rates, whichever are applicable, and bridging connections furnished will be charged for at either Type C or Type D rates, whichever are applicable.
- (16) Type D channels may be connected with Type C channels, provided distance (transmission) limitations are not exceeded. Additional charges apply for additional interwire center channels required, at either Type C or Type D rates, whichever are applicable and bridging connections furnished will be charged for at either Type C or Type D rates, whichever are applicable.

1. Interconnections of Channels of the Same or Different Type (Cont'd)

(25) Type E channels may be connected with network facilities of Types A, B, C and D, and with other Type E facilities. Additional charges, at the scheduled rates applicable, apply for any additional interwire center channel facilities required. Bridging connections furnished to connect the Type E interwire center channel with a network of another type of facilities are provided at Type E facility rates.

(26) Intrawire channels (Type F facilities) may be connected with Type E channels as provided in (25) preceding.

Interconnections Involving Intrawire Center Channels (Type F Channels)

Intrawire center channels (Type F) may be connected with channels of all other types and with other local channels (Type F).

m. Interconnection of Networks

(1) When a network contains channels of more than one of the types, the interwire center mileage will be determined separately for the channels of each type furnished, and the interconnection will be treated as in (2) following.¹

(2) Two or more networks comprising channels of the same or different types will be interconnected at a service point. When so interconnected, the interwire center mileage will be determined separately for each network.

NOTE 1: The term "junction point" indicates an intrawire center or interwire center other than a service point at which it is practicable to interconnect program channels.

B. REGULATIONS (Cont'd)

2. Program Channels (Cont'd)

n. Application of Rates for Fractional Periods

- (1) Rates on a Monthly, Two Weeks or One Week Basis - Types A, B, C, D and F Channels.

Where rates are on a "per month" basis only, the minimum charge will be for one month. Where rates are on a "per month" or "two weeks" basis, the minimum charge will be the rate for two weeks, provided that the period of use does not exceed two weeks. Where rates are on a "per month" or "one week" basis, the minimum charge will be the rate for one week provided that the period of use does not exceed one week; otherwise the minimum charge will be the rate for one month. If the period of use exceeds one month, the charges for fractional months consecutive with the first month will be the proportionate part of the monthly charges based on the actual number of days the channels are furnished.

- (2) Rates on an Hourly Basis - Types A, B, C, D and E Channels

For additional use preceding or succeeding and consecutive with the daily contract period in connection with Type A channels:

A portion of an hour will be charged for as a full hour except that no charge will be made for a period of use not exceeding nine minutes.

For additional use not consecutive with the daily contract period in connection with Type A channels and for each occasion of use in connection with Types B, D and E channels:

When the use exceeds one hour and the rate for the use in excess of one hour is on an hourly basis, a portion of an hour will be charged for as a full hour except that no charge will be made for such use not exceeding nine minutes. Where the rate for the use in excess of one hour is on a fifteen minute basis, a portion of a fifteen minute period will be charged for as a full fifteen minute period except that no charge will be made for such use not exceeding three minutes.

o. Mileage Measurement

Mileage is measured as shown in Schedule Cal.P.U.C. No. B3.1.4,D. for Series 6000 Channels.

3.2.7 SERIES 7000 CHANNELS¹ (T)

This schedule contains the rates, charges and regulations applicable to channels for video transmission in connection with television viewers.

A. CHANNELS FOR VIDEO TRANSMISSION IN CONNECTION WITH TELEVISION VIEWERS

1. General

Channels for video transmission in connection with television viewers are channel facilities suitable for connecting television viewers provided by the customer, and are furnished between specific locations.

The general regulations and definitions applicable to private line channels set forth in Schedule Cal.P.U.C. No. B2. also apply to channels for video transmission in connection with television viewers.

The channel facilities covered in this section are the only intrastate channel facilities furnished by the Utility for video transmission in connection with television viewers; facilities furnished in connection with other channels may neither be connected with video transmission channels nor be connected directly or indirectly with television viewers at customers' stations. Facilities furnished for audio transmission, Series 6000, may be used in providing audio transmission in connection with channels for video transmission.

These channels are not for use in connection with broadcasting by television stations. Broadcast channels are provided under interstate tariffs.

