B103. OBSOLETE SERVICE OFFERINGS - CHANNELS

B103.1 Provision Of Service

Effective June 30, 2021, Channel Services will no longer be available for purchase by new or existing customers, and service agreements may no longer be renewed. In addition, requests to move, add or change existing service arrangements will not be accepted. Following the expiration of a customer's existing term agreement, service will be provided on a month-to-month basis at the applicable Monthly rates until the service is discontinued. The Company currently plans to discontinue these services on or after June 30, 2024. (N)

B103.1.1 General

- A. Channel Services provided under the provisions of this Guidebook are offered for IntraLATA Services only. Services consisting of Local Channels, Interoffice Channels, and Optional Features and Functions are classified by series. The various series are sub-divided into different types and are described in terms of circuit characteristics and use. (T)(O)
- B. Customers may order local channels which are designed to meet specific communications requirements. The customer is responsible for determining that his terminal equipment is compatible with the service provided by the Company. (T)(O)
- C. Where multipoint service is furnished, the local channels are bridged in the wire center. (O)
- D. Dedicated circuits between the customer's interLATA Digital Electronic Tandem Switching (DETS) or Tandem Switching Features (TSF) function and the customer's other location(s) within the same LATA will be provided from this Guidebook. Where this service is provided by the Company as a feature of Digital ESSX service, MultiServ service, MultiServ PLUS service, or BellSouth Centrex service, the transport of traffic between the DETS or TSF function and the basic Digital ESSX service, MultiServ service, MultiServ PLUS service, or BellSouth Centrex service functions may be performed by the Company's network switching facilities. (O)
- E. Channels requiring placement of new cable or wire facilities between two or more points on a customer's continuous property are no longer available effective January 1, 1987 (see B103.2). However, where spare channels are available in existing Company-Owned facilities on a customer's continuous property, such channels may be available for the customer's use at the sole discretion of the Company, subject to the terms, conditions, and charges specified in Section B103. (O)

B103.1.2 Application

The rates and charges specified herein apply for all IntraLATA Private Line services provided by the Company. (O)

- A. Reserved for Future Use
- B. Continuous Property Channels
 - 1. New channels between points on the same customer's continuous property are provided at the sole discretion of the Company and only where spare capacity is available in existing facilities.
 - 2. A Continuous Property Channel consists of one pair (half duplex) or two pairs (full duplex) of metallic conductors with the physical and electrical transmission characteristics inherent to the existing facility. Equipment that is required to improve or alter the transmission characteristics of the channel is the responsibility of the customer and must be connected on the customer's side of the network interface. The customer may not access or alter a Continuous Property Channel in mid-span; nor install any equipment which results in harm to the facility or other channels within the cable or wire facility.
 - 3. Subject to paragraph A, when twenty-five or more half duplex channels are required between the same two points, the Company will consider a bulk provisioning arrangement whereby the subscriber can lease channels in multiples of twenty-five channels. With bulk provisioning arrangements, no subsequent recurring or nonrecurring charges apply as channels are activated by the subscriber. Rates for bulk provisioning arrangements are determined on a Special Arrangement Basis, See Section B5.
 - 4. Continuous Property Channels will be discontinued when associated cable facilities can no longer be economically maintained.

B103.1.3 Rate Categories

- A. Following are the basic rate categories which apply to Private Line service. (T)(O)
 - 1. Local Channels (O)
 - a. A local channel provides for a communications path between the demarcation point at a customer premises and the serving wire center of that premises. One local channel charge applies per channel termination. (O)
 - b. When channels extending between different premises are provided via dedicated cable facilities, a non-wire center connected channel charge applies in lieu of local channel charges. (O)
 - 2. Interoffice Channels (O)

This rate category provides for the transmission facilities between serving wire centers associated with two customer premises, between serving wire centers associated with a customer premises and a Company hub, or between two Company hubs. (O)

Interoffice mileage is portrayed in mileage bands. A flat rate and a rate per mile applies to each band. For method of determining mileage, see paragraph *B103.3.3.A*. (T)(O)

Pages 1.0.1 and 1.1 are hereby deleted in their entirety and removed from this Guidebook.

B103. OBSOLETE SERVICE OFFERINGS - CHANNELS

B103.1 General (Cont'd)

B103.1.1 *Terms and Conditions* (Cont'd)

B. Continuous Property Channels (Cont'd)

2. A Continuous Property Channel consists of one pair (half duplex) or two pairs (full duplex) of metallic conductors with the physical and electrical transmission characteristics inherent to the existing facility. Equipment that is required to improve or alter the transmission characteristics of the channel is the responsibility of the customer and must be connected on the customer's side of the network interface. The customer may not access or alter a Continuous Property Channel in mid-span; nor install any equipment which results in harm to the facility or other channels within the cable or wire facility.
3. Subject to *paragraph* A, when twenty five or more half duplex channels are required between the same two points, the Company will consider a bulk provisioning arrangement whereby the subscriber can lease channels in multiples of twenty five channels. With bulk provisioning arrangements, no subsequent recurring or nonrecurring charges apply as channels are activated by the subscriber. Rates for bulk provisioning arrangements are determined on a Special Arrangement Basis, See Section B5.
4. Continuous Property Channels will be discontinued when associated cable facilities can no longer be economically maintained.

(T)

(T)

B103. OBSOLETE SERVICE OFFERINGS - CHANNELS

B103.1 Provision Of Service (Cont'd)

(T)(O)

B3.1.3 Rate Categories (Cont'd)

(T)(O)

A. (Cont'd)

(T)(O)

3. Non-Wire Center Connected Channels

(O)

Channels between different premises of the same or different customers may be provided in existing or new cable facilities at the sole discretion of the Company. If new cable construction is required, recurring and nonrecurring charges will be determined via the Special Arrangement process (see Section B5), and will be based upon the total recurring and nonrecurring costs of the entire cable capacity provided.

(O)

See B103.4 for channel charges applicable when existing cable facilities are utilized for non-wire center connected channels.

(O)

4. Optional Features and Functions

(O)

This rate category provides for features and functions which may be added to a service to improve its quality or utility to meet specific communications requirements. These are not necessarily identifiable with specific equipment, but rather represent the end result in terms of the performance characteristics which may be obtained. This category includes a. and b. following:

(O)

a. Hub Functions

(O)

A hub is a Company designated wire center where bridging or multiplexing functions are performed i.e., connecting three or more customer premises in a multipoint arrangement or channelizing analog or digital services requiring a lower capacity or bandwidth.

(O)

b. Provides for such things as signaling, conditioning, transfer arrangements, protection switching, etc.

(O)

B103.1.4 Service Configurations

(T)(O)

A. There are two types of service configurations which can be provided. These are described as follows:

(O)

1. Two-Point Service

(O)

A two-point service connects two customer premises either directly through a serving wire center(s) or through a Company hub where additional functions are performed.

(O)

2. Multipoint Service

(O)

a. Multipoint service connects three or more customer premises through a Company hub.

(O)

b. There is no limitation on the number of mid-links available with multipoint service. However, when more than three mid-links are provided in tandem, the quality of the service may be degraded. A mid-link is a channel between hubs (i.e., bridging locations).

(O)

c. Voice Grade (Series 2000) Multipoint Channel services for data use have a limit of six two-wire facility type local channels or 20 four-wire facility type local channels when used with customer-provided station equipment.

