

1. HIGH CAPACITY SERVICE

A. GENERAL

Additional terms and conditions applicable to Special Access Services may be found in Part 2, Section 2.

All rates and charges may be adjusted at a later date.

The Channel Mileage rate is applicable when a High Capacity Service connects a customer designated premises to a Fast Packet Service and the customer serving wire center is not capable of providing the Fast Packet Service. The mileage will be measured from the customer serving wire center to the nearest wire center equipped with Fast Packet Services capabilities; this wire center may be in AT&T service territory.

The Channel Mileage rate is not applicable when a Primary Rate ISDN or SuperTrunk service connects a customer designated premises via a Company collocation arrangement to the Company's serving wire center.

1. HIGH CAPACITY SERVICE

A. GENERAL

Additional terms and conditions applicable to Special Access Services may be found in Part 2, Section 2.

All rates and charges may be adjusted at a later date.

The Channel Mileage rate is applicable when a High Capacity Service connects a customer designated premises to a Fast Packet Service and the customer serving wire center is not capable of providing the Fast Packet Service. The mileage will be measured from the customer serving wire center to the nearest wire center equipped with Fast Packet Services capabilities; this wire center may be in AT&T service territory.

The Channel Mileage rate is not applicable when a Primary Rate ISDN or SuperTrunk[®] service connects a customer designated premises via a Company collocation arrangement to the Company's serving wire center.

(C)

1. HIGH CAPACITY SERVICE (cont'd)**B. BASIC CHANNEL DESCRIPTION**

A High Capacity channel is a channel for the transmission of nominal 64.0 kbps^{/1/} or 1.544, 3.152, 6.312, 44.736 (DS3, DS3x3 and DS3x12), or 274.176 Mbps isochronous serial data. The actual bit rate and framing format is a function of the network channel interface selected by the customer. DS3, DS3x3 and DS3x12 will be provided with or without Company provided terminal equipment on the customer's premises. When a customer desires to furnish their own terminal equipment, the Company will work cooperatively with the customer to provide a physical interface satisfactory to both parties. High Capacity channels are provided between customer designated premises through serving wire centers or between a customer designated premises and a Company Hub or between a customer designated premises or Company Hub, and an EIS POT. DS3x12 is only provided between a customer designated premises and the serving wire center serving that premises.

High Capacity service offerings are only available where facilities and operating conditions permit. Where facilities and/or operating conditions do not permit, Special Construction as set forth in Schedule Cal. P.U.C. No. 175-T, Section 15, shall apply.

/1/ Available only as a channel of a 1.544 Mbps facility between two Company Digital Data Hub or as a cross connect of two channels of two 1.544 Mbps facilities at a Digital Data Hub(s); or as a through-connect of two channels of two 1.544 Mbps facilities at an Advanced Digital Network Hub. The customer must provide system and channel assignment data.

1. HIGH CAPACITY SERVICE (cont'd)

E. OPTIONAL FEATURES AND FUNCTIONS (cont'd)

4. Central Office Multiplexing

- DS4 to DS1

An arrangement that converts a 274.176 Mbps channel to 168 DS1 channels using digital time division multiplexing.

- DS3 to DS1

There are two options available with this feature.

Option 1

An arrangement that converts a 44.736 Mbps channel to 28 DS1 channels using digital time division multiplexing.

Option 2

An arrangement that converts a 44.736 Mbps channel to up to 28 channels for use with DS1 service when Network Reconfiguration Service is requested as set forth in 2. (Advanced Digital Network), following.

- DS2 to DS1

An arrangement that converts a 6.312 Mbps channel to four DS1 channels using digital time division multiplexing.

- DS1C to DS

An arrangement that converts a 3.152 Mbps channel to two DS1 channels using digital time division multiplexing.

- DS1 to Voice

An arrangement that converts a 1.544 Mbps channel to 24 channels for use with Voice Grade Services. A channel of this DS1 to the Hub can also be used for a Digital Data, Program Audio or Metallic Service.

2. ADVANCED DIGITAL NETWORK

GENERAL

Additional terms and conditions applicable to Special Access Services may be found in Part 2, Section 2.

All rates and charges may be adjusted at a later date.

Advanced Digital Network may be terminated on a channel port of Access Advantage Plus as found in AT&T California Guidebook Part 6, Section 7.