3.2.10 SERIES 10000 CHANNELS¹

(T)

A. DESCRIPTION

Series 10000 channels are furnished by the Utility from a customer transmission source for the purpose of extending customer provided communications systems to a premises of the customer or authorized user or to Centrex Control Switching Equipment serving the premises of the customer. The Utility will terminate Series 10000 channels at the Utility's local loop demarcation point.

Facilities are furnished on a two-point basis only in the approximate bandwidth of 300 - 3000 Hertz for the transmission of voice (Type 29A and 29B) and voice grade data (Type 29C).

The type of facilities furnished in this series and their transmission characteristics are listed in the Bell System Publication No. 43101 which will be made available to a customer on request and without charge.

Type 10001 - Two-point facility between the customer-provided communications system location and the premises of the customer terminating equipment or system for the transmission of voice (Type 29A and 29B) and voice grade data (Type 29C). This facility is furnished in accordance with the specifications described in Bell System Publication No. 43101.

B. REGULATIONS

In addition to the regulations set forth in Schedule Cal.P.U.C. Nos. A2., B1.1.1 and B2. the following regulations apply to Series 10000 channels:

1. The Utility is responsible for the facilities and equipment it provides for these facilities up to and including its local loop demarcation point, and not for the overall circuit design and parameters. End-to-end service responsibility must be assumed by the customer.
2. The intent of this service is to provide only the last link of a customer-provided communications system. The maximum length of the facility is 25 airline miles between the points of connection between the customer-provided communications system and the customer's premises.

3.2 CLASSIFICATION AND RATES (Cont'd)

3.2.10 SERIES 10000 CHANNELS¹ (Cont'd)

(T)

B. REGULATIONS (Cont'd)

3. Requests for entrance channel facilities which have different transmission characteristics and facility specifications than described in Bellcore System Publication No. 43101 will be reviewed on a case-by-case basis. Such facilities may be offered individually at rates and charges based on the actual costs to provide.

4. The use of Type 10001 facilities is restricted to the transmission limitations similar to those set forth for Special Access Voice Grade channels in Schedule Cal.P.U.C. No. 175-T. Section 7.

5. Type 10001 channels are intended to be used to extend a customer-owned communications channel for three principal types of voice band services. These are:

- a. Private Branch Exchange (PBX) tie lines
- b. Point-to-Point circuits between station terminals
- c. PBX off-premises station (OPS) lines.

6. Direct access to the exchange network is not permitted. Connections of Entrance Facilities to other services provided by the Utility must be through either:

- a. Totally protected equipment provided by the customer, or
- b. Fully protected equipment accompanied by a properly notarized affidavit, or
- c. Less than fully protected equipment through a protective connecting arrangement (PCA).

7. Special construction of facilities, if required, is available as specified in Schedule Cal.P.U.C. No. 175-T. Section 15.

8. Credit, when there is a failure of facilities provided by the Utility, will be allowed as stated in Schedule Cal.P.U.C. No. A2.1.14.

9. On or after September 16, 1996, Series 10000 Channels will be grandfathered and provided only to those customers of record as of September 16, 1996. Nonrecurring charges for equivalent capacity of replacement service will be waived through December 15, 1996. Alternative service is Voice Grade Service, Advanced Digital Network (ADN), and Measured Business Lines.

3.2 CLASSIFICATION AND RATES (Cont'd)

3.2.11 SPECIAL ASSEMBLIES

A. GENERAL

1. Applicability

Applicable to special assemblies of equipment to meet special requirements.

2. Regulations

When a customer is furnished special equipment for which provision is not otherwise made, an installation charge and monthly rate and where applicable, a termination charge, will be incurred based upon the total cost of the equipment furnished or of the special work required, subject to the review of such charges by the Public Utilities Commission of the State of California.

a. General

- (1) Rules of the Utility applicable to services with which special assemblies of equipment are associated also apply to the special assemblies of equipment.
- (2) Unless otherwise specified, the rates and regulations for special equipment furnished in this schedule, are in addition to the rates, charges and regulations, applicable to and as filed in other schedules of the tariff for equipment items with which the special assemblies are associated.

b. Basic Termination Charge

If at any time during the termination liability period following installation, a special assembly of equipment is disconnected as a result of a customer request or disconnection of the customer's telephone service in accordance with the Utility's applicable tariffs, the customer will be billed for the basic termination charge as specified under rates and regulations, less a credit, as indicated, of said charge for each month between the date on which said equipment was installed and the date on which it was so disconnected. For purposes of computing that basic termination charge, the last equipment installed shall be considered to be the first equipment removed.

c. Cable Allowance

Unless otherwise specified in rates and regulations of this schedule, a special assembly of equipment requiring cable has included in its rate 100 feet of cable, route measurement, from the equipment item to the Utility's demarcation point or the closest practicable point to the Utility's local loop demarcation point.

