6 - BellSouth SWA Service (Cont'd)

6.1 General (Cont'd)

6.1.1 BellSouth SWA Service Arrangements and Manner of Provision (Cont'd)

(J) BellSouth Local Number Portability Database Services

BellSouth Local Number Portability (LNP) Database services, which are available to wireline and wireless telecommunications carriers, provide routing information necessary to direct calls placed to a ported number to the correct switch for completion to the end user. Carriers may obtain the routing information directly by subscription to BellSouth LNP Query service. To obtain BellSouth LNP Query Service, the customer must order new or use existing CCS7 Signaling Connections and Terminations as described in 6.1.3(C) following. On a default basis, N-1 Carriers may deliver traffic to BellSouth's network without having made a LNP query. In such cases BellSouth's LNP Call Routing service will secure the necessary routing information in order for the call to be delivered properly. A more detailed description of BellSouth LNP Database services is provided in Section 6.2.11.

(K) Reserved for Future Use

(T)

(L) Manner of Provision

BellSouth SWA service arrangements are furnished in either quantities of lines or trunks. Trunks are differentiated by type and directionality of traffic carried over a BellSouth SWA service arrangement.

There are five major traffic types: Originating, Terminating, Directory Assistance, Operator Services, and CCS7 Access. The originating traffic type represents access within a LATA for carrying traffic from the end user to the customer. The terminating traffic type represents access within a LATA for carrying traffic from the customer to the end user.