(O)

d. Only certain types of service are available for multipoint applications. These are so designated in the service descriptions set forth in **B103.2**.

(T)(O)

B103.1.5 Special Routing Of IntraLATA Channels

(T)(O)

A. The private line services furnished in this Guidebook are provided over such routes as the Company may elect.

(O)

B. Special routing is involved where, in order to comply with requirements specified by the customer, the Company furnishes the private line service in a manner which includes one or both of the following conditions:

(O)

1. Where two or more private lines must be furnished over different physical routes.

(O)

2. Where a private line must be furnished on a route which avoids specified geographical locations.

(O)

(M)

B103. OBSOLETE SERVICE OFFERINGS - CHANNELS

B103.2 Service Descriptions

B103.2.1 Sub Voice Grade Service - Series 1000 Channels

A. The following types of sub Voice Grade Services are designed for transmission of low speed data at speeds up to 75 and up to 150 baud within certain technical specifications. These channels are furnished for half duplex and duplex operation for use with two-point or multipoint Private Line Services. The service is not suitable for the transmission of alternating current tones. (Effective 8-11-85, Obsolete Type B.)

These channels are furnished for operation on a two point or multipoint basis subject to the number of point limitations indicated for each type and are provided for use with customer-provided power and signaling equipment. It is expressly declared that metallic facilities are in continually decreasing supply and that the Company does not hold itself in a position to make such facilities available. In addition, if modernization programs dictate the replacement of existing metallic facilities with non-metallic facilities such as fiber optics, the Company will not be required to continue this service over metallic facilities and notification will be made to customers 90 days prior to elimination of the service. In consideration of the decreasing supply of metallic facilities, the Company will convert, at the customer's request, service requiring such facilities to a Voice Grade Service and waive the nonrecurring charges associated with the change. In the event the Company's service date for the requested Voice Grade Service cannot be accommodated within the 90 day period following notification to the customer, elimination of the metallic facilities will be extended to the Company's service date for the Voice Grade Service. This applies to customers where metallic facilities are being replaced with non-metallic facilities, or a customer may elect to make this change at any time prior to a modernization program that would eliminate the availability of metallic facilities. The various types of services furnished within this Series are as follows:

1. Type 1204 - a two-wire interface with two-wire facilities suitable for use with direct current continuity type of equipment. Signaling must be within the criteria as described in Technical Reference, "Transmission Specifications for Private Line Metallic Circuits" and limited to three station locations. This type channel may also be used to furnish auxiliary features (such as lights, hold, signaling, etc.)

- Current applied by CPE - ac & dc components per conductor, not to exceed 0.150 amperes rms
- Magnitude of the peak of the voltage - not to exceed 70.7 volts (50 volts rms) except continuous dc voltage not to exceed 135 volts.

2. Type 1205 - A two-wire interface with two-wire facilities suitable for low speed, uni-directional series-operated signaling. Transmission specifications as described in Technical Reference, "Transmission Specification for Low Speed Signaling System Channels". Service is limited to three serving wire centers and 26 stations.

B. The types of local channel and the transmission characteristics offered for termination at the premises for termination in customer-provided terminal equipment and systems are as follows:

1. Type 1150 (Intraexchange)

A four-wire interface engineered for binary signals at rates up to 75 baud, 20 or 62.5 milliamperes dc neutral signals. The terminal equipment with a transmitted output of no more than 8 percent telegraph distortion local and capable of processing received data signals with up to 35 percent telegraph distortion.

The Company has the option of providing 20 or 62.5 milliamperes and will notify the customer of the current level to be supplied. The Company will supply the line voltage and provide for the current adjustment. The maximum open circuit voltage across the send data leads at the interface will not exceed 270 volts.

2. Type 1151 (Intraexchange)

EIA Standard RS232B type interface engineered for binary signals at rates up to 150 baud and the terminal equipment with a transmitted output of not more than 5 percent telegraph distortion and capable of processing received data signals with up to 40 percent telegraph distortion.

3. Type 1050 (Interexchange)

A four-wire interface engineered for binary signals at rates up to 75 baud, 20 or 62.5 milliamperes dc neutral signals. The terminal equipment with a transmitted output of no more than 8 percent (8%) telegraph distortion local and capable of processing received data signals with up to 35 percent (35%) telegraph distortion.

The Company has the option of providing 20 or 62.5 milliamperes and will notify the customer of the current level to be supplied. The Company will supply the line voltage and provide for the current adjustment. The maximum open circuit voltage across the send data leads at the interface will not exceed 270 volts.

4. Type 1051 (Interexchange)

EIA Standard RS232B type interface engineered for binary signals at rates up to 150 baud and the terminal equipment with a transmitted output of not more than 5 percent (5%) telegraph distortion and capable of processing received data signals with up to 40 percent (40%) telegraph distortion.

Page 3.1 is hereby deleted in its entirety and removed from this Guidebook.

B103.2.1 Series 1000 - Sub Voice Grade Service (Cont'd)

D. Rates and Charges (Cont'd)

2. (Cont'd)

	Installation Charge	Monthly Rate	USOC	
d. Two point service (Obsoleted 01/01/87, Type B. See B103.2.2 for leasing of Continuous Property Channels where spare capacity is available in existing cable facilities.)				
(1) Same building				
(a) Type 1204	\$16.45	\$1.13	1LM++	
(b) Type 1205	16.45	1.13	1L3++	
e. Each additional point of termination (Obsoleted 01/01/87, Type B; Guidebook Reference Section B3.)				(T)
(1) In the same building for two point service in <i>paragraph</i> B103.2.1.E.2.c or d.				(T)
(a) Type 1204	-	1.13	1LM++	
(b) Type 1205	-	1.13	1L3++	
f. Two Series Legs Service (Obsoleted 07/02/90, Type B; Guidebook Reference Section B3.)				(T)
(1) Installation charge applicable only when provided subsequent to the installation of the initial intraexchange channel.				
(a) Charge	14.55	4.03	2LG	

B103. OBSOLETE SERVICE OFFERINGS - CHANNELS

B103.2 Service Descriptions (Cont'd)

B103.2.1 Sub Voice Grade Service - Series 1000 Channels (Cont'd)

- C. Parameters and Specifications for Sub Voice Grade Local Channels used with Customer-Provided Station Equipment (CPE) (described in B103.2.1.B.). The following type specifications apply. (M)
1. Basic Parameters With Specification Or Limit (M)
 - a. Channel Signals (M)

Local channels used with CPE - as specified in B103.2.1.B. Note that the specifications of channel signals refer to the requirement of the total service offering and not the individual local channel. (M)
 - b. Channel Distortion (M)

Local channels used with CPE - as specified in B103.2.1.B. Note that the specifications for channel distortion refer to the requirement of the total service offering and not the individual local channel. (M)
 - c. Power Requirement (M)

For up to 75 Baud Type - Where the Company provides transmission equipment at the interface. The customer must provide a source of continuous 117-volt, 60 Hz ac power by means of a non-switched outlet. (M)

For up to 150 Baud - Customer must in all cases provide a source of continuous 117-volt, 60 Hz ac power, non-switched outlet. (M)

The Company will in all cases supply all voltage and current adjustments. (M)

These channels are not suitable for the transmission of alternating current tones. (M)
 - D. Reserved for Future Use (M)

B103. OBSOLETE SERVICE OFFERINGS - CHANNELS

B103.2 Service Descriptions (Cont'd)