(T)

(T)

(N)

(D)

(D)

d. Equipment Located Outside Exchange Areas

Special assemblies of equipment are furnished within the exchange areas of all exchanges as said areas are defined on maps filed as part of the tariff schedules. Special assemblies of equipment may be furnished outside the defined exchange areas where facilities and operating conditions permit, and may be subject to charges in addition to the special assembly provided.

e. Limitations

- (1) Special assemblies of equipment will be furnished where they are compatible with other services furnished by the Utility.
- (2) The Utility will designate the equipment to be used to provide special assemblies of equipment.
- (3) Special assemblies of equipment signified, Frozen Date, apply only to those special assemblies in service as of the date shown, and furnished the same customer on the same premises.

A. BELL AND LIGHTS SYSTEM ATTACK WARNING SERVICE¹ (Cont'd)

3. Regulations (Cont'd)

c. Application of Charges.

A separate intrawire center channel charge is applicable for each control station, each alternate control station and each receiving station.

An interwire center channel may be required for connecting a control station, alternate control station or receiving station with the network.

The wire center mileage between two wire centers at which connection is made with (1) the intrawire center channel connected to the control, alternate control station or receiving station and (2) the network, is the airline distance between the wire centers as determined in accordance with The National Exchange Carrier Association (NECA) Tariff F.C.C. No. 4, Sections 11 and 16 except as provided in the following paragraphs:

- d. On or after September 16, 1996, Bell and Lights System Attack warning service will be grandfathered and provided only to those customers of record as of September 16, 1996. No replacement service is being offered. This service will be withdrawn January 14, 1997.

4. Rates and Charges

(1) In the development or trial of customer-provided equipment designed for miscellaneous transmission purposes or,

(2) In the trial and evaluation of experimental equipment provided by the Utility.

- b. These service(s) are furnished to connect two or more service points to the Utility's local loop demarcation point. (T) (N)

2. Regulations

- a. This schedule contains the rates and regulations applicable to special assembly private line service(s) for miscellaneous experimental purposes, furnished or made available by the Utility, over facilities wholly within or partly within and partly without the State of California, between stations, all of said stations being within the territory served in California.

b. Station Equipment

Station equipment and station wiring, other than the equipment and wiring necessary for the termination of the channel on the customer's premises shall be provided by the customer.

2. Regulations (Cont'd)

d. In addition to the general regulations and definitions applicable to Private Line Service(s) set forth in Schedule Cal.P.U.C. No. B2., the above Type and Description D.1. apply to special assembly private line service(s) for miscellaneous experimental purposes. (T)

e. Basic termination charges shown in the Rates Section reduce 1/60 for each month of service unless noted otherwise. (T)

3. Rates and Charges

a. Reserved.

b. One duplex channel with a bandwidth of approximately 240 kiloHertz for data transmission at a rate of 230,400 bits per second, connecting customer's two locations within the Sunnyvale, California exchange, is furnished for use in connection with customer-provided data equipment.

	<u>Installation</u> <u>Charge</u>	<u>Monthly</u> <u>Rate</u>	<u>USOC</u>
- One-Channel	\$5600.00	\$370.00	ZZYGQ

3. Rates and Charges (Cont'd)

c. One one-way channel with a bandwidth of approximately 3MC specially conditioned for high definition, high speed transmission of facsimile signals from customer-provided facsimile equipment at Palo Alto, California, to customer-provided facsimile equipment at Riverside, California. This channel facility is furnished for eight consecutive hours per day, the same hours each day, seven days per week.

	<u>Monthly Rate</u>	<u>USOC</u>	(T)
- One Channel	\$14670.00	ZZYGH	

d. Three duplex channels, each with a bandwidth of approximately 100 kHz, connecting customer's locations are furnished the United States Air Force in connection with customer-provided terminal equipment¹.

