A142. OBSOLETE SERVICE OFFERINGS - INTEGRATED SERVICES DIGITAL **NETWORK (ISDN)**

A142.2 ISDN - Residence Service (IRS)

Effective December 15, 2015, ISDN - Residence Service (IRS) is obsoleted. IRS will not be available for new service, additions or (N)changes to existing service, or moves of existing service to a new location. Customers may retain the service for existing IRS lines at existing locations. (O)

A142.2.1 General

- A. Effective October 30, 1996 ISDN Residence Service (IRS) will be offered only under a Flat Rate Threshold Pricing Plan. (T)(O) This plan allows up to 200 hours of use each month per DSL at the flat rate. Minutes of use rates will apply for all usage above the 200 hours per DSL threshold. A minimum service period of three months will be required on the Flat Rate Threshold Pricing Plan. Termination Charges as defined in this Guidebook will apply if the subscriber terminates or disconnects the service prior to fulfilling the three months period.
- **B**. ISDN - Residence Service (IRS) is a new intraLATA group of offerings supported by the Integrated Services Digital Network (T)(O) (ISDN) architecture. IRS supports simultaneous transmission of voice, data, and packet services on the same exchange access line. Calling/Called Number Delivery and Calling Name Delivery and Call Hold are included with this service where facilities permit. Numbers will not be delivered from lines equipped with Optional Calling Numbers Blocking in A13.19.
- C. IRS provides a new method of access to the telephone network called Basic Rate Access. Basic Rate Access will consist of (O)the ability to access up to two 64 Kbps (B) channels and one 16 Kbps (D) channel at the service delivery point.
- D. IRS is provided through Basic Rate Access. Features are available to increase the capability of the Bearer Alternative Service (O)and may be subscribed to on an as-needed basis.
- E. B channel circuit switched services offer up to 64 Kbps intra-office transmission of voice or data. This option permits the (\mathbf{O}) customer to utilize either circuit voice or data transmission paths on a per call selection basis. Transmission on the B channel will be circuit switched at 64 Kbps within the switch and/or equipped facilities between ISDN compatible central offices. ISDN interconnection to non-ISDN equipped central offices will be potentially subjected to analog transmission or sub-rated to 56 Kbps. This option includes one directory number (DN). F. IRS will consist of the following components: (\mathbf{O})
- Basic Rate Digital Subscriber Line (DSL) Access
 - Two B channels CSV/CSD and one D channel Low Speed Packet Switched Data. Optional B channel packet services may be purchased in place of the B channel CSV/CSD. A maximum of two simultaneous B channels can be in use per Basic Rate Access.
 - Minimum of one and maximum of eight User Profiles per Basic Rate Digital Subscriber Line (DSL) Access Arrangement. (\mathbf{O})
- G. IRS lines under the Flat Rate Threshold Pricing Plan will be an exception to Section A2, and can be mixed with either flat rate, (T)(O) message or measured lines at the same location. (T)(O)

A142.2.2 Regulations

- A. Customer Premises Equipment (CPE) that is compatible with the ISDN Interface is the responsibility of the user for provisioning.
- В. The Company will be responsible for publishing and maintaining ISDN Interface Specifications.
- C. The Company shall not be responsible if changes in any of the equipment, operations, or procedures of the Company utilized in the provision of Basic Rate Access render any facilities provided by the customer obsolete or require modification or alteration of such equipment or system, or otherwise affect its use or performance.
- D. Suspension of service is not allowed.
- E. Service Charges in Section A4 are applicable per Basic Rate DSL access in addition to rates and charges following.
- F. Installation charges in A42.1 will be waived for ISDN Residence Service customers transferring existing service to ISDN Business Service. Appropriate installation charges will be charged for any additions to the service completed at the time of transfer.
- G. Usage rates will apply for all minutes of use over the 200 hours allowed under the Flat Rate Threshold Pricing Plan. Usage (O) rates, as appropriate, are specified in this section.
- IRS will be available where central office and outside plant facilities permit. H.
- When a customer's normal serving central office is not equipped to provide IRS, that customer may be served from an L. (\mathbf{O}) equipped central office without incurring interoffice charges. IRS customers to be served under this arrangement must sign an agreement the service will be moved back to the normal serving central office and to a probable number change when/if that office is equipped with ISDN. If the customer's normal serving central office is equipped to provide IRS, and service is provided from another central office at the customer's request, interoffice charges as provided in this Section will apply. When requested by the customer, IRS served from a central office other than the central office the subscriber would normally (O) be served from will require interoffice facilities as provided in this Section, per DSL. Any non-ISDN interoffice facilities connecting to this service will follow the rules and regulations in Section A9.