B103.2.2 Voice Grade Service - Series 2000

A. Series 2000 voice grade service provides for voice and/or data communications on a two-point or multipoint basis for service 7 days per week, 24 hours per day, for a minimum period of one month. These channels may also be furnished on a link (partial channel) basis when connected to services such as FlexServ service, LightGate service or MegaLink channel service. Channels which provide tie line service will not be furnished to connect a flat rate system with a message rate system. The transmission characteristics and various types of services furnished within this Series are described in B. and C. (O)

B. Basic parameters and specifications for Series 2000 voice grade service are described for the end to end operation as follows: (O)

Basic Parameters	For Speech Application	For Data Application	
Net Loss	Local Channels used with terminal equipment: Limit as specified in the following Local Channel descriptions. Losses or gains present in CPE have not been included.		(O)
DC Resistance	Local Channel limit as specified in the following Local Channel descriptions. Does not imply or guarantee end to end DC continuity.		(O)
Frequency Error	Plus or Minus 5 Hz	Plus or Minus 5 Hz	(O)
Frequency Response	(Referenced to 1000 Hz Loss)		(O)
300 - 3000 Hz	-3dB to + 12dB	-3dB to +12dB	(O)
500 - 2500 Hz	-2dB to + 8dB	-2dB to + 8dB	(O)
Envelope Delay Distortion			(O)
800 - 2600 Hz	Not Controlled	Less than 1750 Microseconds	(O)
C-Notched Noise (with a -13dBm0 1000 Hz Test Signal)	Not Controlled	Noise level 24dB below signal level	(O)
Impulse Noise	Not Controlled	15 Counts in 15 minutes at a threshold of 6dB below a -13dBm0 rms 1000 Hz Signal	(O)
Phase Jitter	Not Controlled	10 degrees peak to peak	(O)
Non-Linear Distortion			(O)
2nd Order Distortion	Not Controlled	25dB below signal level	(O)
3rd Order Distortion	Not Controlled	30dB below signal level	(O)

C. Transmission parameters for voice grade service are described following: (O)

1. Type 2230 - A two-wire interface with effective two-wire facilities engineered for a 1004 Hz net loss of 0 to 10dB. Generally furnished for voice transmission - Private Line Telephone, Mobile Radio Telephone, or Supervisory Control Use. Multipoint service may be provided at charges specified in B3.4.4.A. following. (O)
2. Type 2231 - A two-wire interface with two or four-wire facilities engineered for a 1004 Hz net loss of 0dB to 4.5dB. This is generally used for PBX (or similar system) off-premises main or extension station services. Signaling is required for this service. (O)
3. Type 2432 - A two or four-wire interface with effective four-wire facilities engineered for tie line service use between PBX's or customer-provided communications systems. Signaling is required for this service. (O)
4. Type 2434- A two or four-wire interface for connection to the serving wire center where loop facilities are not required. This channel is suitable for tie line service (with E&M signaling) between Centrex or ESSX-1 Systems and may be connected with Type 2432 local channels. (O)
5. Type 2435 - A four-wire interface with effective four-wire facilities engineered for a 1004 Hz net loss of 0 to 16db. Generally furnished for voice transmission. Multipoint service may be provided at charges specified in B3.4.4.A. following. (O)
6. Type 2261 - A two-wire interface with effective two-wire facilities engineered for use in Telemetry/Alarm Bridging Service (TABS). (O)
7. Type 2462 - A four-wire interface with effective four-wire facilities engineered for use in Telemetry/Alarm Bridging Service (TABS). (O)
8. Type 2463 - A four-wire interface with four-wire facilities engineered for a 1004 Hz net loss of 16dB. Generally used in the provision of analog data services. Multipoint service may be provided at charges specified in B3.4.4.A. following. (O)
9. Type 2464 - A two-wire interface with four-wire facilities engineered for a 1004 Hz net loss of 16dB. Generally used in the provision of analog data services. Multipoint service may be provided at charges specified in B3.4.4.A. following. (O)

B103. OBSOLETE SERVICE OFFERINGS - CHANNELS

B103.2 Service Descriptions (Cont'd)

B103.2.2 Voice Grade Service - Series 2000 (Cont'd)

- D. Signaling Arrangements** (O)
1. Off Premises Stations (O)
 - a. For use with PBX (or similar system) off-premises channels for terminal equipment. Signaling arrangements are furnished for grandfathered and registered PBX (or similar) systems in accordance with Part 68 of the FCC Rules and Regulations or for customer-provided communications systems not subject to Part 68 of the FCC Rules and Regulations. (O)
 - Type A - Furnished for use with Class A PBX (or similar) system station ports capable of operation over loops with resistance in the range of 0-199 ohms. (O)
 - Type B - Furnished for use with Class B PBX (or similar) system station ports capable of operations over loops with resistance in the range of 200-899 ohms. (O)
 - Type C - Furnished for use with Class C PBX (or similar) system station ports capable of operation over loops with resistance in the range of 900 ohms or more. (O)
 - b. For connections to registered or grandfathered PBX (or similar) system equipment, the customer must specify the equipment capability for use with Type A, B, or C Signaling Arrangements. (O)
 2. Tie Lines (O)
 - a. E&M signaling is provided for use with tie line channels with E&M signaling interfaces. Signaling Arrangements are furnished for grandfathered and registered PBX's in accordance with Part 68 of the FCC Rules and Regulations or for customer-provided communications systems not subject to Part 68 of the FCC Rules and Regulations. (O)
 - An E&M Signaling Arrangement is required for each tie line termination, operating in a Dial Repeating mode, at a customer's premises with a registered PBX. (O)
 - An E&M Signaling Arrangement is required for each tie line termination at a customer's premises with grandfathered PBX's when the tie line is arranged with an E&M signaling interface. (O)
 - An E&M Signaling Arrangement is not required with Types 2432 and 2434 channels for additions to or for new installations of grandfathered PBX equipment when not arranged with an E&M signaling interface. (O)
 - An E&M Signaling Arrangement is required for each Type 2432 or 2434 channel termination at a customer's premises with a customer-provided communications system not subject to Part 68 of the FCC Rules and Regulations when arranged with an E&M signaling interface. (O)

(M)

B103. OBSOLETE SERVICE OFFERINGS - CHANNELS

B103.2 Service Descriptions (Cont'd)

(T)(O)

B103.2.2 Voice Grade Service - Series 2000 (Cont'd)

(T)(O)

E. Telemetry/Alarm Bridging Service (TABS)

(T)(O)

1. Terms and Conditions

(O)