2. ADVANCED DIGITAL NETWORK

GENERAL

Service Availability

Effective December 1, 2021, Advanced Digital Network (at fixed rates of 2.4, 4.8, 9.6, 19.2, 56.0, and 64.0 kbps) will no longer be available for purchase by new or existing customers. In addition, requests to move, add, change, or renew existing service arrangements will not be accepted.

(N)
|
(N)

Additional terms and conditions applicable to Special Access Services may be found in Part 2, Section 2.

All rates and charges may be adjusted at a later date.

Advanced Digital Network may be terminated on a channel port of Access Advantage Plus as found in AT&T California Guidebook Part 6, Section 7.

2. ADVANCED DIGITAL NETWORK (cont'd)**D. OPTIONAL FEATURES AND FUNCTIONS (cont'd)**

3. Network Control and Diagnostics

Network Control and Diagnostics will provide the ability for the customer to accomplish such tasks as monitoring and isolation testing.

Network Control and Diagnostics is only available with variable speed selection. All terminations in a circuit must be similarly equipped.

4. Network Reconfiguration Service^{/1/}

Network Reconfiguration Service will allow the customer or AT&T technician to make changes in the individual circuit segments of their network. These changes can be mapped and stored, and executed automatically based on time of day, or the customer can make on demand changes based on disaster recovery or traffic smoothing requirements.

There are two alternatives that will allow a customer to access the circuits in their Network Reconfiguration Service database; (1) Client RAS or (2) Client VPN.

- a. Client RAS (Remote Administrator Software) is a dial-up configuration. Using a toll free 8XX number and a SecureID card, the NRS customer is allowed partitioned access to their NR database for the purpose of making changes within their ADN network.
- b. Client VPN (Virtual Private Networking) access can be granted to a customer who has dedicated Internet access. Utilizing specific software provided by the Company in addition to the SecureID card, the customer can access their NRS database for the purpose of making changes within their ADN network.

One rate element shall apply per DS0, DS1 or DS3 channel termination in the Digital Cross Connect machine.

/1/ Applicable to 1.544 Mbps service set forth in 1. High Capacity Service, preceding.

2. ADVANCED DIGITAL NETWORK (cont'd)**D. OPTIONAL FEATURES AND FUNCTIONS (cont'd)**4. Network Reconfiguration Service^{/1/} (cont'd)

In addition, the customer must separately order the transport service DS0, DS1, DS3 required to connect the customer designated premises to the Port location at a Company Serving Wire Center.

The customers may order terminations that terminate at the Digital Cross-Connect Switch as part of their overall end to end service.

All terminations on a circuit configuration for the customer's network to be capable of reconfiguration must be similarly equipped.

In each of the above alternatives the customer will supply the compatible Network Channel Terminating Equipment designated in Technical Reference PUB L-780036 at their premises. The Company will provide the Network Channel Terminating Equipment at the Company site.

The customer is responsible for assigning and maintaining a record of all reconfigurations and access. The customer also agrees to provide the Company with a central point of contact for inquiries, trouble reports and security management involving reconfiguration.

In addition to, and not limiting the other provisions contained in the Company's tariffs or Guidebooks, the Company will not be responsible for any damage, loss or harm to Advanced Digital Network customers, and/or other Company customers which results from customer and/or third party misuse, unauthorized use, abuse or error using Advanced Digital Network features and/or failure of the customer to adhere to the security policies, methods and tools associated with this product. Such policies, methods and tools will be provided by the Company to the customer.

/1/ Applicable to 1.544 Mbps service set forth in 1. High Capacity Service, preceding.

2. ADVANCED DIGITAL NETWORK (cont'd)

D. OPTIONAL FEATURES AND FUNCTIONS (cont'd)

5. Advanced Digital Network Channel Interface

An Interface which provides an ADN channel to connect to a 1.544 Mbps multiplexer to be transported on a separate 1.544 Mbps service. One channel Interface shall apply per channel.

6. Central Office Multiplexing

An arrangement that converts a 56.0 kbps channel to subspeeds of up to twenty 2.4 kbps, ten 4.8 kbps, or five 9.6 kbps channels using digital time division multiplexing.^{/1/}

7. Through-connect^{/1/}

An arrangement that provides a customer the ability to connect two channels of two different 1.544 Mbps facilities terminating in the same digital cross-connect switch (DCS) in an ADN Hub. The two 1.544 Mbps facilities must be billed to the same customer. The customer must provide system and channel assignment data.

