C. Conditioning (Voice Grade Services)

1. Conditioning provides more specific transmission characteristics for data services. There are two types of C-conditioning and one type of D-conditioning, each with different technical specifications. C-Type conditioning controls attenuation distortion and envelope delay distortion. D-Type conditioning controls the signal to C-notched noise ratio and intermodulation distortion.

Conditioning is charged for on a per Local Channel basis for two-point and multi-point service. For two-point services the parameters apply to each service. For multipoint services the parameters apply to any path between any two service points.

2. The types and description of the available conditioning options are as follows:

| Type Conditioning            | Frequency Response Specification   | Envelope Delay Distortion Specification   |
|------------------------------|--|---|
| C1 (two-point or multipoint) | 300-2700 Hz,<br>-2dB to +6dB.<br>1000-2400 Hz,<br>-1dB to +3dB.                                  | 1000-2400 Hz, less<br>than 1000 microseconds  |

3. When a channel is equipped with Type D1 conditioning and is utilized for voice communications, the Company does not undertake to represent that the channel will be suitable for such voice transmission.
4. C-Type Conditioning
  - a. C-Type Conditioning is available for Types 2463 and 2464.