	<u>Basic Termination Charge</u>	<u>Monthly Rate</u>	<u>USOC</u>
- Between the Sacramento and Lincoln exchanges, and between the Sacramento and Dixon exchanges.	\$83700.00	\$5050.00	ZZYG1

e. Two groups of 18 one-way channels, each with a bandwidth of approximately 0 to 100 kHz for data transmission in connection with customer-owned high speed data equipment. The two groups will provide for transmission in opposite directions between the customer's two locations within the East Bay, California exchange.

	<u>Basic Termination Charge</u>	<u>Monthly Rate</u>	<u>USOC</u>
- Two channel groups	\$6200.00	\$230.00	ZZYGO

NOTE 1: The customer may create additional channels by the use of C-P equipment.

3. Rates and Charges (Cont'd)

eo. SSE #92N-07-03 (T)

Provides 12 strands of 62.5 micron multi-mode dim fiber, with optical handoff, between customer locations at 1212 Terra Bella and 960 Linda Vista, Mountain View, operating at a maximum speed of 135 Mbps. (N)

	Basic Termination Charge ²	Installation Charge	Monthly Rate	USOC	
- Per System	\$20300.00	NO	\$1000.00	WZZVJ	(N)

ep. SSE #85-08-43

A fiber optic transmission system consisting of four circuits, operating at a rate of 90.0 Mbps between 1425 S. Main and 25 N. Via Monte, both in Walnut Creek.

This offering will terminate October 12, 1996.

	<u>Charge</u>	<u>Monthly Maintenance Rate</u>	<u>USOC</u>
- Per System	\$199000.00	\$50.00	WZZDA

NOTE 1: Basic Termination Charge reduces 1/60th for each month in service.

eq. SSE #86-03-26

Five derived 1.544 Mbps channels remaining from existing 45 Mbps fiber optic facilities between Building 602, 1901 Malvern and Building 635, 4201 Bonita Place, both in the Fullerton exchange.

This offering will terminate August 23, 1996.

	<u>Installation Charge</u>	<u>Monthly Rate</u>	<u>USOC</u>
- Per system	\$10000.00	\$500.00	WZZDD

er. SSE #86-05-27

One pair of fiber optic cable (two fibers), and associated fiber optic data sets to support IBM 3251 type terminals in Building 90 at 2.35 Mbps from Building 67, 2555 N. Hollywood Way to Building 90, 3110 Thornton, both in the Burbank exchange.

This offering will terminate August 25, 1989.

	<u>Installation Charge</u>	<u>Monthly Rate</u>	<u>USOC</u>
- Per system	\$8400.00	\$800.00	WZZDX

3.3 OTHER FEATURES AND ARRANGEMENTS

3.3.1 CLASSIFICATION AND RATES - CHANNEL CONDITIONING

A. TYPES AND DESCRIPTION

The following specific conditions are applicable to general purpose channel conditioning arrangements for private line services.

(T)

1. Type C1

- a. Envelope delay between 1000 and 2400 Hertz shall not exceed a maximum difference of 1000 microseconds.
- b. The loss deviation with frequency (from a 1000 Hertz reference) shall not exceed -1 to +3 db from 1000 to 2400 Hertz and -2 to +6 db from 300 to 2700 Hertz¹.

2. Type C2

- a. Envelope delay shall not exceed the maximum difference as follows:

Between 1000 and 2600 Hertz a maximum difference of 500 microseconds.
Between 600 and 2600 Hertz a maximum difference of 1500 microseconds.
Between 500 and 2800 Hertz a maximum difference of 3000 microseconds.

- b. The loss deviation with frequency (from a 1000 Hertz reference) shall not exceed -1 to +3 db from 500 to 2800 Hertz and -2 to +6 db from 300 to 3000 Hertz¹.

3. Type C4

- a. Envelope delay shall not exceed the maximum difference as follows:

Between 1000 and 2600 Hertz a maximum difference of 300 microseconds.
Between 800 and 2800 Hertz a maximum difference of 500 microseconds.
Between 600 and 3000 Hertz a maximum difference of 1500 microseconds.
Between 500 and 3000 Hertz a maximum difference of 3000 microseconds.

- b. The loss deviation with frequency (from a 1000 Hertz reference) shall not exceed -1 to +3 db from 500 to 3000 Hertz and -2 to +6 db from 300 to 3200 Hertz¹.

NOTE 1: + means more loss.