/1/ Available only on a channel of a 1.544 Mbps facility to a Company ADN Hub. The Network Reconfiguration Service feature is not offered on this arrangement.

2. ADVANCED DIGITAL NETWORK (Cont'd)

3. OPTICAL CARRIER NETWORK (OCN) POINT TO POINT SERVICE (cont'd)**A. SERVICE DESCRIPTION**

Optical Point-to-Point service will be designed to provide the customer with a custom point-to-point linear network. Optical Carrier Network (OCN) Point-to-Point service offers a highly reliable transport service that connects customer premises and Company Serving Wire Center in point-to-point linear configuration. OCN supports voice, data, video, imaging, Internet traffic and other advanced broadband applications.

OCN Point-to-Point channels provide high speed synchronous optical fiber-based full duplex data transmission capabilities between two points. These services provide optical data transmission with the following characteristics:

- OC-3/OC-3c provides channels operating at the terminating bit rate of 155.52 Mbps;
- OC-12/OC-12c provides channels operating at the terminating bit rate of 622.08 Mbps;

OC-3, and OC-12 channels may be used to connect:

- a customer designated premises to another customer designated premises, without add/drop multiplexing capability.
- a customer designated premises to a Company Serving Wire Center where add/drop multiplexing and add/drop functions are performed.

Optical Transmission paths for OC-3/OC-3c and OC-12/OC-12c, differentiated by bit rate and the quality of transmission is as delineated by the Optical Interface definitions in the appropriate technical reference publication(s) for the service ordered.

OC-3, and OC-12 may be connected by (1) using the appropriate OC-3 or OC-12 add/drop multiplexer (mux) along with the add/drop function to a DS1 and/or DS3 at suitably equipped wire centers, or (2) by using the full bandwidth premises to premises.

Optical Carrier Network (OCN) Point-to-Point service is only available where facilities and/or operating conditions permit. Where facilities and/or operating conditions do not permit, Special Construction as set forth in Part 2, Section 5, shall apply.

4. OC-3, OC-12, OC-48 DEDICATED SONET RING SERVICE

A. GENERAL

Additional terms and conditions applicable to Special Access Services may be found in Part 2, Section 2.

All rates and charges may be adjusted at a later date.

OC-3, OC-12, OC-48 dedicated SONET Ring Service is available at the listed rates in this Guidebook where facilities and operating conditions permit. Where facilities can only be provided as a Special Construction offering, Special Construction charges as set forth in Part 2, Section 5, on an Individual Case Basis (ICB), will apply.

4. OC-3, OC-12, OC-48 DEDICATED SONET RING SERVICE

Service Availability

Effective December 1, 2021, neither new nor existing customers will be permitted to purchase new OC-3, OC-12, OC-48 Dedicated SONET Ring Service ("Service"). In addition, (A) Service Term Pricing Plans greater than 12-months in length will no longer be available; and (B) requests to move, add, change, upgrade, or downgrade existing Service arrangements will not be accepted, with the following exceptions: (1) existing customers will be permitted to modify their existing Service and will be able to add new circuits to their existing Service, but will not be permitted to add new nodes in any locations; (2) any such new circuits will be subject to the customer's existing term payment plan or term agreement for the Service to which they are added. Following the expiration of a customer's existing term agreement, Service will be provided on a month-to-month basis at the applicable Monthly Extension rates until the Service is discontinued.

Effective November 30, 2023, unless specified to the contrary in their existing Service agreements, existing customers may not renew Term Pricing Plans or term agreements for Service. In addition, no move, add, or change orders of any type will be accepted.

(N)

(N)

A. GENERAL

Additional terms and conditions applicable to Special Access Services may be found in Part 2, Section 2.

All rates and charges may be adjusted at a later date.

OC-3, OC-12, OC-48 dedicated SONET Ring Service is available at the listed rates in this Guidebook where facilities and operating conditions permit. Where facilities can only be provided as a Special Construction offering, Special Construction charges as set forth in Part 2, Section 5, on an Individual Case Basis (ICB), will apply.