- a. This Section contains the terms and conditions applicable for Telemetry/Alarm Bridging Service (TABS) (O)
- b. Except as otherwise specified following, the terms and conditions contained herein are in addition to the terms and conditions found in other sections of this Guidebook. (O)
- c. TABS requires the use of equipment as specified in paragraph **B103.2.2.E** and Type 2261 or 2462 voice grade local channels described in paragraph **B103.2.2.C**. (T)(O)
- d. Terminal equipment provided by the customer for use with TABS must meet specifications for such customer-provided equipment found in other sections of this Guidebook. (O)
- e. No more than 128 remote stations may be connected to a master station over an individual Split Band Active Bridge. (O)
- f. In Split Band Active Bridging arrangements, secondary bridges must be directly connected to the primary bridge via mid-link channels. Secondary bridges cannot be connected through other secondary bridges to allow additional layers of tandeming.
- g. Secondary bridges, utilized in Split Band, Active Bridging arrangements, reduce the two-wire remote station capacity of the primary bridge. The initial secondary bridge reduces the primary bridge capacity by twelve two-wire remote station connections. Each subsequent secondary bridge reduces the primary bridge capacity by four additional two-wire remote station connections. At the customer's option external bridging may be provided for connecting secondary bridges at the rate applicable in paragraph **B103.4.4.A.1.a** without reducing the two-wire capacity of the primary bridge. (T)(O)
- h. Standard multipoint bridging charges as provided in other sections of this Guidebook are not applicable to TABS, except as provided in paragraph g. (O)
- i. Access over four-wire master station channels for Split Band Active Bridging is provided using a Type 2462 local channel. (O)
- j. Access over remote station channels is provided through a Type 2261 local channel and through the appropriate channel connection as contained in paragraph **B103.4.4.A.1.e**. Interconnection of remote stations located outside the serving wire center where the bridge to which they are to be connected is located will require interoffice channels at charges contained in **B103.4.3**. (T)(O)
- k. Access over each four-wire mid-link channel for Split Band Active Bridging is through voice grade interoffice channels at charges contained in **B103.4.3**. Additionally, mid-link channel connections are required as described in paragraph **B103.4.4.A.1.e**. (T)(O)

2. Service Description

(O)

- a. Telemetry/Alarm Bridging Service is a multi-station, voice frequency, private line service designed to provide connections between a master station and a number of remote stations simultaneously. Direct transmission between remote stations is not intended. This service is intended for application in multipoint, voice frequency, data or tone signaling arrangements with transmission at rates up to 400 baud. (O)
- b. TABS is provided in the following arrangement: (O)
 - Split Band, Active Bridging - A bridging arrangement providing for a four-wire (master station or mid-link channel) frequency split common port and multiple two-wire (remote station) ports intended for application in multipoint, voice frequency, data or tone signaling arrangements. Two-way (polling) communication between the master station and each remote station is intended. (O)

(M)

Page 4.3 is hereby deleted in its entirety and removed from this Guidebook.

B103. OBSOLETE SERVICE OFFERINGS - CHANNELS

B103.2 Service Descriptions (Cont'd)

B103.2.3 Wired Music Service - Series 6000

(Obsoleted 12-1-2020, Type D; not available for new installations, moves or transfers. The Company intends to discontinue this service on or after 12-1-2021.)

A. Series 6000 private line service provides for one-way audio transmission for use in connection with loudspeaker and sound recording equipment. Channels are furnished for operation on a two-point or multipoint basis for service 7 days per week, 24 hours per day, for a minimum period of one month. These channels are arranged for use with customer-provided station equipment only.

B. Channels for audio and wired music are furnished only directly to the customer originating the program material. The Company does not allocate charges between, nor collect charges from the patrons of the customer. The customer is responsible for the payment of all charges for channels furnished to him by the Company.

C. Audio Channels

1. Audio private line channels are specially equipped channels provided for the closed circuit (non-broadcast) transmission of voice and music signals in one direction only for operation on a two-point basis.

Any of the following arrangements may be provided as a two-point audio private line service:

- a. Two local channels in the same wire center area connected together at the serving central office.
- b. Two local channels not in the same wire center area connected by an interoffice channel.
- c. One local channel feeding a music distribution amplifier when the music source is in the same wire center area as the distribution amplifier.
- d. One local channel and an interoffice channel feeding a music distribution amplifier when the music source is not in the same wire center area as the distribution amplifier.
- e. One interoffice channel connecting music distribution amplifiers in different wire center areas.

2. The various types of services furnished as audio channels are described as follows:

- a. Type 6211 - A two-wire interface with effective two-wire facilities engineered for a 1000 Hz maximum loss of 12dB without equalization.
- b. Type 6212 - A two-wire interface engineered for a 1000 Hz maximum loss of 12dB and equalized to + or - 1dB of the 1000 Hz loss from 100 to 5000 Hz.
- c. Type 6213 - A two-wire interface engineered for a 1000 Hz maximum loss of 12dB and equalized to + or - 1dB of the 1000 Hz loss from 50 Hz to 8000 Hz.

D. Wired Music Multipoint Distribution Channels

1. Wired music multipoint distribution private line channels are specially equipped channels provided for the closed circuit (non-broadcast) transmission of voice and music signals in one direction only for operation on a multipoint basis.

2. A wired music multipoint distribution service consists of one or more distribution amplifiers feeding multiple wired music local channels within a wire center area. Local channels and interoffice channels required to connect the music source to the wired music multipoint distribution system or to connect distribution amplifiers in separate wire centers are provided as two-point audio channels.

- a. Distribution amplifiers provided by the Company are required to receive signals from a source provided by the customer and to transmit the appropriate signal level to the multiple wired music local channels which the amplifiers may feed. Distribution amplifiers are provided at the serving wire center.
- b. Wired music local channels are furnished within a wire center area between the premises of the patrons of the wired music service and the distribution amplifier located in the serving wire center.

3. The various types of services furnished as wired music channels are described as follows:

- a. Type 6215 - A two-wire interface with effective two-wire facilities engineered for a 1000 Hz maximum loss of 14dB without equalization.
- b. Type 6216 - A two-wire interface engineered for a 1000 Hz maximum loss of 14dB and equalized to + or - 4dB of the 1000 Hz loss from 100 to 5000 Hz.
- c. Type 6217 - A two-wire interface engineered for a 1000 Hz maximum loss of 14dB and equalized to + or - 4dB of the 1000 Hz loss from 50 Hz to 8000 Hz.

B103. OBSOLETE SERVICE OFFERINGS - CHANNELS

B103.3 Application of Rates

B103.3.1 Reserved for Future Use (M)

- A. Reserved for Future Use (M)
- B. Reserved for Future Use (M)

B103.3.2 Reserved for Future Use (M)

B103.3.3 Mileage Measurements (M)

- A. Reserved for Future Use (M)
- B. Reserved for Future Use (M)
- C. Reserved for Future Use (M)
- D. For Series 6000 channels the customer may specify the sequence in which the service points are to be connected in which case the rate mileage is the shortest airline mileage determined in accordance with paragraph C, which will connect the wire centers of the service points in the specified sequence. (M)

B103.3.4 Methods of Applying Rates (M)

- A. Additional point of termination of a Local Channel in Different Buildings on the Same Premises (M)
(Obsoleted 01/01/87, Type B; Guidebook Reference B3.) (M)
 - 1. A charge, as provided in paragraph B103.3.4.A.2 for extending a Local Channel and terminating the channel at a station location in a different building on the same premises shall apply in lieu of an additional Local Channel Charge when conditions and facilities permit; otherwise the local channel charge applies. (M)
 - 2. When additional points of termination of a single private line service are located in different buildings on the same premises, the charge for the channel shall be based on the airline distance between each pair of buildings. The rates are specified in B103.4. (M)
- B. Additional Point of Termination of a Local Channel in the Same Building (M)
(Obsoleted 01/01/87, Type B; Guidebook Reference B3.) (M)
A charge as provided in B103.4 for extending a Local Channel and terminating the channel at a station location in the same building applies in lieu of an additional local channel charge. (M)
- C. Same Building Channel (M)
(Obsoleted 01/01/87, Type D; available solely at the discretion of the Company for new service, additions, or transfer of service where spare capacity is available in existing cable facilities.) (M)
When all station locations of a private line service are in the same building, the charge for same building channel specified in B103.4 applies. (M)
- D. Channels Between Buildings on the Same Premises (M)
(Obsoleted 01/01/87, Type D; available solely at the discretion of the Company for new service, additions, or transfer of service where spare capacity is available in existing cable facilities.) (M)
When station locations of a private line service are located in different buildings on the same premises the charge for the channel shall be based on the airline distance between each pair of buildings when conditions and facilities permit. The charges are as specified in B103.4. (M)
Where a supporting structure is necessary for the purpose of furnishing these channels on the subscriber's premises, such supporting structure will be furnished by the subscriber as provided for in "Construction on Private Property" in Section A5 of the General Exchange Guidebook. (M)