A142. OBSOLETE SERVICE OFFERINGS - INTEGRATED SERVICES DIGITAL **NETWORK (ISDN)**

A142.	2.5 (Opti	onal Features (Cont'd)	(T)(O)
А.		_	Features (Cont'd)	(0)
	1.	(Co	ont'd)	(0)
		c.	Shared Secondary-Only DN - First Appearance - the first appearance of a secondary DN that appears on more than	(0)
			one terminal but is not the primary DN on any of those terminals.	
		d.	Key Short Hunt – This feature enhances call coverage by delivering key-set DN Short Hunt capability to standard-	(0)
			feature ISDN Voice terminals.	
		e.	Shared Non-ISDN DN - This feature allows call coverage for an analog set.	(0)
		f.	Privacy Release - This is a privacy feature that allows a customer to specify, on an EKTS group basis, that no other	(0)
			user can bridge on to calls. On a call by call basis, this feature can be disabled to allow bridging to occur.	
		g.	Manual Exclusion - This is the opposite of Privacy Release. On a call by call basis the user can restrict bridging.	(0)
		ĥ.	EKTS Intercom Calling - Dial - This feature allows an EKTS user to call other terminals in the EKTS group with	(0)
			one or two-digit dialing.	
		i.	EKTS Intercom Calling - Automatic - This feature allows an EKTS user to call another terminal in the EKTS group	(0)
			by activating a button on the EKTS set.	
		j.	EKTS Intercom Calling-Call Appearance - This feature allows EKTS Intercom Calling to be provisioned on a Call	(0)
			appearance.	
		k.	Conference, Drop, Hold, Transfer - EKTS	(0)
			- Conference - This feature allows the user to add a third party to an existing conversation. This feature is for use	(0)
			with voice calls only.	
			- Drop - This central office based feature allows the user to disconnect the last party added to a conference call.	(0)
			- Hold - Suspends an established call while another action is taking place.	(0)
			- Transfer - This feature allows the user to transfer a call to another DN. This feature is for use with voice calls only.	(0)
			This feature may require an additional call appearance or an additional DN. This feature is available for use with	(T)(O)
			EKTS sets with service provisioned in the EWSD switch. EWSD subscribers with Non-EKTS sets and 5ESS/DMS	
			subscribers should use the Conference, Drop, Hold and Transfer feature in the following section.	
	2.		e following features are available with either Custom ISDN or National ISDN. National ISDN customers may	(0)
			rchase these features for use with either EKTS sets or non-EKTS sets.	
		a.	Call Forwarding Variable - This feature allows the ISDN user to have the ability to forward all incoming calls to a	(0)
			user specified directory number.	
		b.	Call Forwarding Variable - Feature Button - This feature is the same as Call Forwarding Variable except that it is	(0)
			activated by a feature button.	
		c.	Call Forwarding - Busy Line - This feature automatically routes the calls to a preselected number when the called	(0)
			line is busy. This feature may be either fixed (changeable by service order) or programmable (customer changeable)	
			by station user via feature activation code.	
		d.	Call Forwarding - Don't Answer - This feature automatically routes calls to a preselected number when the called	(0)
			line does not answer in a preset ringing cycle. This feature may be either fixed (changeable by service order) or	
			programmable (customer changeable) by station user via feature activation code.	
			Call Pickup - Allows a user to answer calls directed to another line in the same preset Call Pickup Group.	(0)
		f.	Conference, Drop, Hold, Transfer -	(0)
			- Conference - allows the user to add a third party to an existing conversation. This feature is for use with voice	(0)
			calls only.	
			- Drop - This central office based feature allows the user to disconnect the last party added to a conference call.	(0)
			- Hold - allows the user to place a call on hold by pressing the function button. Any set with the call appearance for	(0)
			the call on hold can pick up the call by pressing the call appearance button.	
			- Transfer - This feature allows the user to transfer a call to another DN. This feature is for use with voice calls only.	(0)
		a	This feature may require an additional call appearance or an additional DN.	
		g.	Six-Way Conference, Drop, Hold, Transfer - This feature has the same functionality as Conference, Drop, Hold, Transfer feature except that six-way conference is allowed.	(0)
			Transier reacure except that six-way conference is anowed.

A142. OBSOLETE SERVICE OFFERINGS INTEGRATED SERVICES DIGITAL **NETWORK (ISDN)**

A142.2 ISDN - Residence Service (IRS) (Cont'd)

(T)(O) (T)(O)

A142.	2.5 Optional Features (Cont'd)
А.	Optional Features (Cont'd)