4. OC-3, OC-12 AND OC-48 DEDICATED SONET RING SERVICE (cont'd)**B. BASIC SERVICE DESCRIPTION (cont'd)**

1. Nodes

Customers Premises Nodes and Central Office Nodes

Nodes aggregate lower bandwidth capacities onto the ring through use of the SONET add/drop multiplexer function. The CO Node is located in the Company SWC; the Premises Node, at the customer's location. For ring nodes bandwidth capacities are 155 Mbps (OC-3), 622 Mbps (OC-12), and 2.4 Gbps (OC-48). A Ring must have a minimum of two nodes, excluding sub-rings and ARC sub-rings. One node must be located in the Company SWC. A maximum of 16 nodes including regenerators will be allowed per ring.

When a customer premises node is located in the same building as a CO Node, diversity between the two nodes may not be available.

Additional Node

If a customer requests and has installed two customer premises nodes of the same speed, on the same dedicated ring, at the same customer premises location, the additional node will be billed rates and charges as set forth in **E.**, following. The lower rate does not qualify when the additional node is located in another room or building from the first node. This option does not guarantee diversity between these two nodes and the rest of the ring.

Re-Map Node

A Re-Map node is a customer premises ring node that is pre-equipped and dedicated to the SONET Ring customer's traffic which is re-mapped/re-routed to the Re-Map Node by the Company upon notification by the customer of a service outage at another customer premises node on the same dedicated ring. Re-Map is designed as a temporary service for disaster recovery purposes only. No "normal" customer traffic will be added/dropped at the Re-Map node unless the Re-Map service is activated.

An OC-12 or OC-48 Ring utilizing Re-Map requires an OC-3 or OC-3c Re-Map port and DS1 Re-Map Add/Drop Capability to support DS1 port types (an OC-3 or OC-3c Re-Map port and DS1 Re-Map Add/Drop Capability supports up to 84 DS1's).

The emergency Re-Map activation configuration will be maintained for up to 30 days after which, if the customer requests to continue the use of the Re-Mapped configuration, the emergency activation Nonrecurring charge as set forth in **E.**, following will be applied once for each 30-day additional period.

4. OC-3, OC-12 AND OC-48 DEDICATED SONET RING SERVICE (cont'd)**B. BASIC SERVICE DESCRIPTION (cont'd)**

1. Nodes (cont'd)

Re-Map Node (cont'd)

Upon notification from the customer that they are ready to receive signals at the Re-Map node site the Company will Re-Map up to 50 lower bit rate transmission services within the initial four hours and 20 lower bit rate transmission services every hour thereafter. The emergency activation nonrecurring charges as set forth in E.7., following, will not be applied if the first 50 lower bit rate transmission services are not re-mapped within four hours due to a Company caused delay.

Re-Map testing or activation for OC-3 requires a minimum of one DS1 (VT1.5) or one DS3 (STS-1) between one customer premises node and the Re-Map node.

Re-Map testing or activation for OC-12 or OC-48 service requires a minimum incremental group from one to 28 or one DS3 (equals one STS-1) between one customer premises node and the Re-Map node.

OC-48 Dedicated SONET Ring is available via Self-Healing Uni-Directional Path Switched Ring or Self-Healing Bi-Directional Line Switched Ring. Re-Map is currently not offered on a Bi-Directional Line Switched Ring.

Re-Map testing or activation of OC-12 or OC-48 Dedicated SONET Ring service requires a minimum incremental group from one to 28 DS1s or one DS3 (equals STS-1) between one customer's premises node and the Re-Map node.

Flex Ring Node

Flex-Ring feature provides a second independent ring equal to the line rate (bandwidth) of the first ring, located on the same shelf on the same node(s) as the first ring.

Flex Ring Node allows a single customer the ability to add an additional ring of the same line rate. A Flex Ring Node is applicable to only one end user customer and the Flex Ring customer must be the same customer of record for the Dedicated SONET Ring. Flex Ring Node is offered on an OC-12 and OC-48 Dedicated SONET Ring and is limited to two rings (a primary and a secondary ring) per Flex Ring arranged. This feature will provide two rings from the same shelf.

A customer with the Flex Ring option must maintain equal parity on both rings (Primary and Flex). If the customer chooses to add or remove nodes from either Ring in the Flex ring option, but not on both rings, the customer forfeits the Flex Ring option and must purchase two separate Dedicated SONET Rings, and the Flex Ring option will be removed.
