A12.26 BellSouth Centrex ISDN Service
A12.26.1 General

A. BellSouth Centrex ISDN is an intraLATA group of offerings supported by the Integrated Services Digital Network (ISDN)   (T)
architecture. BellSouth Centrex ISDN supports simultaneous transmission of voice, data, and packet services on the same
exchange access line. Calling/Called Number Delivery, Calling Name Delivery in equipped 5ESS and EWSD switches, Call
Hold and Intercom are included with this service. BellSouth Centrex ISDN is available only for use with BellSouth Centrex
service. BellSouth Centrex ISDN provides access to the network through a Basic Rate Digital Subscriber Line (DSL) Access
Arrangement. Basic Rate Digital Subscriber Line (DSL) Access Arrangement will allow transmission on one or two 64 Kbps
(B) channels and one 16 Kbps (D) channel at the service delivery point.

B. B channel circuit switched services offer up to 64 Kbps intra-office transmission of voice or data. This option permits the
customer to utilize either circuit voice or data transmission paths on a per call selection basis. Transmission on the B channel
will be circuit switched at 64 Kbps within the switch and/or equipped facilities between ISDN compatible central offices.
ISDN interconnection to non-ISDN equipped central offices will be potentially subjected to analog transmission or sub-rated
to 56 Kbps. This option includes one directory number (DN) per user access.

The ISDN Standard Features rate element is required for each B channel circuit switched user access.