B103. OBSOLETE SERVICE OFFERINGS - CHANNELS

B103.3 Application of Rates (Cont'd)

(DELETED)

B103.3.5 Types Of Rates And Charges

- A. The two types of rates and charges are monthly rates and nonrecurring charges and are described as follows: (O)
- 1. Monthly Rates (O)
 - a. Monthly rates are recurring charges that apply each month or fraction thereof that a service is provided. For billing purposes, each month is considered to have 30 days. (O)
 - b. (DELETED) (O)
 - c. (DELETED) (O)
 - d. Rates applicable to a month-to-month payment option are subject to Company initiated changes. (O)
- 2. Nonrecurring Charges (O)

Nonrecurring Charges are one-time charges that apply for a specific work activity. The three types of nonrecurring charges that apply are installation of service, installation of features and functions and service rearrangements. (O)

 - a. Installation of Service (O)

Nonrecurring charges apply for each service terminated at the customer's premises. For the installation of local channels when more than one of the same type of service, between the same locations, for the same customer is ordered and installed at the same time, one at each location is billed at the First Service Installed rate and the others are billed at the Additional Service Installed rate. (O)

The nonrecurring charges for the Installation of Services are set forth in **B103.4** as Nonrecurring Charges for the Local Channel and Interoffice Channel rate elements. (T)(O)

Rates and charges for Network Interface Equipment are set forth in Section A14 of the General Exchange Guidebook. (O)
 - b. Nonrecurring charges apply for the installation of features and functions available with the various services. For some features and functions there is a lower charge if installed coincident with the service and a higher charge if installed subsequent to the service. (O)
 - c. Service Rearrangements (O)
 - (1) Service rearrangements are changes to existing (installed) services which do not result in either a change in the minimum period requirements or a change in the physical location of the point of termination at a customer premises. Changes which result in the establishment of new minimum period obligations are treated as disconnects and starts. Changes in the physical location of the point of termination are treated as moves and are described and charged for as set forth in **B103.3.2**. (T)(O)
 - The charge to the customer for the service rearrangement is dependent on whether the change is administrative only in nature or involves actual physical change to the service. (O)
 - Administrative changes will be made without charge(s) to the customer. Such changes require the continued provision and billing of the Private Line Service to the same entity (i.e., customer remains responsible for all outstanding indebtedness for the service). Administrative changes are as follows: (O)
 - Change of customer name (i.e., the customer of record does not change but rather the customer of record changes name), (O)
 - Change of customer's premises address when the change of address is not a result of a physical relocation of equipment. (O)
 - Change in billing data (name, address or contact name or number). (O)
 - Change of jurisdiction, e.g., intraLATA to intrastate, intrastate to interstate, etc. No Termination Liability Charges apply for services billed under the Channel Services Payment Plan (CSPP) if the customer subscribes to a payment arrangement offered in the appropriate guidebook which is a minimum twenty-four-month service period or equals/exceeds the remaining contract period, whichever is greater. (O)

B103. OBSOLETE SERVICE OFFERINGS - CHANNELS

B103.3 Application of Rates (Cont'd)

(DELETED)

B103.3.5 Types Of Rates And Charges (Cont'd)

A. (Cont'd)

2. Nonrecurring Charges (Cont'd)

c. Service Rearrangements

(2) All other service rearrangements will be charged for as follows: (Cont'd)

- If the change involves the addition of other customer designated premises to an existing multipoint service, the nonrecurring charge for the local channel rate element(s) being added will apply. Nonrecurring charges for interoffice channel mileage may also apply. (O)
- If the change involves the addition of other customer designated premises to an existing two-point service, resulting in a multipoint circuit configuration, the nonrecurring charge for the local channel rate element(s) being added will apply. Nonrecurring charges for interoffice channel mileage may also apply. (O)
- If the change involves the disconnection of a customer designated premises from an existing multipoint circuit resulting in a two-point circuit configuration, no charges will apply. (O)
- If the change involves the addition of an optional feature or function which has a separate nonrecurring charge, that nonrecurring charge will apply. (O)
- If the change involves changing the type of signaling on a voice grade service the subsequent, nonrecurring charge will apply for the new type signaling. The charge will apply per service termination affected. (O)
- For rearrangements and all other activities involving physical changes to the service provided or the addition of optional features without separate nonrecurring charges, a charge equal to a local channel rate element nonrecurring charge will apply. Only one such charge will apply per service order, per change. (O)
- For a change of customer of record, where no specific transfer of service charge is stated, and for all other activities involving no physical changes, the following charges will apply: 1) if the request is for multiple circuits of the same type, a charge equal to one "First" Local Channel nonrecurring charge applies, 2) if the request is for only one circuit, a charge equal to one "Additional" Local Channel nonrecurring charge applies, 3) if the request is for multiple circuits of different types, charges will be applicable for each type of circuit according to the same guidelines in 1) and 2). (O)

B103.3.6 Moves

A. A move involves a change in the physical location of one of the following:

1. The point of interface at the customer premises. (O)
2. The customer's premises. (O)

B. The charges for the move are dependent on whether the move is to a new location within the same building or to a different building. (O)

1. Moves Within the Same Building (O)

When the move is to a new location within the same building, the charge for the move will be an amount equal to one-half the nonrecurring (i.e., installation) charge for the affected service termination at the customer's premises. There will be no change in the minimum period requirements. If a move is made at the same time a service rearrangement is made, the total charge will never exceed a full nonrecurring charge for the basic service. (O)

2. To a Different Building (O)

Moves to a different building will be treated as a discontinuance and start of service and all associated nonrecurring charges will apply. New minimum period requirements will be established at the new location. The customer will also remain responsible for satisfying all outstanding minimum period charges for the discontinued service. (O)

B103.3.7 Mileage Measurements

A. When station locations of a private line service are located in different wire center serving areas, interoffice channel charges apply. Charges are based on the direct airline distance measured between the serving wire centers. Mileage is determined in accordance with the following: (O)

1. Obtain the "V" and "H" coordinates for each wire center, as listed in the National Exchange Carrier Association Tariff F.C.C. No. 4. (O)
2. Obtain the difference between the "V" coordinates of the two wire centers. Obtain the difference between the "H" coordinates. The difference is always obtained by subtracting the smaller coordinate from the larger coordinate. (O)
3. Square each difference obtained in paragraph 2. (O)
4. Add the squares of the "V" difference and the "H" difference obtained in 3. preceding. (O)
5. Divide the sum of the squares obtained in paragraph 4, by 10. (O)

Page 6.1 is hereby deleted in its entirety and removed from this Guidebook.