- (O) (\mathbf{O})
- (Cont'd) h. Speed Calling - This feature allows each user to assign up to thirty telephone numbers to a two-digit code for the (O)purpose of enabling abbreviated dialing.
 - i. Calling/Called Number Delivery/Calling Name Delivery-National ISDN - This feature provides the user who is (\mathbf{O}) receiving/originating a call with information about the calling/called party and the facility or destination and is provided with IRS. Some "privacy" options may be in effect in certain areas and will be located in Section A13.
 - Visual Message Waiting Indicator Provides the user of a message service with a visual indication that a message is j. (O)waiting.
 - Audible Message Waiting Indicator Provides the user of a message service with an audible indicator that a message k. (O) is waiting.
 - Additional Call Appearance PDN or DN This feature allows the terminal to have more than one DN button 1. (O)assigned to the same DN or Primary Directory Number (PDN).
 - m. Call Tracing This feature enables the customer to initiate an automatic trace of the last call received. Upon (\mathbf{O}) activation by the customer, the network automatically sends a message to the Company's Security Department indicating the calling number, the time the call was received, and the time the trace was activated. The customer using this feature would be required to contact the local business office for further action.
 - Call Return This feature enables a customer to place a call to the telephone number associated with the most recent n. (\mathbf{O}) call received, whether or not the call was answered or the number is known. The customer can dial a code or press a feature button to request that the network place the call. If the called line is not busy, the call is placed. If the called line is busy, a confirmation announcement is heard. (\mathbf{O}) Once the customer hangs up, the network will monitor the busy/idle status of both lines every forty-five seconds for up to thirty minutes. If during the queuing process both lines become idle, the customer is alerted that the network is ready to place the call. When the customer picks up the telephone, the call will automatically be placed. If unanswered by the customer the alerting will repeat every five minutes until answered, or for the remainder of the thirty minute monitoring interval. Multiple numbers may be placed in queue. The first idle number will be connected first. Both the customer and the called party may originate and receive calls without affecting the call return feature status.
 - Selective Call Forwarding Allows the customer to transfer selected calls to another telephone number. A screening 0. (\mathbf{O}) list of up to six numbers is created by the customer and placed in the network memory via an interactive dialing sequence. Subsequently, calls are forwarded to the Call Forwarding telephone number only if the calling number can be obtained and is found to match a number on the screening list.

If the customer also subscribes to Call Block and the same telephone number is entered on both screening lists, the (O) Call Block feature must be deactivated to allow the call to be forwarded.

- A142.2.5 Optional Features (Cont'd) A. Optional Features (Cont'd)
 - 2. (Cont'd)
 - 2. (Cont'd) o. (Cont'd)
 - (Cont'd)
 This feature will not work if the incoming call is from a telephone number in a hunt group unless the telephone
 (O)
 <li
 - p. Call Block This feature provides the customer the ability to prevent incoming calls from up to six different (0) telephone numbers.

A screening list is created by the customer either by adding the last number associated with the line (incoming or outgoing), or by preselecting the telephone numbers to be blocked. When a call is placed to the customer's number from a number on the screening list, the caller receives an announcement indicating that the party he is attempting to call does not wish to receive calls at this time.

If the customer also subscribes to Selective Call Forwarding and/or Personalized Ring 6 and the same telephone (0) numbers appear on those screening lists, Call Block will take precedence.

This feature will not work if the incoming call is from a telephone number in a hunt group unless the telephone (0) number is the main number of the hunt group, or is Telephone Number identified.

q. Personalized Ring 6 - This feature provides an alerting to the subscribing customer for up to six specific telephone (O) numbers.

The customer creates a screening list of up to six telephone numbers through an interactive dialing sequence. When (0) a call is received from one of the predetermined telephone numbers, the customer is alerted. Calls from the telephone numbers not included on the screening list will produce a normal ring.

When a telephone number on the Personalized Ring 6 screening list also appears on the Selective Call Forwarding ^(O) list, the Preferred Call Forwarding will take precedence. Likewise, when the same number is shown on the Call Block list, the call will be blocked.

The customer's line will not produce an alert if the incoming call is from a telephone number in a hunt group unless (O) the telephone number is the main number of the hunt group, or is Telephone Number identified.

- r. Repeat Dialing Repeat Dialing, when activated, automatically redials the last number the customer attempted to call. If the called line is not busy, the call will be placed. If the called line is busy, a confirmation announcement is heard, the customer hangs up and a queuing process (0) begins. For the next thirty minutes both the calling and called lines are checked periodically for availability to complete the call. If during this queuing process the called line becomes idle, the customer is alerted that the network is ready to place the call. When the customer picks up the telephone, the call will automatically be placed.
 s. Call Forwarding Multiple Simultaneous This feature allows a station line to forward more than one call at a time. (0)
 t. Automatic Line/Direct Connect (0)
- t. Automatic Line/Direct Connect Station specially programmed to dial specific internal station number or "0" or the attendant when the station user goes off-hook.
- a. Selective Call Acceptance

Allows customers to accept incoming voice calls only from certain telephone numbers selected by the customer. Station Restriction

Allows a station line to be assigned various type of restriction.

- Denied Termination allows the station line to be used for outgoing calls only. It cannot receive incoming calls. (O) All incoming calls are routed to common intercept announcement.
- Denied Origination from Outgoing Calls allows the station line to be used for incoming calls only. No outgoing (0) calls can be originated from it.
- w. Redirected Number Feature Redirected number delivery may be provided as a termination feature. If the received (T)(O) call has been previously forwarded, the first and last forwarding DN's will be delivered to the called party who subscribes to redirected number delivery.
