2. REGULATIONS

Provision of Service

- A. At the CMC's request, the Telephone Company and the CMC will physically connect their facilities and interchange traffic originating or terminating on the CMC's System in connection with the CMC's authorized services. Such interconnection shall be in accordance with the provisions set forth herein.
- B. Subject to the availability of facilities and the reasonable requirements of the Telephone Company for its telecommunications services, the Telephone Company will provide to the CMC, upon request, those facilities and arrangements which are necessary to establish the physical connection and interchange of traffic provided for herein, and other facilities the CMC may require for operation of its system such as remote transmitter and receiver links.
- C. In interchanging two-way cellular traffic, the Telephone Company will connect its facilities with those of the CMC between an end office switch or tandem located in the CMC's Cellular Geographic Service Area and the CMC's Mobile Telephone Switching Office serving that area.
- D. If facilities are not available or, where the CMC's individual requirements are such that special equipment or arrangements, special routing, special gauge of wire, unusual type of circuit facilities or more circuit facilities than could be utilized in the near future for telephone service are required, special construction as found in Part 2, Section 5 of this tariff may be applicable.
- E. When digital Type 2A or 2B service is requested, a digital trunk facility must be established between the tandem or end office and the MTSO prior to the provisioning of individual digital trunk channels. The CMC shall provide the system identification and channel assignment of the digital trunk facility when ordering digital trunk channels on existing digital trunk facilities.
- F. Digital Trunk Facility Non-synchronization Option

When requested by the CMC for a shared use digital trunk facility, digital Type 2A facilities provided to a digital tandem may be equipped in the Telephone Company central office to allow the CMC to utilize Type 2A service while operating independently of the national synchronization network. (C)