B103. OBSOLETE SERVICE OFFERINGS - CHANNELS

B103.3 Application of Rates (Cont'd)

(DELETED)

B103.3.7 Mileage Measurements (Cont'd)

A. (Cont'd)

- 6. Obtain the square root of the result obtained in paragraph 5. This is the rate distance in miles (fractional miles being considered as full miles).

EXAMPLE: The rate distance is required between City One and City Two.

	V	H	
City One	7260	2083	
City Two	7364	1865	
Difference	104	218	
Squared	10,816	47,524	= 58,340
58,340 divided by 10 = 5834			
Square root of 5834 = 76.38 = 77 Airline miles			

- B. When a private line is furnished over facilities which the Company elects to provide on a direct basis and is not routed through a central office, one two-point channel charge from B3.4.2 will apply. The arrangement is limited to channels not more than one airline mile in length.
- C. For the purpose of applying multipoint charges, the bridging or hubbing locations are determined by that combination of airline distances connecting the serving wire center which will produce the lowest interoffice mileage charges. Bridging charges apply when three or more channels connect at the same location.
- D. For Series 1000 and 2000 channels the customer may specify the sequence in which the service points are to be connected in which case the rate mileage is the shortest airline mileage determined in accordance with paragraph C, which will connect the wire centers of the service points in the specified sequence.

B103.3.8 Series 7000 Channels¹

A. General

- 1. Special Terms and Conditions Regarding Provision of Service
 - a. Series 7001, 7003 and 7004 channels presently in service are to continue under the terms and conditions of the service publication existing immediately prior to October 1, 1972, until the development of a new guidebook offering becomes effective, at which time the existing service would be converted to the new guidebook offering.
 - b. Series 7001, 7003 and 7004 channels are not offered for new installations or for additions to the existing system from October 1, 1972, until a new guidebook offering becomes effective.
 - c. New Systems or additions to the existing System will be provided in accordance with B5.1.H until a new guidebook offering becomes effective, at which time said systems or additions to existing systems will be converted to the new guidebook offering.

B. Types and Descriptions

The channels for which the terms, conditions and rates in this Section apply are those furnished for the transmission in one direction only of video signals only and those furnished for television transmission of both video and audio signals. The channels are suitable for the transmission of the following monochrome signals and, where this Guidebook specifies that such channels may be used for color transmission, are suitable for transmission of the following color signals. When channels are used for color transmission, additional charges to the extent specified herein, apply.

525 Line Monochrome

For monochrome broadcasting or viewing involving 525 scanning lines per frame, interlaced two to one in successive fields, with a frame frequency of 30, a field frequency of 60, and a line frequency of 15,750 per second.

525 Line Color

For color broadcasting or viewing involving 525 scanning lines per frame, interlaced two to one in successive fields, with a frame frequency of 30, a field frequency of 60, and a line frequency of 15,750 per second and utilizing a subcarrier of a nominal 3.58 mc frequency.

1. Channel Systems

Type 7003

Local Distribution System television channels for use in educational television systems for the transmission of monochrome and color video signals and associated audio material of a single program at one time. These channels are furnished between premises of the customer, authorized users, and any combination thereof in systems of 1 to 6 channels as set forth in paragraph B103.3.8.C.1.b, and are furnished only for transmission of educational television program material by public or private schools, non-commercial educational television broadcast stations and other non-commercial educational organizations. Special operation and supervision are not provided. Systems are furnished on a 24 hour per day, 7 days per week basis for a minimum period of one month.

Note 1: Subject to Special Terms and Conditions in paragraph B103.3.8.A.

B103. OBSOLETE SERVICE OFFERINGS - CHANNELS

B103.3 Description Of Service And Rates - Interexchange (Cont'd)

B103.3.8 Series 7000 Channels¹ (Cont'd)

B. Types and Descriptions (Cont'd)

1. Channel Systems (Cont'd)

Type 7004

Interexchange System television channel for use in educational television systems for the transmission of monochrome video signals and associated audio material of a single program at one time. These channels are furnished between premises of the customer, authorized users and any combination thereof in systems of 1 to 5 channels as set forth in **paragraph** B103.3.8.C.1.c, and are furnished only for transmission of educational television program material by public or private schools, non-commercial educational television broadcast stations, other non-commercial educational organizations and for transmission of television program material by other users. Not more than two channels may be used for the transmission of color signals. Special supervision and operation are not furnished. Systems are furnished on a 24 hour per day, 7 days per week basis, for minimum period of one month. (T)

C. Terms and Conditions (T)

In addition to the *terms and conditions* set forth in Section B2, the following *terms and conditions* apply to Series 7000 Channels. (T)

1. Provision of Facilities

a. Type 7001

Type 7001 Intraexchange Channels

All station equipment and station wiring shall be provided by the customer. Video channel wiring on the property owned or leased by the customer and upon which the station is located may be included as station wiring.

b. Type 7003

Company facilities for a local distribution system are furnished within an exchange area from a signal source to its receiving locations in one direction of transmission only, and may include facilities to provide service to a receiving location outside the exchange area where the airline distance does not exceed 25 miles from its signal source, and consist of,

1 to 6 channels, between premises and between buildings on the same premises, terminating at receiving locations.

Channel input equipment for 1 to 6 channels for use at a signal source to convert the customer's signals from baseband frequencies to frequencies of approximately 25 to 88 megacycles.

Channel output equipment at receiving locations, to deliver signals at standard VHF broadcast frequencies.

Outlet connections for television viewers, with distribution amplifier equipment where required, and associated building wiring. These connections may be furnished by the customer provided the customer furnishes all such connections required within a building.

Note 1: Subject to Special *Terms and Conditions* in **paragraph** B103.3.8.A. (T)

B103. OBSOLETE SERVICE OFFERINGS - CHANNELS

B103.3 Description Of Service And Rates - Interexchange (Cont'd)

B103.3.8 Series 7000 Channels¹ (Cont'd)

C. *Terms and Conditions* (Cont'd)

1. Provision of Facilities (Cont'd)
 - b. Type 7003 (Cont'd)

Station facilities and wiring, other than items specified in *paragraph* B103.3.8.E.2 will be furnished by the customer. The facilities furnished by the customer will include, where required, (T)

 - (1) Video cameras, microphones, consoles, monitors and like studio equipment,
 - (2) Television viewers
 - (3) Antennas to pick up broadcast television material, and
 - (4) Power and space and supporting structures (including on premises conduit) for Company equipment located on the premises of a customer or authorized users, including those for terminals of interexchange systems.
 - c. Type 7004

An interexchange system consists of 1 to 5 channels furnished between a signal source in one exchange area and a receiving location in another exchange area where the distance between the signal source and its receiving location exceeds 25 airline miles. Channels are furnished in either direction of transmission but individual channels may be used for transmission in one direction only. Channel inputs and outputs are at baseband frequencies.

