1.1 Service Description

Primary Rate ISDN is an intraLATA dial-up switched digital data service that is capable of providing digital connections ranging from 64 Kbps to 1536 Kbps. Network access to Primary Rate ISDN is via fully configured ISDN primary rate interfaces (PRI). Depending on the customer's choice, Primary Rate ISDN will provide connections to the public switched telephone network as follows:

The SelectVideo option of Primary Rate ISDN Service is provisioned from a SelectVideo service node and provides ISDN PRI functionality for circuit switched digital data transport on an aggregated channel basis. Individual digital data calls may be placed or received at transmission speeds from 112 Kbps to 1536 Kbps utilizing 2 to 24 B channels. The specific rate is user-selectable on a per call basis. The capability for 56/64 Kbps connections is available on an optional basis.

The SelectData option of Primary Rate ISDN Service provides ISDN PRI functionality for digital data transport on a single channel basis. Individual calls may be placed or received at transmission speeds up to 64 Kbps.
