ACCESS SERVICE

6. Switched Access Service (Cont'd)6.1 General (Cont'd)6.1.3 Rate Categories (Cont'd)(B) Local Switching

This rate category provides for (1) local end office switching, i.e., the common switching functions associated with the various Switched Access Service arrangements, (2) the termination of Switched Transport at end offices, (3) the termination of common lines and WATS Access Lines at end offices and (4) intercept functions, i.e., the termination of certain calls at a Telephone Company intercept recording, (5) the Dedicated End Office Port which provides for each dedicated line or trunk terminating in the end office port, and (6) the Shared End Office Trunk Port which provides for the use of the shared end office trunk ports for termination of common transport trunks for tandem routed traffic. (D)

This Category includes usage sensitive rates and both chargeable and nonchargeable optional features.

(a) Usage Sensitive Rates

The usage sensitive rates are applied on a per minute of use basis and are divided into the following categories:

- (i) LS1 provides local switching functions for FGA and FGB, except for FGA and FGB used to terminate traffic to a WATS Access Line (WAL).
- (ii) LS1A provides local switching functions for the ALA and ATA-950 except when the ALA or ATA-950 is used to terminate traffic to a WATS Access Line (WAL).
- (iii) LS2 provides local switching functions for FGA and FGB used to terminate traffic to a WAL, FGD and 8yy or 900 Access Service. Where end offices are appropriately equipped, international dialing may also be provided as a capability of LS2, i.e., the capability of switching international calls with service prefix and address codes having more digits than can be switched through a standard FGD end office.

ACCESS SERVICE

6. Switched Access Service (Cont'd)6.2 Provision and Description of Switched Access Service (Cont'd)6.2.14 500 Access Service

500 Access Service is an originating service utilizing trunk side Switched Access Service and is available at appropriately equipped Telephone Company end offices or tandem switches. The service provides a 500 Access Service customer identification function based on the dialed 500 number.

When a 0+500+NXX-XXXX or 1+500+NXX-XXXX call is originated by an end user, the Telephone Company will perform the 500 Access Service customer identification function based on the dialed digits to determine the customer location to which the call is to be routed. If the call originates from an end office switch not equipped to provide the 500 Access Service customer identification function, the call will be routed to an office at which the function is available. Once 500 Access Service customer identification has been established, the call will be routed to the customer. Calls originating in an end office switch in which the customer has not ordered 500 Access Service will be routed to intercept. The 500 Access Service customer has the option to order 0+ 500, 1+ 500 or both. 0+ 500 and 1+ 500 originating calls from 101XXXX, inmate service, toll restricted lines, WATS, FGA and ALA with Call Access Denial will be blocked. 1+ 500 originating calls from Coin Hard Screen, Prepay, Hotel/Motel ANI 7, Hospital, PACBELL Charge-A-Call and AT&T Public Access Line will be blocked. If the 500 Access Service customer chooses not to accept a call that the Telephone Company routes, then the 500 Access Service customer is responsible for providing its own blocking and announcement explaining the reason the call cannot be completed. If the 500 Access Service customer accepts 500 calls and subsequently cannot collect from the calling or called party, the Telephone Company is not responsible for the uncollected charges. International dialing (e.g., 01 and 011+500+NXX-XXX) will not be accepted for reaching a 500 access service customer.