Station facilities and wiring, other than items specified in *paragraph* B103.3.8.E.3 will be furnished by the customer. The facilities furnished by the customer will include, where required, (T)

 - (1) Video camera, microphones, consoles, monitors and like studio equipment,
 - (2) Television viewers,
 - (3) Antennas to pick up broadcast television material and
 - (4) Power and space, and supporting structures (including on premises conduit) for Company equipment located on the premises of the customer or authorized user, including those for terminals of interexchange systems.
2. Connections With Company Facilities and Facilities of Others
 - a. Except as provided in *paragraph* B103.3.8.C.2.b, facilities furnished in connection with other services may neither be connected with television transmission channels nor be connected directly or indirectly with video broadcasting equipment at television stations. (T)
 - b. Type 7003 and Type 7004 Channels

The customer may connect Type 7003 and Type 7004 channels with the following classes of channels provided the connections are made in accordance with *paragraph* B103.3.8.C.2.b.(1) through (3), (T)

video, audio and television channels furnished by the Company where such channels transmit into educational television systems.

television channels operating on broadcast frequencies.

local television distribution systems provided by the customer.

interexchange television systems provided by the customer. (M)

Note 1: Subject to Special *Terms and Conditions* in *paragraph* B103.3.8.A. (T)

B103. OBSOLETE SERVICE OFFERINGS - CHANNELS

B103.3 Description Of Service And Rates - Interexchange (Cont'd)

B103.3.8 Series 7000 Channels¹ (Cont'd)

C. *Terms and Conditions* (Cont'd)

2. Connections With Company Facilities and Facilities of Others (Cont'd)
 - b. Type 7003 and Type 7004 Channels (Cont'd)
 - (1) Connections are made at the customer's premises. (T)
 - (2) Connections are made at a location where program material is used for television viewing, for transmission over a local distribution system, or for transmission by a broadcast station and where the customer has in attendance adequate personnel and equipment for testing with the Company. (M)
 - (3) Connections do not result in any transmission from Type 7003 or Type 7004 channels or via any other channels into Series 6000, Type 7001 or Type 7002 interexchange channels furnished under this *Guidebook* or under F.C.C. Tariff 260. (T)
3. Mileage Measurements
 - a. Type 7001
Type 7001 Intraexchange Channels
The local channel mileage is the airline distance (up to 8 miles fractional quarter miles being considered as full quarter miles and beyond 8 miles fractional miles being considered as full miles) measured directly between two stations.
 - b. Type 7003 Channels
Rate mileage is the airline distance between a signal source and its receiving locations measured directly, or via other receiving locations, for two-point or multi-point channels.
The sequence of measurement for channels involving two or more receiving locations is that sequence which will produce the shortest combination of airline mileages, except that where a customer requests that receiving locations be connected in a specific sequence, the measurement will be made in that sequence.
Where a system includes more than one signal source transmitting to common receiving locations, the measurement is made from one of the signal sources to the receiving locations (for this purpose the additional signal sources are considered as receiving locations). Where difference signal sources transmit to different receiving locations, a separate series of measurements is made for each signal source.
Each two-point section of a multi-point channel is considered a separate unit for which mileage is independently measured.
For rate application the channel having the highest total rate mileage is considered the first channel. Succeeding numbered channels will be determined consecutively in order of decreasing rate mileage.
 - c. Type 7004 Channels
Rate mileage is the airline mileage measured directly between a signal source in one exchange area and its receiving location in another exchange area, except that where the airline mileage between the rate centers of the locations is 40 or more airline miles, rate mileage is measured between the rate centers of the locations.
Note 1: Subject to Special *Terms and Conditions* in *paragraph* B103.3.8.A. (T)

B103. OBSOLETE SERVICE OFFERINGS - CHANNELS**B103.3 Description Of Service And Rates - Interexchange (Cont'd)****B103.3.8 Series 7000 Channels¹ (Cont'd)****D.** Intrastate-Interstate System Utilizing Type 7003 or Type 7004 Channels

Where one or more, but not all of the channels in a system, are used to transmit intrastate traffic, all channels in the system are numbered for rate application, the channel having the highest total rate mileage is considered the first channel and succeeding numbered channels will be determined consecutively in order of decreasing rate mileages, and charges for the intrastate channels and associated equipment and arrangements used for the intrastate traffic are determined, in accordance with *paragraphs* B103.3.8.E.2 and 3. (T)

Note 1: Subject to Special *Terms and Conditions* in *paragraph* B103.3.8.A. (T)

B103. OBSOLETE SERVICE OFFERINGS - CHANNELS

B103.4 Rates and Charges (Cont'd)

B103.4.1 Local Channels (Cont'd)

A. Series 1000 - Sub Voice Grade Service (Cont'd)

5. Local Area Data Channels

(Obsoleted 07/02/90, Type B, Guidebook Reference Section B3.)

In consideration of the decreasing supply of metallic facilities required to provide Local Area Data Channels, the Company will convert, at the customer's request, service requiring such facilities to a Voice Grade Service or SynchroNet service and waive the nonrecurring charges associated with the change. This applies to customers where metallic facilities are being replaced with non-metallic facilities, or a customer may elect to make this change at any time prior to a modernization program that would eliminate the availability of metallic facilities. Customers will be notified 90 days prior to the elimination of metallic facilities.

Local Area Data Channels are intended for baseband transmission of digital data signals between two points on the same premises or between two different premises within the same serving wire center area, not to exceed six (6) cable route miles.

a. Provision of these channels is subject to the availability of facilities and does not envision construction of facilities expressly for this service.

b. Transmission specifications for local area data channels are dependent upon the route length of the facilities utilized to provide the service as follows:

Maximum End-To-End Facility Length In Route Mile	Maximum Insertion Loss At 1000 Hz, In dB ¹
1	9.0
2	13.5
3	17.0
4	20.0
5	23.0
6	25.5

c. Type 1180 is provided as a 2-wire interface with effective 2-wire facilities.

d. Type 1182 is provided as a 4-wire interface with effective 4-wire facilities.

B103.6 Series 10000 Channels (Entrance Facilities)

(Obsoleted 07/02/90, Type D; not available for new installations, moves or transfers. Existing customers may add channels only to the extent that they are available.)

- A. Types and Descriptions

Series 10000 channels are furnished to the customer by the Company for the purpose of extending customer-provided communications systems to a premises of the customer or authorized user, or to Centrex Control or ESSX-1 Switching Equipment serving the premises of the customer or authorized user for use at such premises. Channels are furnished for half-duplex or duplex operation on a two-point basis for service 7 days per week, 24 hours per day, for a minimum period of one month.

- 1. Type 10001 - Approximate bandwidth of 300 - 3000 cycles per second. Furnished, to the extent permitted by the normal transmission characteristics of this grade of channel, for types of transmission similar to those set forth for Series 1000 and 2000 channels.

- B. *Terms and Conditions*

In addition to the *terms and conditions* set forth in Section B2, the following *terms and conditions* apply to Series 10000 channels:

- 1. Type 10001 -The customer's or authorized user's premises must be located 25 airline miles or less from the point at which the customer-provided communications channel is connected to the Company entrance facility.

- C. Rates - Monthly Service

- 1. Type 10001

(Rates for entrance facilities will be based on the costs incurred on a case-by-case basis.)

B103. OBSOLETE SERVICE OFFERINGS - CHANNELS

B103.4 Rates And Charges (Cont'd)

B103.4.7 Optional Features And Functions (Cont'd)

C. Conditioning (Voice Grade Services)

1. Conditioning provides more specific transmission characteristics for data services. There are two types of C-conditioning and one type of D-conditioning, each with different technical specifications. C-Type conditioning controls attenuation distortion and envelope delay distortion. D-Type conditioning controls the signal to C-notched noise ratio and intermodulation distortion.

Conditioning is charged for on a per Local Channel basis for two-point and multipoint service. For two-point services the parameters apply to each service. For multipoint services the parameters apply to any path between any two service points.

