

1. AMERITECH AREA WIDE NETWORKING (AWN) SERVICE

A. DESCRIPTION

Ameritech Area Wide Networking (AWN) Service allows subscribers to originate calls within geographically different locations using abbreviated dialing where Ameritech is the intraLATA usage provider. The called party and the calling party may be in different Central Office switches and different telecommunication systems.

AWN operates across the public network or private facilities and can be provided to customers via Private Branch Exchange (PBX), ISDN-Direct or Basic Exchange Service.

Customers may utilize AWN with In Network Numbers or Out of Network Numbers. In Network Numbers are the telephone numbers that participate in the AWN dialing plan. Out of Network Numbers are telephone numbers of locations that may be dialed on an abbreviated basis but cannot dial back on the abbreviated basis. Out of Network Numbers may include telephone numbers that are not part of the customer's telecommunications system or that are served from areas where the service is not available.

B. TERMS AND CONDITIONS

1. Appropriate usage charges will apply to all calls routed across the public network.
2. When a PBX is included in the dialing plan, designated outgoing trunks are provisioned for the service and are dedicated to the AWN dialing plan.
3. AWN Service is furnished subject to the availability of Central Offices equipped and programmed to provide such service.
4. Some Central Office features will require dialing of the complete telephone number when the AWN feature is utilized. AWN dialing will also impact some line restrictions provided by certain Central Office features.

C. FEATURES

1. Standard Features

Dialing Plan

Two dialing plan formats are available: Extension and Custom. A combination of both dialing plans may be provided.

Extension Dialing utilizes sequential digits from the North American Numbering Plan (the seven digit telephone number) to originate a call, typically the last four digits of the telephone number.

Custom Dialing utilizes a number pattern designed by the customer and unrelated to the actual telephone number. If a Custom Dialing format is used, it is the option of the customer to define the dialing format and input all Custom Dialing numbers associated with their dialing plan.

Additional business or residence telephone numbers may be added to the abbreviated dialing plan as Out of Network Numbers designated for terminating calls only.

2. Optional Features

Call Management Reports

AWN Service provides customers call management reports without additional charge. These reports will generate daily, weekly or monthly information for the dialing plan based on originating, terminating or total dialing plan utilization. Customers may access the report feature via SMS with a customer-provided VT 100 compatible terminal.

Service Management System (SMS)

Out of Network Numbers may be administered by the customer via a customer provided VT 100 compatible terminal by accessing the Service Management System (SMS). The customer is responsible for any usage charges incurred when accessing the SMS system.
