

1. DETERMINATION OF TOLL RATE DISTANCES BETWEEN POINTS WITHIN THE STATE OF OHIO

To determine the rate distance between any two rate centers proceed as follows:

Step 1. Obtain the "V" and "H" coordinates for each rate center.

Step 2. Obtain the difference between the "V" coordinates of the two rate centers. Obtain the difference between the "H" coordinates.

Note: The difference is always obtained by subtracting the smaller coordinate from the larger coordinate.

Step 3. Divide each of the differences obtained in Step 2 by three, rounding each quotient to the nearer integer.

Step 4. Square these two integers and add the two squares.

If the sum of the squares is greater than 1777, divide the integers obtained in Step 3 by three and repeat Step 4. Repeat this process until the sum of the squares obtained in Step 4 is less than 1778.

Step 5. The number of successive divisions by three in Steps 3 and 4 determines the value of "N". Multiply the final sum of the two squares obtained in Step 4 by the multiplier specified in the following table for this value of "N" preceding.

N	Multiplier	Minimum Rate Mileage
1	0.9	-
2	8.1	41
3	72.9	121
4	656.1	361

1. DETERMINATION OF TOLL RATE DISTANCES BETWEEN POINTS WITHIN THE STATE OF OHIO (cont'd)

Step 6. Obtain square root of product in Step 5 and, with any resulting fraction, round up to next higher integer. This is the message rate mileage except that when the mileage so obtained is less than the minimum rate mileage shown in Step 5 preceding, the minimum rate mileage corresponding to the "N" value is applicable.

Example:

The message rate distance is required between Toledo and Marietta.

	V	H
a. Toledo	5704	2820
Marietta	5938	2270
b. difference	234	550
c. (1) dividing each difference by three and rounding to nearer integer = 78 and 183.		
d. (1) squaring integers and adding.	$78 \times 78 = 6,084$	
	$183 \times 183 = \underline{33,489}$	
sum of squared integers		39,573

sum of squared integers is greater than 1777, so divide integers in c.(1) by three and repeat d.(1).

1. DETERMINATION OF TOLL RATE DISTANCES BETWEEN POINTS WITHIN THE STATE OF OHIO (cont'd)

Step 6. (cont'd)

Example: (cont'd)

c. (2) dividing integers in c.(1) by three and rounding = 26 and 61.

d. (2) squaring integers and adding, $26 \times 26 = 676$
 $61 \times 61 = \underline{3,721}$
 sum of squared integers 4,397

sum of squared integers is greater than 1777, so divide integers in c.(2) by three and repeat d.(2).

c. (3) dividing integers in c.(2) by three and rounding = 9 and 20

d. (3) squaring integers and adding, $9 \times 9 = 81$
 $20 \times 20 = \underline{400}$
 sum of squared integers 481

This sum of squared integers is less than 1778 and was obtained after three successive divisions by three, therefore "N" = 3.

e. Multiply final sum of squared integers by factor 72.9 (corresponding to "N" = 3).

$$\begin{array}{r} 481 \\ \times 72.9 \\ \hline = 35,064.9 \end{array}$$

f. Square root of 35,064.9 = 187 and a fraction, which is rounded up to 188 miles (fractional miles being considered full miles). The 188 miles is larger than the minimum 121 rate miles applicable when "N" = 3, so the message rate mileage is 188 miles.