2. The types and description of the available conditioning options are as follows:

Type Conditioning	Frequency Response Specification	Envelope Delay Distortion Specification
C1 (two-point or multipoint)	300-2700 Hz, -2dB to +6dB. 1000-2400 Hz, -1dB to +3dB.	1000-2400 Hz, less than 1000 microseconds
C2 (two-point or multipoint)	300-3000 Hz, -3dB to +12dB. 300-3000 Hz, -2dB to +6dB. 500-2800 Hz, -1dB to +3dB.	1000-2600 Hz, less than 500 microseconds 600-2600 Hz, less than 1500 microseconds 500-2800 Hz, less than 3000 microseconds
	C-Notched Noise	Non-Linear Distortion
D1 (two-point)	Noise level 28dB below signal level	2nd Order Distortion 35dB below signal level 3rd Order Distortion 40dB below signal level

3. When a channel is equipped with Type D1 conditioning and is utilized for voice communications, the Company does not undertake to represent that the channel will be suitable for such voice transmission.

	Monthly Rate	Nonrecurring Charge		USOC

B103.6 Series 10000 Channels (Entrance Facilities)

(M1)

(Obsoleted 07/02/90, Type D; not available for new installations, moves or transfers. Existing customers may add channels only to the extent that they are available.)

(M1)

A. Types and Descriptions

(M1)

Series 10000 channels are furnished to the customer by the Company for the purpose of extending customer-provided communications systems to a premises of the customer or authorized user, or to Centrex Control or ESSX-1 Switching Equipment serving the premises of the customer or authorized user for use at such premises. Channels are furnished for half-duplex or duplex operation on a two-point basis for service 7 days per week, 24 hours per day, for a minimum period of one month.

(M1)

1. Type 10001 - Approximate bandwidth of 300 - 3000 cycles per second. Furnished, to the extent permitted by the normal transmission characteristics of this grade of channel, for types of transmission similar to those set forth for Series 1000 and 2000 channels.

(M1)

B. Terms and Conditions

(M1)

In addition to the terms and conditions set forth in Section B2, the following terms and conditions apply to Series 10000 channels:

(M1)

1. Type 10001 -The customer's or authorized user's premises must be located 25 airline miles or less from the point at which the customer-provided communications channel is connected to the Company entrance facility.

(M1)

C. Rates - Monthly Service

(M1)

1. Type 10001

(M1)

(Rates for entrance facilities will be based on the costs incurred on a case-by-case basis.)

B103.10 Description Of Service And Rates - Customer Operating Center Service (COCS)

(T)

(Obsoleted 07/02/90, Type D; customers may continue to activate channels within their existing complement of cable pairs. Customers may also activate individual channels for Alarm Company Metallic Service as described herein.)

(M1)

B103.10.1 General

(M1)

A. Customer Operating Center Service (COCS) is designed for use by customers who utilize large quantities of local channels of the types specified in paragraph B103.10.1.K.2 between their location and the serving wire center.

(M1)

Alarm Company Metallic Service is offered between the Serving Wire Center and the alarm company's central answering bureau at the rates found in paragraph K.3. This applies to alarm companies who do not subscribe to a complement of cable pairs under COCS or who have filled their existing complement and where metallic facilities are available. Cable complement charges are not applicable to Alarm Company Metallic Service.

(M1)

B. Customer Operating Center Service is provided to customers at their option. The rates for COCS service are billed directly by the Company to the customer of COCS service.

(M1)

C. For the purposes of this Guidebook, a Customer Operating Center is defined as a customer location:

(M1)

1. owned or leased by the customer over which the customer has control and provides security.

(M1)

2. from which the customer furnishes and administers services to multiple clients in a geographical area. The term "Client" denotes a subscriber to the services offered by the owner or leasee of a Customer Operating Center.

(M1)

3. at which a system, or a group of systems, owned or leased by the customer whose operation is to receive signals and messages which are recorded, maintained, and supervised by the customer.

(M1)

4. at which the customer has regularly scheduled observers and operators and/or equipment in attendance at all times whose duties include, upon receipt of a signal or message from a client, to take such action as shall be required under the terms established by the customer for their guidance.

(M1)

D. COCS service is provided by using a complement of cable pairs in the size and length specified in paragraph B103.10.1.K.1.

E. A monthly rate applies for each complement of cable pairs of a specific size and length.

F. The customer will provide in advance a forecast of the complement of cable pairs he wishes to have planned to his use and agrees to payment of the charges for the complement of cable pairs whose airline distance is greater than 1/4 mile whether circuits are activated or not.

G. The monthly rate for each complement of cable pairs is based on the airline distance between the customer's operating center and its normal serving wire center. The maximum distance for COCS service is one and a quarter mile.

H. In addition to the monthly rate for the complement of cable pairs, a monthly rate applies for each local channel activated within the dedicated complement of cable pairs.

(M2)

B103. OBSOLETE SERVICE OFFERINGS - CHANNELS

B103.10 Description Of Service And Rates - Customer Operating Center Service (COCS) (Cont'd)

B103.10.1 General (Cont'd)

- I. Basic Termination Liability** (M)
 A basic termination liability plus special construction charges will apply for any facility placed new specifically for a customer for which no reuse is foreseen if the initial use is discontinued. (M)
 The termination liability period is 5 years. (M)
 The amount of the termination liability is equal to the estimated amount for: (M)
 - 1. Cost of the installed facilities provided including costs incurred for rearrangements of existing facilities and/or construction of new facilities as appropriate, less net salvage. Installed cost includes the cost of: (M)
 - a. equipment and materials provided or used, (M)
 - b. engineering, labor and supervision, (M)
 - c. transportation, (M)
 - d. rights of way. (M)
 - 2. Any other costs associated with the particular situation. (M)
 - 3. The maximum termination liability defined preceding is reduced by 1/60th for each month of a 5 year period that the complement of cable pairs is in service from the date it is placed in service for a specific customer. (M)
 - 4. When a customer disconnects COCS and subscribes to Telemetry Alarm Bridging Service, the basic termination liability will not apply. (M)
- J. A service charge applies for a connection move or change of each local channel activated within the complement of cable pairs. The service charges are as specified in B103.10.1.L.1.e.** (M)

L. Nonrecurring Charges

- 1. Service Charge Per Local Channel Activated

The service charge for the connection or change of each local channel activated within a complement of cable pairs is as follows:

- a. The term Service Charge as specified herein is defined as the nonrecurring charge or charges applying to the ordering, installing, rearranging and furnishing of local channels. Service charges are categorized as
 - (1) Service Ordering Charge
 - (2) Visit Charge
 - (3) Channel Connecting Charge
- b. Service Ordering Charge
 - (1) The Service Ordering Charge applies per customer request for work performed by the Company in connection with the receiving, recording and processing the customer's request for local channels to be installed at the same time.
 - (2) The term "per customer request" as specified preceding means all work or service ordered by the customer to be performed or provided at the same time. Only one service ordering charge applies when more than one local channel or types of local channels is ordered at the same time. When two or more types of local channels are ordered on the same customer request the higher charge applies.
- c. Visit Charge

A Visit Charge applies for connecting or changing Types 2463, 2464, 2230, 2261 and 2462 local channels only. Only one Visit Charge applies when more than one Type Local Channel is ordered to be provided at the same time.
- d. Channel Connecting Charge

The Channel Connecting Charge covers work associated with activating a local channel in a complement of cable pairs. The charge applies for each channel activated.

Note 1: Nonrecurring charges apply in lieu of the standard COCS multielement charges.
