

GOVERNMENT AGENCIES SERVICES

General

The communications services listed herein are designed specifically for use by government agencies. All rates and charges shown are in addition to those specified elsewhere for standard items of equipment or service. These services may be provided at other than government locations to meet requirements for which they are suited unless otherwise stated.

Alternate Routing Switching Arrangement

Provides customer control of routes for a maximum of 200 local channels and/or channel terminals associated with interexchange private line services /ARZ/ (Requires 2 Type 1011 or 1012 Private Line channels as provided in Part 15, between customer location and principal central office.)

Dial Announcement Recording Trunk

This equipment transfers a completed private line network call to the switchboard until the attendant obtains the details of the call from the calling party. Announcement equipment advises the called party to hold the line.

Weather Radar System

Private line terminating equipment with select and conference control from the primary location and access to the primary location only from all other terminations.

Direct Inward Dialing (DID)

To be furnished only to Grissom Air Force Base at Bunker Hill, Indiana.

Reduces 1/120 for each month of service

* Reduces 1/60 for each month of service

TELECOMMUNICATIONS SERVICE PRIORITY (TSP) SYSTEM**General**

The TSP System is a service, developed to meet the requirements of the Federal Government, which provides the regulatory, administrative and operational framework for the priority installation and/or restoration of National Security Emergency Preparedness (NSEP) telecommunications services in accordance with Part 64.401, Appendix A, of the Federal Communication's (FCC) Rules and Regulations. The TSP System applies only to NSEP telecommunications services, and requires and authorizes priority action by the Company providing such services.

In addition, TSP System service shall be provided in accordance with the guidelines set forth in "Telecommunications Service Priority (TSP) System for the National Security Emergency Preparedness (NSEP) Service Vendor Handbook", Office of Emergency Communications (OEC) Handbook 3-1-2 (C) dated December 1, 1989. The TSP System Service customer must also be the same customer for Telecommunications Service with which it is associated.

The customer, in obtaining a Restoration Priority, recognizes that if the Company were required to quote charges or obtain permission to proceed prior to the restoration of NSEP services, unnecessary delays would result, contrary to the aforementioned Rules and Provisions. In subscribing to TSP System and in recognition of this condition, the customer grants the Company the right to quote charges subsequent to the restoration.

In addition to the provisions contained herein, provisions contained elsewhere in this Guidebook also apply.

Certain activities associated with the TSP System performed by the Company in compliance with Part 64.401, Appendix A of the FCC's Rules and Regulations are included in the elements as follows:

- Priority Installation Invocation includes System Development, Verification, Confirmation, and Preemption.
- Priority Restoration Level Implementation includes System Development, Verification, and Confirmation.
- Priority Restoration Level Change includes Verification and Confirmation.
- Priority Restoration Maintenance and Administration includes Reconciliation and Preemption.
