ACCESS SERVICE

Appendix A

This document provides supplemental information related to Managed Shared Frame Relay Service (located in Section 21.4 of BellSouth F.C.C. Tariff NO. 1) and Managed Shared Asynchronous Transfer Mode (ATM) Service (located in Section 21.5 of BellSouth F.C.C. Tariff NO. 1). The generic name "Managed Shared Packet Service" used herein shall refer to both Managed Shared Frame Relay Service and Managed Shared ATM Service. The supplemental data contained herein is necessary for a customer to determine the appropriate Managed Shared Packet Service tariff rate elements to meet individual service requirements. Terms utilized herein relating to Managed Shared Packet Services have been defined and explained in the specific service tariffs in Section 21.

The data provided in table format in Appendix A represents the following:

<u>Column Title</u>	<u>Information Description</u>
State	State name(table listings are arranged alphabetically by state)
SWC CLLI	BellSouth Serving Wire Center (SWC) Common Language Location Identification (CLLI) code (SWC CLLI codes are listed alphabetically by state)
SAP CLLI	CLLI of the Managed Shared Packet Service "Service Area Point" (SAP) for the listed serving wire center
Service Area	Name of the assigned Managed Shared Packet Service "Service Area" for the listed serving wire center
LATA #	The LATA number of the listed serving wire center

ISSUED: JUNE 16, 2011

EFFECTIVE: JULY 1, 2011

How to Use Appendix A Data

Information contained herein Appendix A shall be utilized to address customer specific questions relating to Managed Shared Packet Services as follows:

1. What data is necessary to determine if a customer premises requires a simple "Connection" or an "Extended Connection" for Managed Shared Packet Service?
 - Locate the CLLI of the customer premises' serving wire center.
 - If the associated SAP CLLI is the same as the SWC CLLI, then the customer premises requires a simple Managed Shared Packet Service Connection.
 - If the associated SAP CLLI is different from the SWC CLLI, then the customer premises requires a Managed Shared Packet Service Extended Connection. (see 2. following)
2. If a customer premises requires an "Extended Connection", what data is needed to determine the appropriate mileage band of "Extended Connection"?
 - Locate the CLLI of the customer premises' serving wire center.
 - Utilizing the associated SAP CLLI and SWC CLLI, reference NATIONAL EXCHANGE CARRIER ASSOCIATION, INC. TARIFF F.C.C. NO. 4 to determine the V&H coordinates of those wire centers; using the V&H coordinates method of determining mileage also contained therein the NECA Tariff, calculate the mileage between these two wire centers. Use this mileage to reference the appropriate Managed Shared Packet Service tariff in Section 21 of BellSouth F.C.C. NO. 1 to determine the correct Extended Connection rate element which would include this mileage quantity.
3. What data is required to determine if a PVC that a customer wants to establish between two Managed Shared Packet Service Connections will additionally require an Inter Service Area Link (ISAL) rate element?
 - Locate the CLLI of each customer premises' serving wire center in the table data.
 - If the two entries have the same LATA Number and the same Service Area, a PVC is possible and no ISAL rate element is required.
 - If the two entries have the same LATA Number and different Serving Areas, ISAL rate elements are appropriate in addition to the standard PVC rate elements (e.g., DLCI, CIR, PVC Segment, PVC Bandwidth, etc.).
